The partial differential equation is fourth order, since the highest derivative, and in fact each of the derivatives, is of order four. The equation is linear, since the left hand side is a linear function of the partial derivatives. *Elementary Differential Equations and Boundary Value ...* Solution of Differential Equations A solution of a differential

equation is a function that satisfies the differential equation on some open interval; thus, y is a solution of (1.2.2) if y is n times differentiable and $y^{(n)}(x) = f(x, y(x), y'(x), \dots, y^{(n-1)}(x))$ for all x in some open interval (a, b) .
