"ExxonMobil has met its match in Coll, an elegant writer and dogged reporter . . . extraordinary . . . monumental." —The Washington Post "Fascinating . . . Private Empire is a book meticulously prepared as if for trial . . . a compelling and elucidatory work." —Bloomberg From the award-winning and bestselling author of *Ghost Wars* and *Directorate S*, an extraordinary exposé of Big Oil. Includes a profile of current Secretary of State and former chairman and chief executive of ExxonMobil, Rex Tillerson In this, the first hard-hitting examination of ExxonMobil—the largest and most powerful private corporation in the United States—Steve Coll reveals the true extent of its power. Private Empire pulls back the curtain, tracking the corporation's recent history and its central role on the world stage, beginning with the Exxon Valdez accident in 1989 and leading to the Deepwater Horizon oil spill in the Gulf of Mexico in 2010. The action spans the globe—featuring kidnapping cases, civil wars, and high-stakes struggles at the Kremlin—and the narrative is driven by larger-than-life characters, including corporate legend Lee "Iron Ass" Raymond, ExxonMobil's chief executive until 2005, and current chairman and chief executive Rex Tillerson, President-elect Donald Trump's nomination for Secretary of State. A penetrating, news-breaking study, *Private Empire* is a defining portrait of Big Oil in American politics and foreign policy.

Based on British and Iranian sources, this book investigates the background and goals of the coup in Iran, examining how British foreign and domestic agents interfered with Iran's internal affairs between the nationalization of Iran's oil in 1951 until its failure in 1953 with the overthrow of Prime Minister Mossadegh. How and why was Iran's democratically elected government ousted in 1953? Most studies refer to a 'CIA-led' operation. This study analyses how British agents used the Shah, the ancient Persian Durbar, Majlis deputies, Islamic clergy, and Iranian military officers in the overthrow of the first democratically elected Prime Minister, and highlights how Britain used the 'Communist menace' as a pretext for protecting its oil interests and persuaded the Americans to orchestrate the coup. This close interaction between British colonial interests, American Cold War goals and Iranian politics ultimately defeated the democratic aspirations of Iran's people.

In a rapidly changing world, there is an ever-increasing need to monitor the Earth's resources and manage it sustainably for future generations. Earth observation from satellites is critical to provide information required for informed and timely decision making in this regard. Satellite-based earth observation has advanced rapidly over the last 50 years, and there is a plethora of satellite sensors imaging the Earth at finer spatial and spectral resolutions as well as high temporal resolutions. The amount of data available for any single location on the Earth is now at the petabyte-scale. An ever-increasing capacity and computing power is needed to handle such large datasets. The Google Earth Engine (GEE) is a cloud-based computing platform that was established by Google to support such data processing. This facility allows for the storage, processing and analysis of spatial data using centralized high-power computing resources, allowing scientists, researchers, hobbyists and anyone else interested in such fields to mine this data and understand the changes occurring on the Earth's surface. This book presents research that applies the Google Earth Engine in mining, storing, retrieving and processing spatial data for a variety of applications that include vegetation monitoring, cropland mapping, ecosystem assessment, and gross primary productivity, among others. Datasets used range from coarse spatial resolution data, such as MODIS, to medium resolution datasets (Worldview -2), and the studies cover the entire globe at varying spatial and temporal scales.

Carbon Capture and Storage (CCS) technology could provide a technological bridge for achieving near to midterm GHG emission reduction goals. Integrated CCS technology is still under development and has noteworthy challenges, which would be possible to overcome through the implementation of large-scale demonstration projects. In order to assist developing countries to better understand issues related to potential technology deployment, there is a need to start analyzing various numerous challenges facing CCS within the economic and legal context of developing countries and countries in transition. This report is the first effort of the World Bank Group to contribute to a deeper understanding of (a) the integration of power generation with CCS technologies, as well as their costs; (b) regulatory barriers to the deployment of CCS; and (c) global financing requirements for CCS and applicable project finance structures involving instruments of multilateral development institutions. This report does not provide prescriptive solutions to overcome these barriers, since action must be taken on a country-by-country basis, taking account of different circumstances and national policies. Individual governments should decide their priorities on climate change mitigation and adopt appropriate measures accordingly. The analyses presented in this report may take on added relevance, depending on the future direction of international climate negotiations and domestic legal and policy measures in both developed and developing countries, and how they serve to encourage carbon sequestration. We expect that this report will provide insights for policy makers, stakeholders, private financiers, and donors in meeting the challenges of the deployment of climate change mitigation technologies and CCS in particular.

