As the fourth largest military spender in the world, India has a huge defence economy supported by a budget amounting to nearly \$67 billion in 2020–21. This book examines how well India's defence economy is managed, through a detailed statistical exposition of five key themes – defence planning, expenditure, arms production, procurement and offsets. This book is based on hard-core evidence collected from multiple government and other credible sources including the ministries of Defence, Finance, and Commerce and Industry, Comptroller and Auditor General of India and the Reserve Bank of India. It discusses key issues such as the evolution of India's defence plan; the feasibility of increasing defence spending; India's defence acquisition system; and the recent reform measures taken under the rubric of the 'Make in India' initiative. Well supplemented with original tables and figures, India's Defence Economy will be indispensable to students and researchers of defence and security studies, politics and international relations, finance, development studies, economics, strategic studies, South Asian politics, foreign policy and peace studies. It will also be of interest to defence ministry officials, senior armed forces personnel, military attachés, defence training institutes and strategic think tanks.

Government and companies have already invested hundreds of millions of dollars in the convergence of physical and logical security solutions, but there are no books on the topic. This book begins with an overall explanation of information security, physical security, and why approaching these two different types of security in one way (called convergence) is so critical in today's changing security landscape. It then details enterprise security management as it relates to incident detection and incident management. This is followed by detailed examples of implementation, taking the reader through cases addressing various physical security technologies such as: video surveillance, HVAC, RFID, access controls, biometrics, and more. This topic is picking up momentum every day with every new computer exploit, announcement of a malicious insider, or issues related to terrorists, organized crime, and nation-state threats The author has over a decade of real-world security and management expertise developed in some of the most sensitive and mission-critical environments in the world Enterprise Security Management (ESM) is deployed in tens of thousands of organizations worldwide

Manual of Psychiatric Nursing Care Planning - E-Book Elsevier Health Sciences

The most comprehensive psychiatric nursing care planning text available assists students and practitioners in providing effective care in a variety of settings. Clear presentation of information, consistent use of the nursing process, correlation of nursing and medical diagnoses, and prioritization of interventions make this text an invaluable resource. Grounded in the latest classification of the Diagnostic and Statistical Manual of Mental Disorders (DSM-IV-TR) and the most current list of NANDA-approved nursing diagnoses, this text covers a wide range of disorders, their psychopathology, and appropriate nursing interventions with rationales. Care plans use real clinical situations and include therapeutic and nontherapeutic dialogue examples to familiarize nurses with likely scenarios and equip them with the tools they need to feel confident in any clinical setting. The first chapter, *The Nursing Process*, effectively describes the central principles of psychiatric nursing practice in detailing the ANA's six-step nursing process along with additional information on therapeutic nurse-client communication skills, client history and assessment tools, NIC and NOC, and more. The six-step nursing process format is maintained throughout to emphasize a practice-oriented, problem-solving approach to psychiatric care. Major psychiatric disorders are reviewed consistently and completely with sections including Etiology, Epidemiology, Assessment and Diagnostic Criteria, Interventions, and Prognosis and Discharge Criteria. With this basis of knowledge, relevant care plans are offered in the second section of each chapter. Care plans based on DSM-IV-TR medical and NANDA nursing diagnoses are logically and consistently organized with Assessment Data, Outcome Criteria, Planning and Implementation, and Evaluation sections. Assessment Data sections include detailed related factors

(etiology) and defining characteristics or risk factors as appropriate for the specific diagnosis. Outcome Criteria sections give the reader clear indications of the desired end state. Planning and Implementation sections list specific, relevant, and practical nursing interventions with rationales in a clear, comprehensible two-column format. UNIQUE! Therapeutic and non-therapeutic dialogue examples are presented throughout to promote more effective client communication. Evaluation sections state the role of outcome evaluation as a critical and ongoing step in the nursing process. Client and Family Teaching boxes include Nurse Needs to Know and Teach Client and Family sections covering all aspects of post-treatment instructions for clients and caregivers. DSM-IV-TR boxes list all related DSM-IV-TR diagnoses for quick reference. Helpful appendices contain information and strategies that are timely and useful in the care of clients with mental and emotional disorders including such topics as psychiatric and psychosocial therapies, grief and loss, spirituality, and many more.

There is a wide spread perception amongst the intelligentsia that India lacks strategic culture. In our view, the deficiency if any perhaps lies in our reluctance to articulate our perceptions on strategic issues, as also to formulate a long term strategic view. As the oldest think tank in Asia, we decided to address the above issue and how we could contribute to evolution and dissemination of strategic thought on challenges facing the Nation. To this end the publication of a USI Strategic Yearbook 2016, which was our maiden attempt, received wide appreciation for its quality and contents. This current issue of the Yearbook contains series of articles by eminent persons and experts on various aspects of national security ; the aim being to provide a strategic perspective which will create awareness and also help the policymakers in giving a strategic direction for India to transform into a developed society and a secured nation. We hope that readers will find this publication useful and interesting. We would welcome suggestions for improvement of subsequent issues.

FUNDAMENTALS OF NURSING - E-BOOK

Elsevier Health Sciences

This ground-breaking book offers an extensive legal analysis-grounded in public, EU, and international law-of arms trade regulation, integrated with insights drawn from international relations. The sale of weapons and related technologies is, globally, one of the most politically controversial and ethically contentious forms of commerce. Intimately connected with sustaining repressive governments and violations of international human rights and humanitarian law, arms exports are also a central element in the economic and strategic policies of the governments of all large industrial states. They have also been the source of abundant corruption, and of serious challenges to the norms and effectiveness of constitutional accountability in democratic states. On paper, the arms trade is heavily regulated: national legislation and international treaties are in place which purport to prohibit certain transactions and limit others. Yet despite its importance, legal and international relations scholarship on the subject has been surprisingly limited. This book fills this gap in the literature by examining and comparing the export control regimes of eight leading nations - USA, Russia, the UK, France, Germany, Sweden, China, and India - with chapters contributed by leading experts in the field of law and international relations.

The last two years have witnessed deterioration in the global security situation characterised by increasing tensions among major powers. The threat perceptions of the US, China and Russia vis-à-vis each other have sharpened. There is stiff competition among them to dominate the strategic space in different parts of the world. This has led them to formulate national security strategies which are more assertive, aggressive and competitive. There is lack of consensus in resolution of conflicts in Afghanistan and Syria. There is no concerted effort in meeting the challenge of the Islamic State. It is in this fractured security environment that India has been making special efforts to project itself as a leading power commensurate with its economic and military potential. This fifteenth volume of India's National Security Annual Review undertakes an incisive analysis of India's endeavours to maximise its gains with respect to its strategic partners. The volume also focuses on the new dynamism that India has injected in its relations with countries in the Middle East and the Asia Pacific. India's threat perceptions in its extended security zone, critical

aspects of its strategic preparedness and complex issues regarding its internal security have been thoroughly examined. With contributions from experts from the fields of diplomacy, academia and civil and military services, the book will be one of the most dependable sources of analyses for scholars of international relations, foreign policy, defence and strategic studies, and political science, and practitioners alike.
