Since the beginning of the century, electrical goods have invaded our everyday lives. Now, electric power is coming to be seen as a solution to the pollution caused by cars. While this transition has remained very slow during the last ten years, it has been accelerating as the statutory constraints and needs of the market have changed. Even if the electric car itself fails to dominate the market, electric traction is taking an important place in our drive to move away from gas-powered vehicles. Another solution, hybrid vehicles, combine two sources of energy (electric and chemical), reducing the global consumption of fossil fuels. Fuel cell vehicles are also one of the most promising technologies for the future, with the capacity to use any fuel - hydrogen being the ideal fuel ecologically, but constrained by infrastructure and storage issues. This book explores all these different solutions for moving our vehicles from fossil fuel consumption to new, more environmentally-friendly power sources.

Cadogan explores "Green Spain"--the country's rich, lush alternative to the dusty and dry south, from La Rioja, famed for its wine, to the serene beaches of Galicia. Spain experts Facaros and Pauls reveal the best of Cantabria, with its international arts festival; the lively summer resort of Santander; and the prehistoric art of the Puento Viesgo Caves and nose out Spain's finest Visigothic architecture in Castile and León. The guide takes visitors to the sights of this increasingly popular region, beginning with the haunted pass at Roncesvalles, and continuing through boisterous Pamplona and glamorous San Sebastián. The authors pick out a trail of extraordinary Romanesque churches, and finish at the great granite shrine of Santiago de Compostela; the end point of the world-famous pilgrimage. Cadogan provides expert guidance on canoeing, fishing, and diving in the rapids of the Asturias and around the Bay of Biscay, as well as golfing in Gijón. Bursting with travel and practical information, rich history and culture chapters, and a detailed food section, Cadogan provides all the necessities to make the most of this beautiful region. Derived from the renowned multi-volume International Encyclopaedia of Laws, this monograph provides a survey and analysis of the rules concerning Intellectual Property Law in Colombia. It covers every type of intellectual property right in depth - copyright and neighbouring rights, patents, utility models, trademarks, trade names, industrial designs, plant variety protection, chip protection, trade secrets, and confidential information. Particular attention is paid throughout to recent developments and trends. The analysis approaches each right in terms of its sources in law and in legislation, and proceeds to such legal issues as subject matter of protection, conditions of protection, ownership, transfer of rights, licences, scope of exclusive rights, limitations, exemptions, duration of protection, infringement, available remedies, and overlapping with other intellectual property rights. The book provides a clear overview of intellectual property legislation and policy, and at the same time offers practical guidance on which sound preliminary decisions may be based. Lawyers representing parties with interests in Intellectual Property Law in Colombia will welcome this very useful guide, and academics and researchers will appreciate its value in the study of comparative intellectual property law.

Services Marketing Management builds on the success of the previous editions, formally entitled 'The Management and Marketing of Services', to provide an easily digestible approach to the service industry with a specific focus on the management and

marketing elements. This new edition has been thoroughly revamped to include pedagogical features such as exercises and mini cases throughout the text to consolidate learning and make it more student friendly. New content has been incorporated to bring the subject matter thoroughly up to date, for example featuring more on the Internet, the inclusion of material on call centres in respect of service delivery and service encounter; additional material on customer relationship management (CRM); consideration of frontline employees and internal marketing; and a discussion of revenue management issues in managing demand and capacity. Particularly suitable for students on marketing, business and hospitality courses who require a good grounding in the principles of services marketing, the practical implications are shown clearly and effectively demonstrate how the principles are applied in the real world. A web based lecturer resource accompanies the text.

### INTELLECTUAL PROPERTY LAW IN COLOMBIA

Plunkett Research, Ltd.

Michel Depraz, un chercheur, rejoint une startup qui développe les capacités de l'intelligence artificielle, Turing Technologie... Rien ne destinait le chercheur Michel Depraz à intégrer une startup dédiée à l'intelligence artificielle. En quelques mois, Turing Technologie multiplie des innovations qui bouleversent l'économie, créent un chômage de masse et le début de soulèvements sociaux. Soucieux de s'approprier l'origine de cette réussite technologique, l'Élysée ne tarde pas à approcher la startup afin de s'assurer la suprématie quantique, avant la Chine et les États-Unis. Devenue l'égale des GAFAs, Turing Technologie va créer InGA, la première intelligence artificielle générale: une machine quantique capable d'apprentissage, de créativité, de raisonnements abstraits. Bref, une entité capable de résoudre et même d'anticiper n'importe quel problème. Mais InGA est-elle encore une machine? Le mythe de Faust à l'heure de l'intelligence artificielle. Dans ce récit de science-fiction fascinant, Turing Technologie crée la première machine quantique capable d'apprentissage, de créativité et de raisonnements abstraits, l'InGA. Une invention qui ne sera pas sans dangers... EXTRAIT — Faut vraiment que j'file, a marmonné le chauffeur. Le type avait l'air très inquiet. Il faut dire que la route avait été épouvantablement déserte et que sur France Info les nouvelles étaient effroyables. Un peu partout, des événements se produisaient : les infrastructures s'effondraient les unes après les autres ; les villes étaient ravagées par des émeutes sanglantes, et ce qu'il restait des forces armées n'arrivait plus à les contenir. Je l'ai dévisagée un moment : elle était immobile, plus pâle qu'un mort vivant. Elle avait une expression que j'ai d'abord prise pour

de la sévérité avant de me rendre compte qu'elle était en réalité habitée d'une terreur d'une telle intensité qu'elle n'arrivait pas à la dissimuler complètement. Je lui ai pris son téléphone et j'ai retiré la batterie avant de tout envelopper dans du papier d'aluminium. Elle m'a regardé faire sans protester, la gorge serrée. Un instant, j'ai cru qu'elle allait se remettre à sangloter. De toutes les émotions humaines, la vraie terreur est de loin la plus invalidante. Elle affecte les glandes endocrines qui se mettent alors à déverser dans le sang toute une flopée de molécules organiques qui font se contracter les muscles, accélèrent le rythme cardiaque et surtout épuisent le corps et l'esprit.
