"Read [him] with pencil in hand, make notes, and hope that somehow our country and the world will soon come to see the truth that is told here." —The New York Times Book Review In this collection of essays, first published in 1993, Wendell Berry continues his work as one of America's most necessary social commentators. With wisdom and clear, ringing prose, he tackles head-on some of the most difficult problems confronting us near the end of the twentieth century—problems we still face today. Berry elucidates connections between sexual brutality and economic brutality, and the role of art and free speech. He forcefully addresses America's unabashed pursuit of self-liberation, which he says is "still the strongest force now operating in our society." As individuals turn away from their community, they conform to a "rootless and placeless monoculture of commercial expectations and products," buying into the very economic system that is destroying the earth, our communities, and all they represent.

It's not that they do not create positive business outcomes, it's that they have a hard time demonstrating value for the money spent. As a result, many IT leaders find themselves trapped in a vicious cycle of defending their budgets, cutting resources when times are tight, and struggling to keep pace with an insatiable business appetite for innovation. Meanwhile, business leaders increasingly rely on the cloud and other third parties for their technology needs, finding clear tradeoffs between cost, features, risk, and speed of delivery at their fingertips. CIOs must not only compete with these alternatives, they must embrace the new reality of a multi-sourced, service-oriented world.Many IT leaders are taking a more proactive approach to optimizing value. By using shared facts about cost, consumption, quality, risk and performance, hundreds of CIOs have empowered value conversations centered on cost-for-performance, business-aligned portfolios, investments in innovation and enterprise agility. The tradeoffs they've illuminated changed the tone of their meetings and instilled a business mindset in IT decisions.By reading this book, you'll discover and learn the following:-A practical, applied framework -- called Technology Business Management -- for creating and using shared facts to make better decisions about people, technologies, services and investments-A standard taxonomy of resources, technologies and services for CIOs to translate between IT, financial, and business perspectives-Creating transparency to empower decision makers, demonstrate cost-efficiency, shape demand and plan in step with the business-What your technology business model says about the value you deliver and the disciplines you employ-How to shift from project portfolio

management to service portfolio management to both improve alignment and adopt more agile approaches to innovation and development-How to optimize run-the-business spending by optimizing infrastructure, outsources, labor and services and rationalizing your portfolios for better alignment-How to improve your ability to change the business by better governing innovation investments and improving enterprise agility-How to create and execute a roadmap for improving data and decision making capabilities over time while reaping rewards at every stage of maturity **Stronger Than Hatred** Springer Science & Business Media Globalization has provoked passionate debate and street demonstrations reminiscent of May 1968. The central question of Europe and Globalization is 'what did Europe do for globalization in the past, and what is globalization doing for Europe today?' The contributors to the volume assess this complex process, and Europe's role within it. Bringing together a team of leading international scholars from different disciplinary backgrounds, this is a valuable and wide-ranging contribution to the debate.

Summer schools serve multiple purposes for students, families, educators, and communities. The current demand for summer programs is driven by changes in American families and by calls for

an educational system that is competitive globally and embodies higher academic standards. This monograph details a research synthesis that uses both meta-analytic and narrative procedures to integrate the results of 93 evaluations of summer schools. These and other findings are then examined for their implications for future research, public policy, and implementation of summer programs.

FUNDAMENTALS OF INTERNATIONAL BUSINESS

Course: Principles of Management is the introductory course taken by most undergraduate business majors. Almost every text/course is organized around the four functions of management: planning, leading, organizing, and controlling (PLOC). What makes the texts different are their approach to the subject (principles vs. OB focused) and their strengths of coverage (high/strategic vs. low level/applied/skills). The aim of this text is to show how the four functions interact.
