Chuang Tzu's book, written in Ancient
China sometime around 300 BC, has lain
hidden for millennia in a sprawling
morass known as the Chuang Tzu. Now,

at last, it has been excavated. Here for
the first time in over two thousand years
is Chuang Tzu's book: crisp and poetic,
structured and elegant. A philosophical
and literary work of art. Chuang Tzu uses
grand metaphors and charming parables
to help us to stop identifying with this
and that thing, and to instead identify
with our horizon-spanning field of
consciousness and our embodied sense
of spirit or energy. This frees us to be
present with, and to playfully engage
with, whatever things happen to appear

before us.

The present volume offers a critical Hebrew text of the two versions of Ibn Ezra's *Sefer ha-Te'amim*, the Book of Reasons, accompanied by an annotated translation and commentary. The two treatises presented here were designed by Ibn Ezra to offer "reasons", "explanations", or "meanings" of the raw astrological concepts formulated in the introduction to astrology that Ibn Ezra entitled *Reshit Hokhmah* (Beginning of Wisdom).

Classical Durkheimian Studies of Myth
and the Sacred presents English

translations of several important essays, some never before translated, by members of the famous Annee sociologique group around Emile Durkheim. These works by Marcel Mauss, Henri Hubert, and Robert Hertz are key contributions to today's growing interest in and reinterpretation of Durkheimian thought on culture, religion, and symbolism. The central thrust in this new interpretive effort uses the Durkheimian theory of the sacred to understand the symbolism and meanings of cultural structures and narratives more generally. This book is vital to any contemporary collection emphasizing social theory.

The contract of employment is the central legal institution of modern English employment law. It provides the foundation upon which most statutory employment rights are constructed; it provides a conduit for the implementation of norms negotiated in collective bargaining; and it continues to provide a contractual structure for the terms and conditions of employment for a significant proportion of the working population. The Contract of Employment provides the most ambitious and comprehensive treatise on the theoretical and doctrinal aspects of the English contract of employment in the common law world. Under the general editorship of Professor Mark Freedland, the text has been produced by a team of world leading experts in employment

law. Part I examines the theoretical context to the contract of employment, studying its structure and development from a wide variety of theoretical and comparative perspectives. Part II provides an exposition and analysis of the doctrinal aspects of the contract of employment. The coverage of The Contract of Employment is unrivalled in its depth, detail and sophistication. The legal analysis is always informed by a keen sense of the modern labour market context of the contract of employment, and it is sensitive to contemporary challenges such as precariousness, the interaction with migration law, the role of legislation in the contract of employment, and the decline of collective bargaining. It will be the principal reference point for the

practitioners, judges, and academics concerned with the contract of employment as a legal category, both nationally and internationally.

This book covers the applications of computational intelligence techniques in business systems and advocates how these techniques are useful in modern business operations. The book redefines the computational intelligence foundations, the three pillars - neural

networks, evolutionary computation, and fuzzy systems. It also discusses emerging areas such as swarm intelligence, artificial immune systems (AIS), support vector machines, rough sets, and chaotic systems. The other areas have also been demystified in the book to strengthen the range of computational intelligence techniques such as expert systems, knowledge-based systems, and genetic algorithms. Therefore, this book will redefine the role of computational intelligence techniques in modern business system operations such as marketing, finance & accounts, operations, personnel management, supply chain management, and logistics. Besides, this book guides the readers through using them to model, discover, and interpret new patterns that cannot

be found through statistical methods alone in various business system operations. This book reveals how computational intelligence can inform the design and integration of services, architecture, brand identity, and product portfolio across the entire enterprise. The book will provide insights into research gaps, open challenges, and unsolved computational intelligence problems. The book will act as a premier reference and instant material for all the users who are contributing/practicing the adaptation of computational intelligence modern techniques in business systems. *State Liability and the Law* Jaypee Brothers Medical Publishers

the general history of our Nation's highways and those whose interest might be more narrowly confined to matters relating to the technical aspects of highway transportation. It has been prepared in two parts--Part I deals with the broad subject of highway history from colonial days forward to the historic highway legislation of 1956; Part II deals separately and in some detail with the several areas of responsibility for administration, planning and research, design, construction and maintenance of highways and bridges, both foreign and domestic as authorized under the Federal highway legislation. The reader will note the changing reference to the name of the Federal unit assigned responsibility for the administration of the Federal-aid highway program--the

