The Rights Turn in
Conservative Christian
Politics documents a
recent, fundamental
change in American
politics with the waning of
Christian America. Rather
than conservatives
emphasizing morality and
liberals emphasizing
rights, both sides now
wield rights arguments as
potent weapons to win
political and legal battles
and build grassroots
support. Lewis documents
this change on the right,
focusing primarily on
evangelical politics. Using
extensive historical and
survey data that
compares evangelical
advocacy and evangelical
public opinion, Lewis
explains how the
prototypical culture war
issue - abortion -
motivated the
conservative rights turn

over the past half century,
serving as a springboard
for rights learning and
increased conservative
advocacy in other arenas.
Challenging the way we
think about the culture
wars, Lewis documents
how rights claims are
used to thwart liberal
rights claims, as well as to
provide protection for
evangelicals, whose
cultural positions are
increasingly in the
minority; they have also
allowed evangelical elites
to justify controversial
advocacy positions to
their base and to engage
more easily in broad
rights claiming in new or
expanded political arenas,
from health care to capital
punishment.

In *Ethics for Evaluation* the diverse perspectives on ethical guidance in evaluation are untangled and ordered in a theoretical framework focusing on evaluations doing no harm, tackling bad and doing good. Divided into four parts a diverse group of subject experts present a practical look at ethics, utilizing practical experience to analyze how ethics have been applied in evaluations and how new approaches can shape the future of ethics. The chapters collectively create a common understanding of the potential role of ethics to infuse policy decisions and stakeholder initiatives with evaluations that provide better insight and potential solutions for problems, going beyond "what works" to what needs to be done and what would help. The methodological scope ranges from working in contexts of fragility, conflict and violence, to participatory and decolonized approaches, including the ethical imperatives posed by global crises such as climate change, inequity and exploitative international relations. *Ethics for Evaluation* presents evaluators,

commissioners of evaluation, policymakers and practitioners with inspiration for an ethical perspective on how evaluation can contribute towards solving problems. It presents a solid foundation for inclusive terminology and ethics guidance that would be the heart of a global exercise in professionalization of ethical evaluation practice.

From the USA TODAY bestselling author of *Behind Every Lie* and *The Night* Olivia Fell comes an unforgettable and heart-wrenching novel about the lengths one woman will go to save her son. Emma loves her life. She's the mother of a precocious kindergartener, married to her soulmate—a loyal and loving police detective—and has a rewarding career as a doctor at the local hospital. But everything comes crashing down when her son, Josh, is diagnosed with a rare form of cancer. Determined to save him, Emma makes the risky decision to sell opioids to fund the life-saving treatment he needs. But when somebody ends up

dead, a lethal game of cat and mouse ensues, her own husband leading the chase. With her son's life hanging in the balance, Emma is dragged into the dark world of drugs, lies, and murder. Will the truth catch up to her before she can save Josh? A timely and moving exploration of a town gripped by the opioid epidemic, and featuring Christina McDonald's signature "complex, emotionally intense" (Publishers Weekly) prose, *Do No Harm* examines whether the ends ever justify the means...even for a desperate mother.

Love Does No Harm Harper Collins

This book discusses the common principles of morality and ethics derived from divinely endowed intuitive reason through the creation of al-fitr' a (nature) and human intellect (al-'aql).

Biomedical topics are presented and ethical issues related to topics such as genetic testing, assisted reproduction and organ transplantation are discussed. Whereas these

natural sources are God's special gifts to human beings, God's revelation as given to the prophets is the supernatural source of divine guidance through which human communities have been guided at all times through history. The second part of the book concentrates on the objectives of Islamic religious practice - the maqa' sid - which include: Preservation of Faith, Preservation of Life, Preservation of Mind (intellect and reason), Preservation of Progeny (al-nasl) and Preservation of Property. Lastly, the third part of the book discusses selected topical issues, including abortion, assisted reproduction devices, genetics, organ transplantation, brain death and end-of-life aspects. For each topic, the current medical evidence is followed by a detailed discussion of the ethical issues involved.

