[An Introduction to the Archaeology of Ancient Egypt](#) Cambridge University Press

An original and accessible approach to learning hieroglyphs, written by an experienced teacher and author. This is the first guide to reading hieroglyphs that begins with Egyptian monuments themselves. Assuming no knowledge on the part of the reader, it shows how to interpret the information on the inscriptions in a step-by-step journey through the script and language of ancient Egypt. We enter the world of the ancient Egyptians and explore their views on life and death, Egypt and the outside world, humanity and the divine. The book draws on texts found on some thirty artifacts ranging from coffins to stelae to obelisks found in museums in Egypt, America, and Europe, and selected across two thousand years. The texts are then explained clearly, and are supported by full translations, photographs, and line drawings.

*Egyptian Grammar* Walter de Gruyter GmbH & Co KG

This volume covers the alterations that were performed by Pentawaret, the scribe of P. Sallier III, when he decided to copy the entire text of the Battle of Kadesh. (Temp.: Ramesses II). The work covers his difficulties with syntax and morphology, but also treats the literary aspects of the original composition. The intellectual background to Pentawaret and his associates, especially their political and literary milieu, are covered. A specialized chapter treats the palaeography of P. Sallier III, and additional ones provide the necessary background data concerning the style of the copy and its relationship to the original hieroglyphic version. The final chapter provides a detailed analysis of Egyptian military compositions as literature, and a new unpublished war account of Ramesses III, in hieratic, rounds out the work.

**The Arts of Making in Ancient Egypt** OUP Oxford

In *Ancient Egyptian Phonology*, James Allen studies the sounds of the language spoken by the ancient Egyptians through application of the most recent methodological advances for phonological reconstruction. Using the internal evidence of the language, he proceeds from individual vowels and consonants to the sound of actual ancient Egyptian texts. Allen also explores variants, alternants, and the development of sound in texts, and touches on external evidence from Afroasiatic cognate languages. The most up to date work on this topic, *Ancient Egyptian Phonology* is an essential resource for Egyptologists and will also be of interest to scholars and linguists of African and Semitic languages.

**Ancient Egyptian** John Wiley & Sons

A convenient, portable paperback derived from the acclaimed Cambridge Encyclopedia of the World's Ancient Languages.

[A History of Ancient Egypt](#) Oxford University Press

This is the introductory volume to the first dictionary on etymological relations between ancient Egyptian and other Afro-Asian languages, providing the users with a comprehensive analysis of the Afro-Asiatic background of the Egyptian consonant system, a critical appraisal of linguistic theories on Egyptian historical phonology, the problems surrounding the origins of the Egyptian language, and an extensive bibliography to the dictionary volumes to appear.

*Egyptian Grammar* Penn State Press

The Egyptian language, with its written documentation spreading from the Early Bronze Age

(Ancient Egyptian) to Christian times (Coptic), has rarely been the object of typological studies, grammatical analysis mainly serving philological purposes. This volume offers now a detailed analysis and a diachronic discussion of the non-verbal patterns of the Egyptian language, from the Pyramid Texts (Earlier Egyptian) to Coptic (Later Egyptian), based on an extensive use of data, especially for later phases. By providing a narrative contextualisation and a linguistic glossing of all examples, it addresses the needs not only of students of Egyptian and Coptic, but also of a linguistic readership. After an introduction into the basic typological features of Egyptian, the main book chapters address morphology, syntax, semantics and pragmatics of the three non-verbal sentence types documented throughout the history of this language: the adverbial sentence, the nominal sentence and the adjectival sentence. These patterns also appear in a variety of clausal environments and can be embedded in verbal constructions. This book provides an ideal introduction into the study of Egyptian historical grammar and an indispensable companion for philological reading.

**Prophets, Lovers and Giraffes** Ancient Egyptian

Nicholas Ostler's *Empires of the Word* is the first history of the world's great tongues, gloriously celebrating the wonder of words that binds communities together and makes possible both the living of a common history and the telling of it. From the uncanny resilience of Chinese through twenty centuries of invasions to the engaging self-regard of Greek and to the struggles that gave birth to the languages of modern Europe, these epic achievements and more are brilliantly explored, as are the fascinating failures of once "universal" languages. A splendid, authoritative, and remarkable work, it demonstrates how the language history of the world eloquently reveals the real character of our planet's diverse peoples and prepares us for a linguistic future full of surprises.

