2020 has been a  
challenging year  
worldwide for many  
businesses and we have  
not come out of that  
phase entirely in 2021. At  
the same time, we  
witnessed the  
acceleration of Cloud led  
Digital Transformation,  
changing the ways we  
work, communicate,  
collaborate, and share our  
workspace and creating a  
globally accepted new  
normal. More than ever  
before, senior  
management and  
leadership teams need to

identify a rigorous approach, drive competitive advantage for their business, create value addition, and become more effective in this work from home, zoom-based collaboration and still achieve our business metrics, which have also naturally evolved due to the global pandemic. Effective disruption is dependent on fast universal adoption, then only it will be real and the transformation will be effective. Understanding the key drivers of change,

leveraging the powerful capabilities from technologies with a collaborative platform can aid an organization to prepare for digital transformation. Building a Digital Future provides a clearly defined roadmap for executing this change. Based on their industry experience of leading and implementing digital transformation globally, authors Lipi Sarkar and Vinnie Bansal distil proven ideas, creating a blueprint of powerful and workable frameworks for executing a successful digital

transformation with Dynamics 365 and accelerating businesses during a global pandemic. Each chapter of the book is curated with best practices, real life examples, pitfalls to avoid, and salient points to remember. This book enables organizations to truly embrace the benefits of digital transformation by anchoring Microsoft Dynamics 365 and Power Platform at the core of their business. The frameworks, examples and customer stories in the book revolves around

how it drives faster disruption, enhances customer experiences, empowers overworked business users. The real-life customer stories across various sectors and countries (namely Virgin Atlantic, Etihad Airways, G&J Pepsi-Cola Bottlers, Breville, Heathrow Airport, Hickory Farms, Ste Michelle Wines and many more) brings an idea of key business challenges and the solutions implemented to address them. Building a Digital Future is written for C-suite stakeholders, senior

management, Programme Directors or Managers, Implementation Consultants, and Business Managers who are considering a Digital Transformation to improve efficiencies across the business of finance and operation, supply chain, retail, and customer relationship management--sales, marketing, or services. This book covers Digital Transformation with the powerful technology platform Microsoft Dynamics 365 which offers process capabilities

across all business areas, provides powerful tools to automate time-consuming tasks, and drives innovation and improvements through an evergreen system post implementation. The concepts of digital transformation are laid out and take you through a step-by-step transformation journey, highlighting any pitfall that you need to be aware of. Many Dynamics 365 books offer advice for implementation or mastering the system, but Building a Digital Future is

the first complete playbook of how businesses can transform to thrive in the digital age. Building a Digital Future is the must-have guide to help your Dynamics 365 program.

Messages from business applications can be

transformed, augmented and routed to other business applications. The types and complexity of the integration required will vary by company, application types, and a number of other factors. Processing logic in WebSphere Message Broker is implemented using message flows. Through message flows, messages from business applications can be transformed, augmented, and routed to other business applications. Message flows are created by connecting

nodes together. A wide selection of built-in nodes are provided with WebSphere Message Broker. These nodes perform tasks that are associated with message routing, transformation, and enrichment. Message flows are created and tested using the Message Broker Toolkit, a sophisticated, easy-to-use programming tool that provides a full range of programming aids. This IBM® Redbooks® publication focuses on two specific integration requirements that apply

to many midmarket companies. The first is the ability to use WebSphere Message Broker to integrate Microsoft.NET applications into a broader connectivity solution. WebSphere Message Broker V8 introduces the ability to integrate with existing Microsoft .NET Framework applications. A .NET assembly can be called from within a message flow and the WebSphere Message Broker runtime can host and run .NET code. Solutions explored in this book cover

connectivity to applications using Windows Communications Framework (WCF), Microsoft Message Queuing, Microsoft Dynamics CRM, and other Microsoft applications. The second is the ability to integrate WebSphere Message Broker with file transfer networks, specifically with WebSphere MQ File Transfer Edition and IBM Sterling Connect Direct. This book develops a broad range of knowledge in ERP implementation and usage for textile and apparel vertical. Covered are two major areas in ERP: the basics about ERP and the technology and functioning of it and usage of ERP for textile and apparel vertical specifically. Also addressed are concerns of the industry, mainly on how to select the ERP, what to expect from ERP, and how it will be

beneficial to the industry.

**Get up and running with Microsoft Dynamics NAV** Pearson Education  
ERP Systems for Manufacturing Supply Chains: Applications, Configuration, and Performance provides insight into the core architecture, modules, and process support of ERP systems used in a manufacturing supply chain. This book explains the building blocks of an ERP system and how they can be used to increase performance of

manufacturing supply chains. Starting with an overview of basic concepts of supply chain and ERP systems, the book delves into the core ERP modules that support manufacturing facilities and organizations. It examines each module's structure and functionality as well as the process support the module provides. Cases illustrate how the modules can be applied in manufacturing environments. Also covered is how the ERP modules can be configured to support

manufacturing supply chains. Setting up an ERP system to support the supply chain within single manufacturing facility provides insight into how an ERP system is used in the smallest of manufacturing enterprises, as well as lays the foundation for ERP systems in manufacturing organizations. The book then supplies strategies for larger manufacturing enterprises and discusses how ERP systems can be used to support a complete manufacturing

supply chain across different facilities and companies. The ERP systems on the market today tend to use common terminology and naming for describing specific functions and data units in the software. However, there are differences among packages. The book discusses various data and functionalities found in different ERP-software packages and uses generic and descriptive terms as often as possible to make these valid for as many ERP systems as

possible. Filled with insight into ERP system's core modules and functions, this book shows how ERP systems can be applied to support a supply chain in the smallest of manufacturing organizations that only consist of a single manufacturing facility, as well as large enterprises where the manufacturing supply chain crosses multiple facilities and companies.