Closing the Gap On Police Reform What if you could change your organizational culture to reduce or eliminate the use of excessive force, improve morale, and generate loyalty, service, and outstanding performance - all while

creating greater community support of your department? You can. Former Police Chief Ramon Batista and Executive Coach Mark D Ziska have a proven 5-step solution that works to change the culture, performance, and character of any size department, agency, or small or large business. Using the proven process of a strategic plan with a well-defined launch strategy Batista and Ziska have shown that "retraining" the police isn't as powerful as changing the culture, hiring for character, and following a well-defined plan that recognizes, celebrates, and rewards character, values, and performance. They also explain why well-defined performance standards, organizational values that are lived, not parroted, and hiring men and women who show a "heart of service," for their community is critical to every police department, law enforcement agency, or large or small business. Ramon Batista holds a Bachelor of Science degree in Public Safety and Homeland Security and a Master of Science degree in Leadership from Grand Canyon University. The former Police Chief

for Mesa, AZ PD, has participated in the Police Executive Leadership Institute, PERF; Senior Management Institute for Police Federal Bureau of Investigation National Academy and many other organizations. Mark D Ziska is currently the Chair of the Arizona State Personnel Board as the human resource industry representative to the five member state board. He's also the former Senior Director (VP) of Human Resources for Raytheon-leader of the world's leading developer and manufacture of advanced missile and directed energy systems. When Matthew Preston was eight, his father was shot and killed in rarefied Pacific Palisades by Ted Nash, a home burglar who happened to be the Preston's neighbor. Though Nash was sentenced to life in San Quentin, Matthew's lifelong obsession is to somehow get into the prison, gain access to Nash, and exact the ultimate personal revenge. He devises a

plan to become a prison doctor to gain access to Nash. While in medical school, Matthew falls for brilliant classmate Torrey Jamison from poverty-stricken East Palo Alto. Torrey is battling her own demons, having been raped by a school counselor while in high school. Matthew is focused on vigilantism; but he loves Torrey who is morally opposed to killing for any reason-or so she thinks. Unique backdrops at Stanford Medical School and San Quentin prison highlight this tension-filled suspense novel, which includes surprising twists, and themes of misogyny, crime victims' rights, and government corruption.

In *First Do No Harm*, David Gibbs raises basic questions about the humanitarian interventions that have played a key role in U.S. foreign policy for the past twenty years. Using a wide range of sources, including government documents, transcripts of international war crimes trials, and memoirs, Gibbs shows how these interventions often heightened violence and

increased human suffering. The book focuses on the 1991-99 breakup of Yugoslavia, which helped forge the idea that the United States and its allies could stage humanitarian interventions that would end ethnic strife. It is widely believed that NATO bombing campaigns in Bosnia and Kosovo played a vital role in stopping Serb-directed aggression, and thus resolving the conflict. Gibbs challenges this view, offering an extended critique of Samantha Power's Pulitzer Prize-winning book, *A Problem from Hell: America in the Age of Genocide*. He shows that intervention contributed to the initial breakup of Yugoslavia, and then helped spread the violence and destruction. Gibbs also explains how the motives for U.S. intervention were rooted in its struggle for continued hegemony in Europe. *First Do No Harm* argues for a new, noninterventionist model for U.S. foreign policy, one that deploys nonmilitary methods for addressing ethnic violence. *First Do No Harm*

The 2017 National Book Critics Circle (NBCC) Finalist, International Bestseller, and a Kirkus Best Nonfiction Book of 2017! "Marsh has retired, which means he's taking a thorough inventory of his life. His reflections and recollections make *Admissions* an even more introspective memoir than his first, if such a thing is possible." —The New York Times "Consistently entertaining...Honesty is abundantly apparent here--a quality as rare and commendable in elite surgeons as one suspects it is in memoirists." —The Guardian "Disarmingly frank storytelling...his reflections on death and dying equal those in Atul Gawande's excellent *Being Mortal*." —The Economist Henry Marsh has spent a lifetime operating on the surgical frontline. There have been exhilarating highs and devastating lows, but his love for the practice of neurosurgery has never wavered. Following the publication of his

