Sheehy's Manual of Emergency Care - E-Book Elsevier Health Sciences

Part of the popular Saunders Nursing Survival Guide series, this book prepares you to manage the most common health care problems you'll see in critical care, trauma, or emergency settings. Each chapter is organized from the most immediate and life-threatening conditions to less emergent critical care conditions. Its lighthearted, cartoon-filled approach simplifies difficult concepts, covering each body system in terms of current practice standards. Consistent headings break content into four

succinct areas of review: What (subject) IS, What You NEED TO KNOW, What You DO, and Do You UNDERSTAND? Clinical terms and shorthand expressions are highlighted, exposing you to terminology used in the hospital setting. A color insert illustrates concepts and principles of critical care and emergency nursing, including various complications Mnemonic devices aid your memory and interactive activities help you learn, with exercises including fill in the blank, matching, word jumbles, true/false, and crossword puzzles. Special icons help you focus on vital information: Take Home Points help you prepare for clinical rotations. Caution notes alert you to dangerous conditions and how to avoid them. Lifespan notes point out age-related variations in signs and symptoms, nursing interventions, and patient teaching. Culture notes cite possible variations related to

a patient's cultural background. Web links direct you to Internet resources for additional research and study. What You WILL LEARN learning objectives help you identify quickly the content covered and goals for each chapter. NCLEX-style examination-style review questions at the end of each chapter allow you to test your understanding of content and practice for the Boards. Cartoon characters with brief captions help to better explain difficult concepts. Margin notes are streamlined for ease of use and effectiveness. Content updates reflect current practice and emergent situations, including increased focus on disaster preparedness, code management, updated ACLS guidelines, and hypertension.

Emergency Nursing Core Curriculum McGraw-Hill/Appleton & Lange

This highly practical, problem-oriented handbook is intended for medical and nursing staff who work with critically ill patients, particularly in an intensive care setting. It offers a pathophysiological basis for understanding the hour-by-hour management of the critically ill. The major part of the book is organised around general clinical issues that are common to all patients in intensive care, including; fluid therapy, sedation and analgesia, monitoring, multiorgan failure and acute cardiovascular and respiratory failure. Later chapters are devoted to specific problems relating to particular organ systems, and to the special issues of paediatric and obstetric critical care. This compendium of detailed practical advice is accompanied by an exploration of ethical problems, quality assurance and questions of outcome. Many informative figures and tables are included, and 'trouble-shooting' sections address common clinical dilemmas in intensive care. Designed for regular use and rapid consultation, it is the one reference all clinicians in intensive care will need.

Accident & Emergency: Theory into Practice is the comprehensive

textbook for emergency nurses, covering the full range of emergency care issues, including trauma management and trauma care, the lifespan, psychological issues, physiology for practice, practice and professional issues. This book is about more than what a nurse should do; it is about why it should be done, leading to sustainable and safer practice. The third edition of this ever-popular text expands its horizons to include contributions from emergency care professionals in New Zealand, Australia and the Republic of Ireland, as well as the United Kingdom. Applied anatomy and physiology and how it changes in injury and ill health Treatment and management of a wide range of emergency conditions Includes emergency care across the life continuum, trauma management, psychological dimensions and practice and professional issues. 'Transportation of the critically ill patient' chapter outlines the nursing and operational considerations related to transportation of the acutely ill person. 'Creating patient flow' chapter overviews the concepts behind patient flow across the wider health system and introduces the key concept of staff and patient time. It explores some of the techniques used in manufacturing and service industries and its application to health system, illustrating how to reduce the waste of patient and staff time. 'Managing issues of culture and power in ED' chapter demonstrates that cultural awareness is about much more than recognising the different religious needs of patients and their families; it's also about recognising culture, diversity, stereotyping and expressions of power. Updated to reflect the latest practice and guidelines in this fast-changing field of practice.
