A skinhead attack on a Turkish schoolboy links four protagonists:

Dannaks, promoted to Oberkommissar, leaves Drugs to join Soko REX, a small unit that deals with racism and extremism. The unit is often seconded to assist Homicide, most recently because a serial killer is on the loose in Hamburg hanging right-wingers. But helping Homicide takes a backseat as Dannaks comes terms with his new duties and gets embroiled in a private police-corruption

investigation. Craig, a British reporter, writing about racism in Germany, uses the schoolboy attack to exacerbate tensions between Left and Right. Cenk, a Turkish youth, joins a gang with the noble idea of protecting the community against such attacks. But the gang takes on a life of its own. Karsten, a celebrated neo-Nazi, finds himself at a crossroads. As leader of the 211ers he is

like a weary gunslinger forced to continually satisfy his minions' banal need for action.

The Auslander Brigade American Mathematical Soc.

A New York Times Notable Book, and a "chaotic, laugh riot" (San Francisco Chronicle) of a memoir. Shalom Auslander was raised with a terrified respect for God. Even as he grew up and was estranged from his community, his religion and its traditions, he could not find the path to a life where he didn't struggle daily with the fear of God's formidable wrath. Foreskin's Lament reveals Auslander's "painfully, cripplingly, incurably, miserably religious" youth in a strict, socially isolated Orthodox Jewish community, and recounts his rebellion and efforts to make a new life apart from it. His combination of unrelenting humor and anger renders a rich and fascinating portrait of a man grappling with his faith and family.

In 1939, seventeen-year-old Austrians Jacob Silverman and Rachael Goldberg are bright, talented, and deeply in love. Because they are Jews, their families lose everything: their jobs, possessions, money, contact with loved ones, and finally their liberty. Jacob and Rachael and their families are removed from their comfortable Austrian homes into a decrepit ghetto where they are forced to live in squalor. From there, the families are sent to the Nazi concentration camp Theresienstadt, where Rachael and Jacob secretly become man and wife. Revel in their excitement as they escape through a harrowing tunnel and join local partisans to fight the Nazis. Ride the fetid train to Auschwitz-Birkenau, where only slavery, sickness, brutality, and death await. Stung by the death of loved ones, enslaved and starved, the young lovers have nothing to count on but faith, love, and courage.

Historians have become increasingly interested in material culture as both a category of analysis and as a teaching tool. And yet the profession tends to be suspicious of things; words are its stock-in-trade. What new insights can historians gain about the past by thinking about things? A central object (and consequence) of modern warfare is the radical destruction and transformation of the material world. And yet we know little about the role of material culture in the history of war and forced displacement:

objects carried in flight; objects stolen on battlefields; objects expropriated, reappropriated, and remembered. *Objects of War* illuminates the ways in which people have used things to grapple with the social, cultural, and psychological upheavals wrought by war and forced displacement. Chapters consider theft and pillaging as strategies of conquest; soldiers' relationships with their weapons; and the use of clothing and domestic goods by prisoners of war, extermination camp inmates, freed people, and refugees to make claims and to create a kind of normalcy. While studies of migration and material culture have proliferated in recent years, as have histories of the Napoleonic, colonial, World Wars, and postcolonial wars, few have focused on the movement of people and things in times of war across two centuries. This focus, in combination with a broad temporal canvas, serves historians and others well as they seek to push beyond the written word. Contributors: Noah Benninga, Sandra H. This text situates the glam rock phenomenon historically and examines it as a set of performance strategies. It explores the ways in which glam rock, while celebrating the showmanship of 1950s rock and roll, began to undermine rock's adherence to the ideology of authenticity in the late 1960s.

The conventional way of understanding what musicians do as performers is to treat them as producers of sound; some even argue that it is unnecessary to see musicians in performance as long as one can hear them. But musical performance, counters Philip Auslander, is also a social interaction between musicians and their audiences, appealing as much to the eye as to the ear. In *Concert: Performing Musical Persona* he addresses not only the visual means by which musicians engage their audiences through costume and physical gesture, but also spectacular aspects of performance such as light shows. Although musicians do not usually enact fictional characters on stage, they nevertheless present themselves to audiences in ways specific to the performance situation. Auslander's term to denote the musician's presence before the audience is musical persona. While presence

of a musical persona may be most obvious within rock and pop music, the book's analysis extends to classical music, jazz, blues, country, electronic music, laptop performance, and music made with experimental digital interfaces. The eclectic group of performers discussed include the Beatles, Miles Davis, Keith Urban, Lady Gaga, Nicki Minaj, Frank Zappa, B. B. King, Jefferson Airplane, Virgil Fox, Keith Jarrett, Glenn Gould, and Laurie Anderson.

