Why It Happens and What to Do About It Henry Holt and Company

Everyone has heard of the term "pseudoscience", typically used to describe something that looks like science, but is somehow false, misleading, or unproven. Many would be able to agree on a list of things that fall under its umbrella-- astrology, phrenology, UFOlogy, creationism, and eugenics might come to mind. But defining what makes these fields "pseudo" is a far more complex issue. It has proved impossible to come up with a simple criterion that enables us to differentiate pseudoscience from genuine science. Given the virulence of contemporary disputes over the denial of climate change and anti-vaccination movements--both of which display allegations of "pseudoscience" on all sides-- there is a clear need to better understand issues of scientific demarcation. On the Fringe explores the philosophical and historical attempts to address this problem of demarcation. This book argues that by understanding doctrines that are often seen as antithetical to science, we can learn a great deal about how science operated in the past and does today. This exploration raises several questions: How does a doctrine become demonized as pseudoscientific? Who has the authority to make these pronouncements? How is the status of science shaped by political or cultural contexts? How does pseudoscience differ from scientific fraud? Michael D. Gordin both answers these questions and guides readers along a bewildering array of marginalized doctrines, looking at parapsychology (ESP), Lysenkoism, scientific racism, and alchemy, among others, to better understand the struggle to define what science is and is not, and how the controversies have shifted over the centuries. On the Fringe provides a historical tour through many of these fringe fields in order to provide tools to think deeply about scientific controversies both in the past and in our present.

[Why People Believe Weird Things](#) MIT Press

Denying History takes a bold and in-depth look at those who say the Holocaust never happened

and explores the motivations behind such claims. While most commentators have dismissed the Holocaust deniers as antisemitic neo-Nazi thugs who do not deserve a response, historians Michael Shermer and Alex Grobman have immersed themselves in the minds and culture of these Holocaust "revisionists." In the process, they show how we can be certain that the Holocaust happened and, for that matter, how we can confirm any historical event. This edition is expanded with a new chapter and epilogue examining current, shockingly mainstream revisionism.

Narrating the Twentieth Century Univ of California Press

Presents a controversial history of violence which argues that today's world is the most peaceful time in human existence, drawing on psychological insights into intrinsic values that are causing people to condemn violence as an acceptable measure.

Weird Earth Macmillan

A new edition covering the latest scientific research on how the brain makes us believers or skeptics Recent polls report that 96 percent of Americans believe in God, and 73 percent believe that angels regularly visit Earth. Why is this? Why, despite the rise of science, technology, and secular education, are people turning to religion in greater numbers than ever before? Why do people believe in God at all? These provocative questions lie at the heart of *How We Believe*, an illuminating study of God, faith, and religion. Bestselling author Michael Shermer offers fresh and often startling insights into age-old questions, including how and why humans put their faith in a higher power, even in the face of scientific skepticism. Shermer has updated the book to explore the latest research and theories of psychiatrists, neuroscientists, epidemiologists, and philosophers, as well as the role of faith in our increasingly diverse modern world. Whether believers or nonbelievers, we are all driven by the need to understand the universe and our place in it. *How We Believe* is a brilliant scientific tour of this ancient and mysterious desire.

Science Friction Courier Corporation

Antivaxxers are crazy. That is the perception we all gain from the media, the internet, celebrities, and beyond, writes Bernice Hausman in *Anti/Vax*, but we need to open our eyes and ears so that we can all have a better conversation about vaccine skepticism and its implications. Hausman argues that the heated debate about vaccinations and whether to get them or not is most often

fueled by accusations and vilifications rather than careful attention to the real concerns of many Americans. She wants to set the record straight about vaccine skepticism and show how the issues and ideas that motivate it—like suspicion of pharmaceutical companies or the belief that some illness is necessary to good health—are commonplace in our society. Through *Anti/Vax*, Hausman wants to engage public health officials, the media, and each of us in a public dialogue about the relation of individual bodily autonomy to the state's responsibility to safeguard citizens' health. We need to know more about the position of each side in this important stand-off so that public decisions are made through understanding rather than stereotyped perceptions of scientifically illiterate antivaxxers or faceless bureaucrats. Hausman reveals that vaccine skepticism is, in part, a critique of medicalization and a warning about the dangers of modern medicine rather than a glib and gullible reaction to scaremongering and misunderstanding.

