 SP ... Network synthesis is a design technique for linear electrical  
 circuits. Synthesis starts from a prescribed impedance function of  
 frequency or frequency response and then determines the  
 possible networks that will produce the required response. The  
 technique is to be compared to network analysis in which the  
 response of a given circuit is calculated. Network synthesis was a  
 great leap forward in circuit design. Prior to network synthesis,  
 only network analysis was available, but this requires the Network

 are signal processing filters designed by the network synthesis  
 method. The method has produced several important classes of  
 filter including the Butterworth filter, the Chebyshev filter and the

Elliptic filter. It was originally intended to be applied to the design  
 of passive linear analogue filters but its results can also be  
 applied to implementations in active filters and digital filters. The  
 essence of the method is to obtain the component values of the