celebrated New York Times bestseller *Do No Harm*, Marsh retired from his full-time job in England to work pro bono in Ukraine and Nepal. In *Admissions* he describes the difficulties of working in these troubled, impoverished countries and the further insights it has given him into the practice of medicine. Marsh also faces up to the burden of responsibility that can come with trying to reduce human suffering. Unearthing memories of his early days as a medical student, and the experiences that shaped him as a young surgeon, he explores the difficulties of a profession that deals in probabilities rather than certainties, and where the overwhelming urge to prolong life can come at a tragic cost for patients and those who love them. Reflecting on what forty years of handling the human brain has taught him, Marsh finds a different purpose in life as he approaches the end of his professional career and a fresh understanding of what matters to us all in the end.

 At the outset of World War I - the "Great War" - Freud supported the Austro-Hungarian Empire for which his sons fought. But the cruel truths of that bloody conflict, wrought on the psyches as much as the bodies of the soldiers returning from the battlefield, caused him to rethink his stance and subsequently affected his theory: Psychoanalysis, a healing science, could tell us much about both the drive for war and the ways to undo the trauma that war inherently breeds, but its principles could just as easily serve the enemy's desires to inculcate its own brand of "truth." Even a century later, psychoanalysis can still be used as much for the justifications of

warfare and propaganda as it is for the defiance of and resistance to those same things. But it is in the investigation of the motives and methods behind these uses that psychoanalysis proves its greatest strength. To wit, this edited collection presents published and unpublished material by analysts, writers, and activists who have worked at the front lines of psychic life and war from various stances. Set at a point of tension and contradiction, they illustrate the paradoxical relation of psychoanalysis as both a site of resistance and healing and a necessary aspect of warmaking, propaganda, and militarism. In doing so, we venture from the home front - from the trauma of returning veterans to the APA's own complicity in CIA "black sites" - across international borders - from the treatment of women in Latin American dictatorships to the resistance to occupation in Palestine, from mind control to an ethics of responsibility. Throughout, a psychoanalytic sensibility deconstructs the very opposition that it inhabits, and seeks to reestablish psychoanalysis as the

healing discipline it was conceived to be.

One unsolved murder. A best friend determined to right the wrongs of the past. On the 21st August Tabitha Rice disappeared without a trace. All the signs point to murder, but no signs point to a murderer. The easiest answer is her husband, Rick. But he protests his innocence and there is little proof he is the murderer. Annabella knows there is more to the story than what the police are telling. Tabitha was her best friend and she vows to uncover the truth. As Annabella delves further into the past, she uncovers sides to Tabitha that she never saw coming, and she finds herself asking the question... Was this murder? Or is there more to Tabitha Rice's story than meets the eye? Perfect for fans of Louise Candlish, *The Silent Patient* and *Blood Orange*. [Do No Harm](#) John Wiley & Sons

Medical mistakes are more pervasive than we think. How can we improve outcomes? An acclaimed MD's rich stories and research explore patient safety. Patients enter the medical system with faith that they will receive the best care possible, so when things go wrong, it's a profound and painful breach. Medical science has made enormous strides in decreasing mortality and suffering, but there's no doubt that treatment can also cause harm, a significant portion of which is preventable. In *When We Do Harm*, practicing physician and acclaimed author Danielle Ofri places the issues of medical error and patient safety front and center in our national healthcare conversation. Drawing on current research, professional experience, and extensive interviews with nurses, physicians, administrators, researchers, patients, and families, Dr. Ofri explores the diagnostic, systemic, and cognitive causes of medical error. She advocates for strategic use of concrete safety interventions such as checklists and improvements to the electronic medical record, but focuses on the full-

scale cultural and cognitive shifts required to make a meaningful dent in medical error. Woven throughout the book are the powerfully human stories that Dr. Ofri is renowned for. The errors she dissects range from the hardly noticeable missteps to the harrowing medical cataclysms. While our healthcare system is—and always will be—imperfect, Dr. Ofri argues that it is possible to minimize preventable harms, and that this should be the galvanizing issue of current medical discourse.