This book is concerned with the role played by modules of infinite length when dealing with problems in the representation theory of groups and algebras, but also in topology and geometry; it shows the intriguing interplay between finite and infinite length modules.

This proceedings volume resulted from the Tenth International Conference on Representations of Algebras and Related Topics held at The Fields Institute (Toronto, ON, Canada). The collection of research and survey articles, honoring Vlastimil Dlab's seventieth birthday, reflects state-of-the-art research on the topic. Leading experts contributed papers, demonstrating the interaction between representation theory of finite dimensional algebras and neighboring subjects. A wide range of topics are covered, including quantum groups, the theory of Lie algebras, the geometry and combinatorics of tilting theory, commutative algebra, algebraic geometry, homology theories, and derived and triangulated categories. The book is suitable for graduate students and researchers interested in the theory of algebras.

Louis XIV, regency, rococo, neoclassical, empire, art nouveau, and historicist pastiche: furniture styles march across French history as regimes rise and fall. In this extraordinary social history, Leora Auslander explores the changing meaning of furniture from the mid-seventeenth to the early twentieth century, revealing how the aesthetics of everyday life were as integral to political events as to economic and social transformations. Enriched by Auslander's experience as a cabinetmaker, this work demonstrates how furniture served to represent and even generate its makers' and consumers' identities.

On Simple Modules in the Auslander-Reiten Components of Finite Groups Springer Nature

This textbook introduces the representation theory of algebras by focusing on two of its most important aspects: the Auslander-Reiten theory and the study of the radical of a module category. It starts by introducing and describing several characterisations of the radical of a module category, then presents the central concepts of irreducible morphisms and almost split sequences, before providing the definition of the Auslander-Reiten quiver, which encodes much of the information on the module category. It then turns to the study of endomorphism algebras, leading on one hand to the definition of the Auslander algebra and on the other to tilting theory. The book ends with selected properties of representation-finite algebras, which are now the best understood class of algebras. Intended for graduate students in representation theory, this book is also of interest to any mathematician wanting to learn the fundamentals of this rapidly growing field. A graduate course in non-commutative or homological algebra, which is standard in most universities, is a prerequisite for readers of this book.

A New York Times Notable Book 2012 The rural town of Stockton, New York, is famous for nothing: no one was born there, no one died there, nothing of any historical import at all has ever happened there, which is why Solomon Kugel, like other urbanites fleeing their pasts and histories, decided to move his wife and young son there. To begin again. To start anew. But it isn't quite working out that way for Kugel... His ailing mother stubbornly holds on to life, and won't stop reminiscing about the Nazi concentration camps she never actually suffered through. To

complicate matters further, some lunatic is burning down farmhouses just like the one Kugel bought, and when, one night, he discovers history—a living, breathing, thought-to-be-dead specimen of history—hiding upstairs in his attic, bad quickly becomes worse. *Hope: A Tragedy* is a hilarious and haunting examination of the burdens and abuse of history, propelled with unstoppable rhythm and filled with existential musings and mordant wit. It is a comic and compelling story of the hopeless longing to be free of those pasts that haunt our every present. This book is intended as a reference for mathematicians working with homological dimensions in commutative algebra and as an introduction to Gorenstein dimensions for graduate students with an interest in the same. Any admirer of classics like the Auslander-Buchsbaum-Serre characterization of regular rings, and the Bass and Auslander-Buchsbaum formulas for injective and projective dimension of f.g. modules will be intrigued by this book's content. Readers should be well-versed in commutative algebra and standard applications of homological methods. The framework is that of complexes, but all major results are restated for modules in traditional notation, and an appendix makes the proofs accessible for even the casual user of hyperhomological methods.

SUNDAY TIMES BOOK OF THE YEAR 2021 'Outrageous satire . . . extremely funny, weirdly touching' - Guardian 'A work of genius' - Scotsman 'Close-to-the-knuckle farce with a big beating heart' - Daily Mail This is the story of an unusual family. Though they are nothing like yours, you will recognize them. They are the last Cannibal-Americans. And they have a problem. When their mother dies, twelve children gather to dispose of the body in the traditional manner . . . by eating it. But can they follow the ancient rituals of consumption? Is their unique cultural heritage

worth preserving if it's this gross? And what about dietary requirements - one of them is vegan. Surely it can't be this hard to do the right thing? *Mother for Dinner* is a dark comedy about modern life and its many difficulties.

