The 11th International Symposium on Distributed Computing and Artificial Intelligence 2014 (DCAI 2014) is a forum to present applications of innovative techniques for studying and solving complex problems. The exchange of ideas between scientists and technicians from both the academic and industrial sector is essential to facilitate the development of systems that can meet the ever-increasing demands of today's society. The present edition brings together past experience, current work and promising future trends associated with distributed computing,

artificial intelligence and their application in order to provide efficient solutions to real problems. This year's technical program presents both high quality and diversity, with contributions in well-established and evolving areas of research (Algeria, Brazil, China, Croatia, Czech Republic, Denmark, France, Germany, Ireland, Italy, Japan, Malaysia, Mexico, Poland, Portugal, Republic of Korea, Spain, Taiwan, Tunisia, Ukraine, United Kingdom), representing a truly "wide area network" of research activity. DCAI'14 Special Sessions have been a very useful tool in order to complement the regular program with new or emerging topics of particular interest to the participating community. Special Sessions that emphasize on multi-disciplinary and transversal aspects, such as AI-driven methods for Multimodal Networks and Processes Modeling and Multi-Agents Macroeconomics have been especially encouraged and welcome. This symposium is organized by the Bioinformatics, Intelligent System and Educational Technology Research Group (<http://bisite.usal.es/>) of the University of Salamanca. The present edition was held in Salamanca, Spain, from 4th to 6th June 2014.

Latin America, a region that is constantly recognized as one of the top economies in the world, is growing at an amazing rate. Although Latin America is doing very good, it is facing a severe problem—the local talent is not receiving the correct attention. Every time I talk to managers of large multinational corporations and professors about the talent and human resources in Latin America, I always seem to find a consensus: most of the local talent is not well trained. According to them, key positions inside mid and largesized companies are rarely occupied by local talent. Corporations fill the hole with foreign talent which is more expensive and difficult to find. This could be Latin America's Achilles' heel. I personally understand that developing Leadership, Management skills and Entrepreneurship takes time, and that in some cases, that time will be wasted, but it amuses me how some companies complain about the talent and they don't take the time to develop it. They rely on employees from other companies to fill the empty spots. Companies in Latin America need to start working proactively and not reactively. Over the last 10 years, economic growth averaged 4.2%, and 70 million people escaped poverty. Macroeconomic stability, open-trade policies and pro-business investment climates have supported and will continue to support strong growth in the years to come. Crucially, economic gains are being broadly shared. Latin America grew by 50 million people between 2003 and 2009, an increase of 50%. For a region long riven by wealth inequality, this is a remarkable achievement. The importance of family and personal relationships also impacts the workplace. For example, it is more common in Latin America to seek employment with family members, hire family members, and look to the family for

help in times of need. In addition, many Latin Americans feel more comfortable doing business with people they know personally, and developing that relationship is often considered an essential first step. Americans who try to move things along more quickly and “get to the point” may become frustrated and/or offend Latin Americans. This means that establishing business contacts and closing deals are best done in person, and may take more time than is customary in the U.S.

Quality Software Project Management Ali Sahin SARIZEYBEK Enterprises today realise their many plans for innovation and change through projects. This is necessary to meet the challenges posed by globalisation, market dynamics and tough competition. However, successful innovation can only be achieved when projects are based on a broad professional and methodical foundation. Moreover, modern project management depends on a comprehensive and forward-looking management system. The efficiency of this system stems from an optimal interaction of the elements of the system, as well as its integration within the enterprise. The application of classic project development techniques will, for instance, deliver a purely functional result. However, what is also important is a properly conducted approach to change management that also

supports the psychological change process, through which all the people involved must go, in a professional manner. This book highlights the fact that project management is far more than merely trendy. With the aid of numerous diagrams, it delivers a real knowledge of project management independent of field of specialisation and level of hierarchy. Thanks to clear and reader-friendly language, concise learning aids such as learning objectives and an instructive case study, this book allows the complex subject of modern project management to be studied independently in an interesting way. As Managing Director of SPOL AG, Bruno Jenny realizes and accompanies various projects at various hierarchical levels with internationally active insurance, banking and industrial concerns as well as public authorities. In this function he has been able to gather a great deal of project-related experience through functional as well as psychological changes on the strategic and operative levels. As a lecturer, coach and testing expert the author is a well-versed authority on the current educational scene. In many lectures at public and internal management seminars as well as by means of various publications he communicates professional project management as a pioneering management system. He is a pioneering personality in the realm of modern project management. The findings published in this book are essentially characterized by his experiences. German version of the book (new edition!): Projektmanagement – Das Wissen für eine erfolgreiche Karriere.

Professional Travel Agency Management AuthorHouse Dialogue and Learning in Mathematics Education is concerned with communication in mathematics class-rooms. In a series of empirical studies of project work, we follow students' inquiry cooperation as well as students' obstructions to inquiry cooperation. Both are considered important for a theory of learning mathematics. Special attention is paid to the notions of 'dialogue' and 'critique'. A central idea is that 'dialogue' supports 'critical learning of mathematics'. The link between dialogue and critique is developed further by including the notions of 'intention' and 'reflection'. Thus a theory of learning mathematics is developed which is resonant with critical mathematics education.

Public administration is a craft that demands real-world application of concepts and theories often learned in a classroom. Yet many students find it difficult to make the leap from theory to practice completely unaided. The Public Administration

Workbook, 8e is specifically designed with the theoretically-grounded, practice-minded student in mind. It reviews scholarship in political science, law, industrial psychology, and the sociology of organizations and then allows students to see how these intellectual fields inform the analytical and managerial tasks that comprise public administration. Where standard public administration textbooks examine the nature of public agencies and explain how bureaucracies relate to other institutions, this workbook promotes a more effective way of learning—by doing—and more directly prepares those who will pursue careers in public agencies. Each chapter begins with a discussion of relevant concepts and scholarship before moving into a hands-on exercise analyzing core analytical and management challenges. This edition includes an all-new exercise on contract negotiation, many international examples interwoven throughout the book, and a fully updated HRM section to reflect alternative ranking and compensation systems. Each chapter is further supported by a detailed Instructor's Manual written by the author to guide instructors on solutions, explanations, and ideas for using or modifying the exercises to fit a variety of course needs, as well as downloadable datasets and exercises, providing students with a unique opportunity to apply and test classroom concepts outside of the job.