[Egyptian Hieroglyphs for Complete Beginners](#) Harper Collins

Pyramids have been around for thousands of years, but we still don't know exactly how they were built. The oldest pyramids are found at Giza and Saqqara. The Great Pyramid at Giza is one of the Seven Wonders of the World and was built during the fourth dynasty (2575-2150 BC). During this time, there was also an increase in writing, literature, and artisanship. The Westcar Papyrus tells us of three royal women who lived during the 4th dynasty: Khufu's mother Henutsen, his wife Hetepheres I, and her sister Meresankh II. The latter was also his daughter-in-law because she married his son Khafre (ruled 2558-2532 BC). She may have been buried inside this pyramid when she died at age 26. The first hieroglyphic text was written on papyrus in about 3100 B.C. It is from a chapter from *The Book Of Journey To Heaven* (called book 6), which describes how Ra travels with Thoth as they visit each nome (district) throughout Egypt during a period called "the Festival Of Night," where they praise Osiris while traveling through space towards his underworld kingdom every year at midnight between June 21st/22nd - July 21st/22nd when Orion rises as Sirius sets below it just before dawn on these days known later as Dog Days because dogs often suffer heat exhaustion then too due to lack of moisture caused by intense sunlight reflecting off asphalt surfaces like sidewalks or blacktop parking lots heating up too much due to all that reflected energy bouncing back into our faces which makes us sweat which causes dehydration if we don't drink enough water!

[Language Contact in Ancient Egypt](#) John Wiley & Sons

This volume presents the Egyptian-Coptic language in cross-linguistic ('typological') perspective. It is aimed at linguists of all stripes, especially typologists, historical linguists, and specialists in Egyptian-Coptic, Afroasiatic languages, or African languages. Uniquely, the contributions are written by both typologists and experts of Egyptian-Coptic and typologists. The former provide case studies dealing with particular aspects of the various phases of the Egyptian-Coptic language (e.g., COLLIER on conditional constructions), while the latter situate Egyptian-Coptic data in cross-linguistic perspective (e.g., those by GUELDEMANN and GENSLER). The volume also includes an introductory section that includes an overview of the Egyptian-Coptic language (HASPELMATH), a sketch of its sociohistorical setting (GROSSMAN & RICHTER), its relationship with language typology (RICHTER), and the way in which Egyptian-Coptic data should be presented to nonspecialists, focusing on transliteration and glossing (GROSSMAN & HASPELMATH). This is the first book to bring together language typology and the Egyptian-Coptic language in an explicit fashion.

**Etymological Dictionary of Egyptian, Volume 1** Univ of California Press

Ancient cultures have left written evidence of a variety of scientific texts. But how can/should they be translated? Is it possible to use modern concepts (and terminology) in their translation and which consequences result from this practice? Scholars of various disciplines discuss the practice of translating ancient scientific texts and present examples of these texts and their translations.

**The Ancient Languages of Mesopotamia, Egypt and Aksum** Oxford University Press, USA

This book offers a comprehensive, self-contained introduction to one of the oldest known recorded languages—Hieroglyphic Egyptian. Unlike other approaches, it is geared toward learning to read one of the masterpieces of Middle Egyptian literature, the story "Shipwrecked Sailor," written around 2200 bce. The text's eighteen lessons—organized around such topics as the body, flora, fauna, titles, administration, religion, sexuality, and warfare—cover all the basic grammar and syntax of Middle Egyptian. The book includes exercises for each chapter, sign lists, Egyptian/English and English/Egyptian dictionaries defining all the words and phrases used in the lessons, and a new edition of the tale "Shipwrecked Sailor" with facing commentary. Although the overall approach is literary, Hieroglyphic Egyptian can also be used as an introduction to reading other material, such as biographical inscriptions, religious texts, historical annals, and mathematical or medical papyri. The text is suitable for classroom use, as well as for those who want to learn independently.