THE BELIEVING BRAIN

HarperCollins

Discovered in the attic in which she spent the last years of her life, Anne Frank's remarkable diary has since become a world classic—a powerful reminder of the horrors of war and an eloquent testament to the human spirit. "The single most compelling personal account of the Holocaust ... remains astonishing and excruciating."—The New York Times Book Review In 1942, with Nazis occupying Holland, a thirteen-year-old Jewish girl and her family fled their home in Amsterdam and went into hiding. For the next two years, until their whereabouts were betrayed to the Gestapo, they and another family lived cloistered in the "Secret Annex" of an old office building. Cut off from the outside world, they faced hunger, boredom, the constant cruelties of living in confined quarters, and the ever-present threat of discovery and death. In her diary Anne Frank recorded vivid impressions of her experiences during this period. By turns thoughtful, moving, and amusing, her account offers a fascinating commentary on human courage and frailty and a compelling self-portrait of a sensitive and spirited young woman whose promise was tragically cut short.

How We Believe Simon and Schuster

Bestselling author Michael Shermer delves into the unknown, from heretical ideas about the

boundaries of the universe to Star Trek's lessons about chance and time A scientist pretends to be a psychic for a day-and fools everyone. An athlete discovers that good-luck rituals and getting into "the zone" may, or may not, improve his performance. A historian decides to analyze the data to see who was truly responsible for the Bounty mutiny. A son explores the possibilities of alternative and experimental medicine for his cancer-ravaged mother. And a skeptic realizes that it is time to turn the skeptical lens onto science itself. In each of the fourteen essays in *Science Friction*, psychologist and science historian Michael Shermer explores the very personal barriers and biases that plague and propel science, especially when scientists push against the unknown. What do we know and what do we not know? How does science respond to controversy, attack, and uncertainty? When does theory become accepted fact? As always, Shermer delivers a thought-provoking, fascinating, and entertaining view of life in the scientific age.

HEAVENS ON EARTH

Anchor

Howard Zinn's *A People's History of the United States* has sold more than 2.5 million copies. It is pushed by Hollywood celebrities, defended by university professors who know better, and assigned in high school and college classrooms to teach students that American history is nothing more than a litany of oppression, slavery, and exploitation. Zinn's history is popular, but it is also massively wrong. Scholar Mary Grabar exposes just how wrong in her stunning new book *Debunking Howard Zinn*, which demolishes Zinn's Marxist talking points that now dominate American education. In *Debunking Howard Zinn*, you'll learn, contra Zinn: How Columbus was not a genocidal maniac, and was, in fact, a defender of Indians Why the American Indians were not feminist-communist sexual revolutionaries ahead of their time How the United States was founded to protect liberty, not white males' ill-gotten wealth Why Americans of the "Greatest Generation" were not the equivalent of Nazi war criminals How the Viet Cong were not well-meaning community leaders advocating for local self-rule Why the Black Panthers were not civil rights leaders Grabar also reveals Zinn's bag of dishonest rhetorical tricks: his slavish reliance on partisan history, explicit rejection of historical balance, and selective quotation of sources to make them say the exact opposite of what their authors intended. If you care about America's past—and our future—you need this book.

Debunking Howard Zinn Oxford University Press, USA

Collected essays from bestselling author Michael Shermer's celebrated columns in *Scientific American* For fifteen years, bestselling author Michael Shermer has written a column in *Scientific American* magazine that synthesizes scientific concepts and theory for a general audience. His trademark combination of deep scientific understanding and entertaining writing style has thrilled his huge and devoted audience for years. Now, in *Skeptic*, seventy-five of these columns are available together for the first time; a welcome addition for his fans and a stimulating introduction for new readers.

