A touching, romantic tale of new attraction and old loyalties. Jeanie is on the brink of turning sixty, and the man she's been married to for more than half of her life has suddenly abandoned their marital bed. Jeanie is deeply hurt and very confused: Has she done something wrong? Is he in love with someone else? Her pained bewilderment turns to anger as he remains unable, or unwilling, to provide

answers. The bright spot of Jeanie's week is Thursday, the day she takes her granddaughter to the park. There, one day, she meets Ray--age-appropriate, kind-hearted, easygoing, and downright sexy. In short, he is everything that George is not. As her relationship with Ray begins to blossom and she begins to think that her life might hold in store a bold second act, she begins to wonder if she has the courage to take a step off the precipice of routine and duty and into the

swirling winds of
romance.

Such is the pressure on teaching time in schools and universities that students are taught less and less of the diversity that is life on this planet. Most students, and indeed most professional

biologists that these students become, know far more of cell function than of biodiversity. This text is a profusely illustrated, quick-reference guide to all types of living organisms, from the single-celled prokaryotes and eukaryotes to the multicellular fungi, plants and animals. All surviving phyla and their component classes are characterised and described, as are their lifestyles, ecology, relationships, and within-group diversity (with

orders displayed in list form). Overall, the book's aim is to provide biologists and others with a clear, concise picture of the nature of all groups of organisms with which they may be unfamiliar. *Clinical Procedures in Veterinary Nursing* John Wiley & Sons