original Office of Road Inquiry, the Bureau of Public Roads, the Public Roads Administration, again the Bureau of Public Roads, and finally the Federal Highway Administration. These changes in organization title are chronicled in Chapter I, Part II which covers the program administration through the years. The economic growth of the United States in the 200 years of its existence and the record of individual prosperity achieved by its people in that brief period of time

are attributable to the success of the transportation system developed during that period--a system almost totally dependent on the Nation's highways. This book has been written to record for posterity the story of highway development in the United States, beginning in the early years of the new Nation and expanding with the growing country as it moved into the undeveloped areas west of the original colonial States, and ultimately evolving into the Federal-aid highway program in which the State and Federal Governments have worked cooperatively and successfully for the past 60 years. It is a proud story and one that should be recorded. The book will make available for future highway transportation officials a documentation of earlier

decisions and experiences which, up to this time, have been available only in scattered writings or in the individual knowledge and recollections of many of those involved directly in the Federal-aid highway program during this period of development and whose experiences have not previously been recorded.

Being a parent in the modern world is tough. We are often overwhelmed with fear about damaging our children, guilt about our imperfections, and confusion about our role. Harriet Connor knows these feelings well. But hers is not just another parenting book full of "shoulds and shouldn'ts" to make you feel worse. Rather, she invites you to step back and consider the bigger picture: What is the

purpose of life and parenthood? What are our human limitations? How can we cope with our guilt and fear? What are our family's values and how do we pass them on? What is our family's structure and place within the wider community? When she was desperate for answers, Harriet Connor turned to the ancient wisdom of her ancestors--the Bible. She went looking for little pieces of grandmotherly advice, but what she found was a grand vision--a big picture--that made sense of both life and parenthood. Whether you are new to the Bible or have read it before, you will not regret taking time to reflect on its message, which has given comfort and guidance to generations of parents just like you.

THE REVIVAL OF SCHOLASTIC PHILOSOPHY IN THE NINETEENTH CENTURY

Vigeo Press

This book attempts to prove the

consistent nature of Paul's financial policy by drawing from his social environment and theological convictions to tease out a three-way relational pattern with God as the source of all possessions. This three-way relational framework not only dictates Paul's decision to accept or reject finances from his churches but also directly challenges long-standing claims made about Paul's financial policy. After outlining the various approaches that scholars have taken to make sense of Paul's seemingly inconsistent financial policy, this book provides a close exegetical analysis of relevant passages in Philippians, 1 Corinthians, and 2 Corinthians in order to unearth a three-way relational pattern found in Philippians but that is absent from the

Corinthian Correspondence. In Paul's positive gift-exchange relationship with the Philippians, God is acknowledged as the source of all possessions, whereas the Corinthians are criticized for striving after two-way exchanges that result in honor, power, and prestige. After this is demonstrated, a socio-theological reason for Paul's refusal of Corinthian gifts is propounded. Paul refused Corinthian support, not because they desired to patronise him as a dependent client, but because they sought to be under Paul as their superior, an act that neglected God as the superior source of all gifts in the divine economy. Paul therefore refuses their support to avoid two-way relationships of gift so prevalent in ancient society and to underscore the source of the gift of the gospel, the one

from whom and through whom and to whom are all things - God.

The End of Modern Portfolio Theory Behavioral Investment Management proves what many have been thinking since the global economic downturn: Modern Portfolio Theory (MPT) is no longer a viable portfolio management strategy. Inherently flawed and based largely on ideology, MPT can not be relied upon in modern markets. Behavioral Investment Management offers a new approach-one addresses certain realities that MPT ignores, including the fact that emotions play a major role in investing. The authors lay out new standards reflecting behavioral finance and dynamic asset allocation,

then explain how to apply these standards to your current portfolio construction efforts. They explain how to move away from the idealized, black-and-white world of MPT and into the real world of investing--placing heavy emphasis on the importance of mastering emotions. Behavioral Investment Management provides a portfolio-management standard for an investing world in disarray.