REPUBLICAN PARTY ANIMAL

Oxford University Press

"David Stein brought right-wing congressmen, celebrities, writers and entertainment industry figures together for shindigs, closed to outsiders. . . . There was just one problem. Stein was not who he claimed."—The Guardian In 2013, Republican "hero" David Stein made international headlines when he was unmasked as David Cole, the notorious Jewish Holocaust denier who made an entirely different set of headlines in the 1990s with his videos from within the gates of Auschwitz and his appearances on shows like *60 Minutes* and *Donahue*. After a \$25,000 bounty was put on his head by a violent extremist group, Cole left behind the bizarre world of Holocaust denial, a landscape populated by Hitler fetishists who Cole himself detested. Then, David Stein the Republican organizer was born. Stein soon became a major force in the closed-door world of Hollywood right-wingers—people who felt as alienated from the mainstream of their profession as

Cole had felt as the lone Jewish Holocaust revisionist. Soon enough, Stein was working with major GOP power players and far-right Hollywood A-listers, creating huge private events for the West Coast GOP elite . . . until it all came crashing down when a vengeful former girlfriend outed him publicly. Condemned by those who had previously lauded him, Cole was left with nothing but his story. And here he tells it, warts and all, including the first-ever exposé of the secretive Hollywood far-right underground, "Friends of Abe."

[The "Bad Boy of Holocaust History" Blows the Lid Off Hollywood's Secret Right-Wing Underground](#) Macmillan

"Skeptic Magazine" editor Michael Shermer and Alex Grobman from the Simon Wiesenthal Center tried to "answer all the claims of the Holocaust deniers." But it's a grand feint: they ignored the vast amount of scholarly studies by revisionists and committed falsifications, contortions, omissions, and fallacious interpretations of the evidence.

[Where Science Meets Pseudoscience](#) Henry Holt and Company

This collection of ten essays focuses on the way major schools and individuals have narrated histories of the Middle East. The distinguished contributors explore the historiography of economic and intellectual history, nationalism, fundamentalism, colonialism, the media, slavery, and gender. In doing so, they engage with some of the most controversial issues of the twentieth century. Middle Eastern studies today cover a rich and varied terrain, yet the study of the profession itself has been relatively neglected. There is, however, an ever-present need to examine what the research has chosen to include and exclude and to become more consciously aware of shifts in research approaches and methods. This collection illuminates the evolving state of the art and suggests new directions for further research.

[Telling Lies about Hitler](#) Holt Paperbacks

Aliens. Ley lines. Water dowsing. Conspiracies and myths captivate imaginations and promise mystery and magic. Whether it's arguing about the moon landing hoax or a Frisbee-like Earth drifting through space, when held up to science and critical thinking, these ideas fall flat. In *Weird Earth: Debunking Strange Ideas About Our Planet*, Donald R. Prothero demystifies these conspiracies and offers answers to some of humanity's most outlandish questions. Applying his extensive scientific knowledge, Prothero corrects misinformation that con artists and quacks use to hoodwink others about geology--hollow earth, expanding earth, and bizarre earthquakes--and mystical and paranormal happenings--healing crystals, alien landings, and the gates of hell. By deconstructing wild claims such as prophesies of imminent natural disasters, Prothero provides a way for everyone to recognize dubious assertions. Prothero answers these claims with facts, offering historical and scientific context in a light-hearted manner that is accessible to everyone, no matter their background. With a careful layering of evidence in geology, archaeology, and biblical and historical records, Prothero's *Weird Earth* examines each conspiracy and myth and leaves no question unanswered.

