From the smallest seeds to the tallest trees, this beautiful children's guide is a must-have for any budding botanist or plant lover. We can't live without plants. We need them for food, shelter, even the air we breathe, yet we know surprisingly little about them. Why do thistles bristle with spines? How do some plants trap and eat insects? Did you know there are trees more than 5,000 years old? Trees, Leaves, Flowers & Seeds explores the mysterious world of plants to find the answers to these and many more questions. This picture-packed encyclopedia shows a wonderful variety of plants, from fantastic ferns to spiky cacti. It explores the diverse habitats of plants, herbs and spices that make our food tasty, and even how astronuat grow plants in space. It also takes a fun, more sideways look at some truly weird and wonderful plants, including leaves that are home to frogs, orchids that look like parrots, and seeds that spin like helicopters. So open this fascinating ebook and find out more about the amazing world of trees, leaves, flowers, and seeds.

Even great gardeners like Monty Don are always learning and always experimenting. This extensively revised new edition of his Complete Gardener, first published in 2003, brings you right up-to-date on how Monty gardens today - and his recommendations for you. The most comprehensive, practical, and highly illustrated ebook Monty has ever written, it covers what he believes are the most important aspects of gardening. Organic techniques have always been at the core of his practice, but this new edition picks up on another key principle: the need to provide habitats in your garden for local wildlife. Over half of the photographs in this new edition will be new, taken over a year in his Long Meadow garden, and he is going through the text with a fine-tooth comb to ensure everything he says reflects his latest approach.

Flowers have been a universal cultural object for millennia. They are an important aesthetic element in everyday life worldwide, and have played a highly symbolic role in art throughout the ages. Over the past few years, Makoto Azuma has created a furor in the art world with his floral installations, in which he creates unusual new shapes from plants and flowers and their component parts. Inspired by the Japanese tradition of ikebana--the art of flower arranging--Azuma creates novel and previously unseen aesthetics by bringing together unusual plants that wouldn't usually meet in nature--some of them exotic --in extraordinary arrangements. Shunsuke Shiinoki, who opened the "haute-couture" florists Jardin des Fleurs in Tokyo in 2002 in association with Makoto Azuma, captured these exceptional floral installations in extraordinary photographs.

The 15000 plants featured in this encyclopedia have been selected by consultants from the UK, North America and Europe. They include not only tried and tested garden favourites, but also a selection of unusual species and cultivars. The plants are arranged alphabetically by botanical name. Common names are cross-referenced throughout, enabling plants to be found easily, even if the botanical name is unfamiliar. Synonyms are similarly cross-referenced. The introduction describes and explains the A-Z section, including detailed features on the plant kingdom, plant nomenclature, types and shapes. Basic concepts of hardiness, cultivation and propagation are set out in straightforward language. The A-Z section consists of individual descriptions of 15000 plants. Plants are arranged alphabetically by botanical name, with an introduction for each genus, as well as background data on the botanical family, geographical origin, native habitat, the range of plants within the genus and any unusual qualities. Symbols show the basic shape of all trees featured, while more detailed illustrations help to explain the range of flower shapes, leaf types and habitats within a particular group.

Dk Pub

Since its first publication in 1987, the AHS Encyclopedia of Plants and Flowers has sold nearly 3 million copies and become the must-have reference for all gardeners around the world. This is the ideal book for selecting plants, planning a border, a greenhouse, or a whole garden, and for identifying plants, and it contains a wealth of information on their appearance and cultivation. The 8,000 plants described cover suitability for every

climate, including house and conservatory plants. The book begins with a general introduction and explanation of plant names, followed by a revised and enlarged plant selector, highlighting plants suitable for particular sites, soils, conditions, and purposes. The 5,000-entry illustrated plant catalog follows, divided into eight main sections: trees, shrubs, roses, climbers, perennials, annuals and biennials, rock plants, bulbs, water plants, and cacti and other succulents. In this new edition, the sections have been re-ordered to help plants be chosen more intuitively: by color, then season, then size. Feature spreads throughout the color section illustrate a range of cultivars within the most popular genera, such as pelargoniums and clematis. Each plant variety is illustrated by a colorful photograph, and accompanied by a detailed description with cultivation requirements. The single-color, text-only plant dictionary at the back contains entries for every genus in the book, plus more than 3,000 plants in addition to those in the illustrated catalog. It also functions as an index to the plant catalog, with extensive cross-referencing. All the information needed to grow each plant is included here. Following the introduction and plant selector, the book is divided into two main sections: a 440-page, full-colour illustrated plant catalogue, and a plant dictionary featuring 8,000

plants listed alphabetically by botanical name. There is also an index of common names and glossary of terms. Contents