Ethics for Evaluation

Martinus Nijhoff Publishers
Book 2 in the award-winning *Medical Students* series From busy hospitals in San Diego to the barren deserts of Arizona, this tension-filled thriller, the second installment of *The Medical Students* series, follows the life and death challenges, the surprising twists and turns, and the ethical dilemmas of two young doctors in their quest to rid the profession of bad doctors who practice bad medicine resulting in bad outcomes. Book One, *Do No Harm*, introduced Torrey Jamison and Matthew Preston. Torrey, with her genius IQ, gained acceptance to Stanford

Medical School to pursue her dream of becoming a pediatric neurosurgeon in honor of her little sister, Leia, who died of brain cancer. At Stanford, she met her future husband, Matthew, who pursued medical school for the sole purpose of becoming a prison doctor in order to gain access to-and kill-his father's murderer who was incarcerated in San Quentin. As their relationship deepened, Torrey was forced to confront the potential value and moral ambiguity of vigilantism. In this page-turning, stand-alone suspense sequel, *Bad Medicine*, newlyweds Torrey and Matthew have graduated from medical school and are now new doctors at Kaiser hospital in San Diego. While there, they learn of a friend's young niece who has fallen victim to a doctor who is running a phony cancer treatment center. Putting their careers and marriage in jeopardy, Dr. Jamison and Dr. Preston agree to help their friend's family seek the ultimate revenge.

MAKING SENSE OF CANADIAN HEALTH REFORM

Simon and Schuster
"Crammed with provocative insights, raw emotion, and heartbreaking dilemmas," (The New York Times)
First, Do No Harm is a powerful examination of how life and death decisions are made at a major metropolitan hospital in Houston, as told through the stories of doctors, patients, families, and hospital administrators facing unthinkable choices. What is life worth? And when is a life worth living? Journalist Lisa Belkin examines how these questions are asked and answered over one dramatic summer at Hermann Hospital in Houston, Texas. In an account that is fascinating, revealing, and

almost novelistic in its immediacy, Belkin takes us inside a major hospital and introduces us to the people who must make life and death decisions every day. As we walk through the hallways of the hospital we meet a young pediatrician who must decide whether to perform a risky last-ditch surgery on a teenager who has spent most of his fifteen years in a hospital; we watch as new parents battle with doctors over whether to disconnect their fragile, premature twins from the machine that keeps them breathing; we are in the operating room as a poor immigrant, paralyzed from a gunshot in the neck, is asked by doctors whether or not he wishes to stay alive; we witness the worry of a kidney specialist as he decides whether or not to transfer an uninsured baby to the county hospital down the road. We experience critical moments in the lives of these real people as Belkin explores challenging issues and questions involving medical ethics, human suffering, modern technology, legal liability, and financial reality. As medical technology advances, the choices grow more complicated.

How far should we go to save a life? Who decides? And who pays?
Humanitarian Intervention and the Destruction of Yugoslavia Lynne Rienner Publishers
 T. A. Cavanaugh's Hippocrates' Oath and Asclepius' Snake: The Birth of the Medical Profession articulates the Oath as establishing the medical profession's unique internal medical ethic - in its most basic and least controvertible form, this ethic mandates that physicians help and not harm the sick. Relying on Greek myth, drama,

and medical experience (e.g., homeopathy), the book shows how this medical ethic arose from reflection on the most vexing medical-ethical problem -- injury caused by a physician -- and argues that deliberate iatrogenic harm, especially the harm of a doctor choosing to kill (physician assisted suicide, euthanasia, abortion, and involvement in capital punishment), amounts to an abandonment of medicine as an exclusively therapeutic profession. The book argues that medicine as a profession

necessarily involves stating before others what one stands for: the good one seeks and the bad one seeks to avoid on behalf of the sick, and rejects the view that medicine is purely a technique lacking its own unique internal ethic. It concludes noting that medical promising (as found in the White Coat Ceremony through which U. S. medical students matriculate) implicates medical autonomy which in turn merits respect, including honoring professional conscientious objections.