DENIAL [MOVIE TIE-IN]

Castle Hill Services

Richard J. Evans worked on the historical evidence on behalf of the defence during the Irving libel trial. In *Telling Lies about Hitler*, the author discusses the importance of historical writing and the social role of historians in such trials.

Denying History: How Michael Shermer and Alex Grobman Botched Their Attempt to Refute Those Who Say the Holocaust Never Happened Macmillan

For most people cockroaches, spiders, worms, dung beetles and hyenas are not paragons of beauty in a natural world; in fact, many would prefer that they were not there at all. But in this book an American science-writer who has won the Pulitzer Prize champions the cause of these beasts - the lowlifes and the brutes - in a series of articles, most of which appeared in *The New*

York Times, and which she has reworked into a single narrative.

Where Sense Meets Nonsense Courier Corporation

In her acclaimed 1993 book *Denying the Holocaust*, Deborah Lipstadt called David Irving, a prolific writer of books on World War II, "one of the most dangerous spokespersons for Holocaust denial." The following year, after Lipstadt's book was published in the United Kingdom, Irving led a libel suit against Lipstadt and her publisher. She prepared her defense with the help of a first-rate team of solicitors, historians, and experts, and a dramatic trial unfolded. Denial, previously published as *History on Trial*, is Lipstadt's riveting, blow-by-blow account of this singular legal battle, which resulted in a formal denunciation of a Holocaust denier that crippled the movement for years to come. Lipstadt's victory was proclaimed on the front page of major news-papers around the world, such as *The Times* (UK), which declared that "history has had its day in court and scored a crushing victory."

The Scientific Search for the Afterlife, Immortality, and Utopia Macmillan

Presents a collection of essays on various topics in science and personalities in science, including

Carl Sagan, Sigmund Freud, and Alfred Russel Wallace.

Middle East Historiographies Simon and Schuster

The denial of the Holocaust has no more credibility than the assertion that the earth is flat. Yet there are those who insist that the death of six million Jews in Nazi concentration camps is nothing but a hoax perpetrated by a powerful Zionist conspiracy. Sixty years ago, such notions were the province of pseudohistorians who argued that Hitler never meant to kill the Jews, and that only a few hundred thousand died in the camps from disease; they also argued that the Allied bombings of Dresden and other cities were worse than any Nazi offense, and that the Germans were the "true victims" of World War II. For years, those who made such claims were dismissed as harmless cranks operating on the lunatic fringe. But as time goes on, they have begun to gain a hearing in respectable arenas, and now, in the first full-scale history of Holocaust denial, Deborah Lipstadt shows how—despite tens of thousands of living witnesses and vast amounts of documentary evidence—this irrational idea not only has continued to gain adherents but has become an international movement, with organized chapters, "independent" research centers, and official publications that promote a "revisionist" view of recent history. Lipstadt shows how Holocaust denial thrives in the current atmosphere of value-relativism, and argues that this chilling attack on the factual record not only threatens Jews but undermines the very tenets of objective scholarship that support our faith in historical knowledge. Thus the movement has an unsuspected power to dramatically alter the way that truth and meaning are transmitted from one generation to another.

EAVESDROPPING ON HELL

Penguin Group USA

The best-selling author of *Why People Believe Weird Things* offers a revealing study of the influence of evolutionary theory on the modern economy, as well as the evolutionary roots of human economic behavior, bringing together the latest research in neuroeconomics, psychology, biology, and other fields to analyze the economics of everyday life. Reprint. 40,000 first printing.

THE RIGHT SIDE OF HISTORY

Steve Parish

What, other than love, can explain the German people's glad welcome of this humble, but thoroughly dedicated savior from the Eastern Marches? What, other than love, can explain how the people of Greater Germany remained with him in bad times and good, for better or for worse? What, other than love, can explain the fact that those who remember him love him still? We loved him because he stood for the best that was in us, and as Our Leader, demanded of us our best. It was never Hitler's Germany. It shall always be: Germany's Hitler, the man loved by his people. This is why we loved him...