Reverse mathematics studies the complexity of proving mathematical theorems and solving mathematical problems. Typical questions include: Can we prove this result without first proving that one? Can a computer solve this problem? A highly active part of mathematical logic and computability theory, the subject offers beautiful results as well as significant foundational insights. This text provides a modern treatment of reverse mathematics that combines computability theoretic reductions and proofs in formal arithmetic to measure the complexity of theorems and problems from all areas of mathematics. It includes detailed introductions to techniques from computable mathematics, Weihrauch style analysis, and other parts of computability that have become integral to research in the field. Topics and features: Provides a complete introduction to reverse mathematics, including necessary background from computability theory, second order arithmetic, forcing, induction, and model construction Offers a comprehensive treatment of the reverse mathematics of combinatorics, including Ramsey's theorem, Hindman's theorem, and many other results Provides central results and methods from the past two decades, appearing in book form for the first time and including preservation techniques and applications of probabilistic arguments Includes a large number of exercises of varying levels of difficulty, supplementing each chapter The text will be accessible to students with a standard first year course in mathematical logic. It will also be a useful reference for researchers in reverse mathematics, computability theory, proof theory, and related areas. Damir D. Dzhamalov is an Associate Professor of Mathematics at the University of Connecticut, CT, USA. Carl Mummert is a Professor of Computer and Information Technology at Marshall University, WV, USA.

In *Liveness* Philip Auslander addresses what may be the single most important question facing all kinds of performance today: What is the status of live performance in a culture dominated by

mass media? By looking at specific instances of live performance such as theatre, rock music, sport and courtroom testimony, *Liveness* offers penetrating insights into media culture. This provocative book tackles some of the enduring 'sacred truths' surrounding the high cultural status of the live event.

On the Existence of Postprojective Components in the Auslander Reiten Quiver of an Algebra Univ of California Press

Violent rabbis, lovelorn wives, a busy Grim Reaper, shame-filled simians, and one seriously angry deity populate this humorous and disquieting collection. Shalom Auslander's stories in *Beware of God* have the mysterious punch of a dream. They are wide ranging and inventive: A young Jewish man's inexplicable transformation into a very large, blond, tattooed goy ends with a Talmudic argument over whether or not his father can beat his unclean son with a copy of the Talmud. A pious man having a near-death experience discovers that God is actually a chicken, and he's forced to reconsider his life -- and his diet. At God's

insistence, Leo Schwartzman searches Home Depot for supplies for an ark. And a young boy mistakes Holocaust Remembrance Day as emergency preparedness training for the future.

Auslander draws upon his upbringing in an Orthodox Jewish community in New York State to craft stories that are filled with shame, sex, God, and death, but also manage to be wickedly funny and poignant.

Ethics and Remembrance in the Poetry of Nelly Sachs and Rose Ausländer Cornell University Press

By the author of *Foreskin's Lament*, a novel of identity, tribalism, and mothers. Seventh Seltzer has done everything he can to break from the past, but in his overbearing, narcissistic mother's last moments he is drawn back into the life he left behind. At her deathbed, she whispers in his ear the two words he always knew she would: "Eat me." This is not unusual, as the Seltzers are Cannibal-Americans, a once proud and thriving ethnic group, but for Seventh, it raises some serious questions, both practical and emotional. Of practical concern, his dead mother is six-foot-two

and weighs about four hundred and fifty pounds. Even divided up between Seventh and his eleven brothers, that's a lot of red meat. Plus Second keeps kosher, Ninth is vegan, First hated her, and Sixth is dead. To make matters worse, even if he can wrangle his brothers together for a feast, the Can-Am people have assimilated, and the only living Cannibal who knows how to perform the ancient ritual is their Uncle Ishmael, whose erratic understanding of their traditions leads to conflict. Seventh struggles with his mother's deathbed request. He never loved her, but the sense of guilt and responsibility he feels--to her and to his people and to his "unique cultural heritage"--is overwhelming. His mother always taught him he was a link in a chain, thousands of people long, stretching back hundreds of years. But, as his brother First says, he's getting tired of chains. Irreverent and written with Auslander's incomparable humor, *Mother for Dinner* is an exploration of legacy, assimilation, the things we owe our families, and the things we owe ourselves.