Fundamentals of Business (black and white) DIANE Publishing
LARGE PRINT EDITION! More at LargePrintLiberty.com Summing up the work of libertarian economist and historian Murray N. Rothbard (1926–1995) and noting its stunning range, philosopher David Gordon once wondered "if there are really three, four, or five geniuses writing under his name." The lively essays collected in this book display one of those geniuses: Rothbard the journalist, cultural critic, political observer, and movement organizer. Even more remarkable, they represent just a fraction of what he wrote in his spare time, for just one publication, and in just the last few years of his life. His articles combined libertarian antigovernment economics, decentralist local patriotism, antiwar isolation, and a dissident/reactionary cultural outlook that saw the growth of government as the key to the loss of the Old Republic. He defended land-rights groups against environmentalists, citizen militias against gun grabbers, isolationists against imperialists, paleoconservatives against neoconservatives, populists against party regulars, anti-New World Order conspiracy theorists against

the establishment, nationalists against internationalist planners, states' righters against libertarian centralists, the Christian Right against its own leadership, and much more. These essays show not only Rothbard's intellectual vigor but the complete joy with which he embraced life, and how his extreme optimism made even the most severe setbacks tolerable. He experienced great disappointments and great successes, but through it all he was heroic, undaunted, and irrepressible.

In this pioneering work Siraj Sait and Hilary Lim address Islamic property and land rights, drawing on a range of socio-historical, classical and contemporary resources. They address the significance of Islamic theories of property and Islamic land tenure regimes on the 'webs of tenure' prevalent in the Muslim societies. They consider the possibility of using Islamic legal and human rights systems for the development of inclusive, pro-poor approaches to land rights. They also focus on Muslim women's rights to property and inheritance systems. Engaging with institutions such as the Islamic endowment (waqf) and principles of Islamic microfinance, they test the workability of 'authentic' Islamic proposals. Located in human rights as well as Islamic debates, this study offers a well researched and constructive appraisal of property and land rights in the Muslim world.

This book is the first of its type on NEOM Region, NW of Saudi Arabia. This region has been designated in 2017 to be an international economic hub. However, no studies have been done on this region which occupies several natural resources including remarkable landscape with unique ecological species, ores and water resources. The region is also vulnerable to many aspects of threatening natural hazards. Based on her expertise, namely geomorphological processes, earth sciences, space techniques and natural risk assessment, the author made an initiative to produce this book using advanced tools, specifically satellite images and geo-information system. The book introduces several thematic maps obtained for the first time for NEOM Region. Hence, it represents a scientific guide for land management and urban planning approaches. This book is a very significant document for a variety of readers and researchers including decision makers, land managers and planners, as well as geographers and geologists. In addition, the basic concepts and new approaches attract researchers and academic teams including students, universities and research centers not only in Saudi Arabia, but in different parts of the World.

The structure and content of the book

remains the same, with thorough updating of the plentiful region and country descriptions, demographic data, graphs and maps. Managing Risk and Information Security Cambridge University Press

Master's Thesis from the year 2015 in the subject Engineering - Civil Engineering, , course: Construction management, language: English, abstract: Construction is considered to be a high waste generating industry, in spite of its importance for human lives and economies. A lot of researches have been conducted to find out new ways to improve the way construction projects are managed. The main goals of these researches were to reduce the cost and time for projects as well as increase the quality of the final product. In 1990's Lean Construction concept has been founded as an alternative for the conventional construction project management methodologies, based on Lean manufacturing concepts focusing on value and reducing waste in the construction processes. Building Information Modeling (BIM) is a modern tool enabling intelligent model based process. BIM implementation has a lot of benefits to the construction, for instance, making use of visualization of the final product to facilitate communication between different disciplines and team members, enable what-if analysis and analyze the constructability of a building. During the last decade, Pioneering contractors in US have realized the synergic fit between Lean and BIM. The interaction between Lean Construction and BIM has been the topic of many researches since then. This research introduces the term "LeanBIM", which refers to the combination of the tools of Lean and BIM, and discuss their effects on sustainability and resource efficiency. An extensive review of literature is carried out and a survey is conducted on the Lean and BIM professionals and researchers from all over the world. The results showed the positive effect of LeanBIM implementation on sustainability of building as well as resource efficiency. LeanBIM is also expected to reduce the overall cost and time required for construction, and increase the quality. The results also showed that there is shortage in Lean/BIM professionals, lack of legal framework to enable the collaboration between all parties, lack of awareness of LeanBIM benefits. It is observed from the result that a considerable investment is required to form an IT infrastructure capable of implementing LeanBIM. Keywords: Lean Construction, Building Information Modeling, Sustainability, LeanBIM, Resource efficiency, Construction Project Management.