**Visual and Written Culture in Ancient Egypt** National Geographic Books

This book provides an innovative analysis of the conditions of ancient Egyptian craftsmanship in the light of the archaeology of production, linguistic analysis, visual representation and ethnographic research. During the past decades, the "imaginative" figure of ancient Egyptian material producers has moved from "workers" to "artisans" and, most recently, to "artists". In a search for a fuller understanding of the pragmatics of material production in past societies, and moving away from a series of modern preconceptions, this volume aims to analyse the mechanisms of material production in Egypt during the Middle Bronze Age (2000-1550 BC), to approach the profile of ancient Egyptian craftsmen through their own words, images and artefacts, and to trace possible modes of circulation of ideas among craftsmen in material production. The studies in the volume address the mechanisms of ancient production in Middle Bronze Age Egypt, the circulation of ideas among craftsmen, and the profiles of the people involved, based on the material traces, including depictions

and writings, the ancient craftsmen themselves left and produced.

**Non-Verbal Predication in Ancient Egyptian** BRILL

This is an account of the rise and fall of the civilization in the Nile Valley, covering the first human settlement (c 120,000 BC) to its conquest by Alexander the Great in 333 BC. This is the first history of ancient Egypt for 25 years. Brings together the very latest textual and archaeological evidence. The index, bibliography and appendices make this an invaluable reference tool. New guide to further reading in English especially commissioned for the paperback edition.

**Language and Identity in Modern Egypt** Cambridge University Press

(Auto-)biography is a genre of ancient Egyptian written discourse that was central to high culture from its earliest periods. Belonging to the nonroyal elites, these texts present aspects of individual lives and experience, sometimes as narratives of key events, sometimes as characterizations of personal qualities. Egyptian (auto-) biographies offer a unique opportunity to examine the ways in which individuals fashioned distinctive selves for display and the significance of the physical, religious, and social contexts they selected. The present volume brings together specialists from a range of relevant periods, approaches, and interests. The studies collected here examine Egyptian (auto-)biographies from a variety of complementary perspectives: (1) anthropological and contrastive perspectives; (2) the original Old Kingdom settings; (3) text format and language; (4) social dimensions; and (5) religious experience.

**The Language of Ramesses** LIT Verlag Münster

This book provides the first comprehensive introduction to the field of language contact and multilingualism in ancient Egypt before the Greco-Roman period (4th millennium BCE–4th c. BCE). It gives a survey of the historical evidence of linguistic interference of Egyptian with languages in Africa, the Near East and the Mediterranean, discusses the different attested phenomena of language contact and offers a case study of foreign language communities in ancient Egypt. Detailed indexes makes this book a rich source of linguistic information for general linguistics and neighboring disciplines.

**Egypt** Wiley-Blackwell

This student-friendly introduction to the archaeology of ancient Egypt guides readers from the Paleolithic to the Greco-Roman periods, and has now been updated to include recent discoveries and new illustrations. • Superbly illustrated with photographs, maps, and site plans, with additional illustrations in this new edition • Organized into 11 chapters, covering: the history of Egyptology and Egyptian archaeology; prehistoric and pharaonic chronology and the ancient Egyptian language; geography, resources, and environment; and seven chapters organized chronologically and devoted to specific archaeological sites and evidence • Includes sections on salient topics such as the constructing the Great Pyramid at Giza and the process of mummification

**Translating Writings of Early Scholars in the Ancient Near East, Egypt, Greece and Rome** Cambridge University Press

Friedrich Junge's pioneering introduction to the grammar of Late Egyptian, the language of the New Kingdom, fills a longstanding gap in teaching works for Ancient Egyptian. The English translation of the second German edition makes the work available to a wide audience.

**Ancient Egyptian Biographies** Edinburgh University Press

The language of Ancient Egypt has been the object of careful investigation since its decipherment in the nineteenth century, but this is the first accessible account that uses the insight of modern linguistics. Antonio Loprieno discusses the hieroglyphic system and its cursive varieties, and the phonology, morphology and syntax of Ancient Egyptian, as well as looking at its genetic ties with other languages of the Near East. This book will be indispensable for both linguists and Egyptologists.

*Pyramids and Literature in Ancient Egypt* Oxford University Press, USA

This book provides a unique perspective on the linguistic relationships between the Ancient Egyptian

and Bantu languages of East/Central/Southern Africa. It will be of interest to readers of Egyptology, linguists, students, and the wider public who wish to find out more about the structure of the Ancient Egyptian language and how it connects with other languages, particularly with Bantu languages. The subject matter is different from other books as it examines the etymology of words, together with their sound/meaning relationships and shows by using verifiable hieroglyphic forms how Ancient Egyptian words may be pronounced by inserting Bantu vowels which fit the meanings derived from the skeletal templates of consonants in the Ancient Egyptian language.
