I just wanted to see you. Before the end. A taut psychological thriller about obsession, fame and betrayal, for fans of Black Mirror. Cat is in love. Always the sensible one, she can't believe that she's actually dating, not to mention dating a star. But the fandom can't know. They would eat her alive. And first at the buffet would definitely be her best friend, Evie. Amy uses Heartstream, a social media app that allows others to feel your emotions. She broadcasted every moment of her mother's degenerative illness, and her grief following her death. It's the realest, rawest reality TV imaginable. But on the day of Amy's mother's funeral, Amy finds a

strange woman in her kitchen. She's rigged herself and the house with explosives - and she's been waiting to talk to Amy for a long time. Who is she? A crazed fan? What does she want? Amy and Cat are about to discover how far true obsession can go.

This is an attempt to spread some cheer and positive vibes at a time when there is an almost all-pervading gloom – largely triggered by the pandemic. The author has used his phenomenal memory to chronicle the instances narrated by luminaries like his family elders, school teachers, instructors from an in-service training institution and professional colleagues.

There is also a section about some memorable programmes beamed over All India Radio. The readers will find that the book covers a wide gamut that includes humour, pragmatism, and life-skills. It could also be seen that the central characters in these instances are not well-known personalities (about whom most of us have already read or heard a lot). Instead, the 'narrators' have been persons with whom most of us can easily identify.

The Cryogenic On-Orbit Liquid Depot Storage, Acquisition, and Transfer Satellite (COLD-SAT) is an experimental spacecraft launched from an expendable launch vehicle which is designed to investigate the systems and technologies required for efficient, effective, and reliable management of cryogenic fluid in the reduced gravity space environment. The COLD-SAT program will provide the necessary data base and provide low-g proving of fluid and thermal models of cryogenic storage, transfer, and resupply concepts and processes. A conceptual approach was developed and an overview of the results of the 24 month COLD-SAT Phase A feasibility is described which includes: (1) a definition of the technology

needs and the accompanying experimental 3 month baseline mission; (2) a description of the experiment subsystem, major features and rationale for satisfaction of primary and secondary experiment requirements using liquid hydrogen as the test fluid; and (3) a presentation of the conceptual design of the COLD-SAT spacecraft subsystems which support the on-orbit experiment with emphasis on areas of greatest challenge. Instead of merely medicating the symptoms of depression, Neil Nedley, MD (a practicing internal medicine specialist) has sought to find a cure for this lonely, debilitating disease in his latest book, 'Depression: The Way Out.' In his straightforward writing style, Dr. Nedley gives you a well-referenced, in-depth comprehension of how depression affects the person mentally, physically, emotionally, and spiritually. For those in

the grip of this dark disease, Dr. Nedley brings hope with his successful twenty-week cure that has brought relief to so many of his patients.

This book analyses the impact of HIV and AIDS on performance in the twenty-first century from an international perspective. It marks a necessary reaffirmation of the productive power of performance to respond to a public and political health crisis and act as a mode of resistance to cultural amnesia, discrimination and stigmatisation. It sets out a number of challenges and contexts for HIV and AIDS performance in the twenty-first century, including: the financial interests of the pharmaceutical industry; the unequal access to treatment and prevention technologies in the Global North and Global South; the problematic division between dominant (white, gay, urban, cis-male) and marginalised narratives of HIV;

the tension between a damaging cultural amnesia and a potentially equally damaging partner 'AIDS nostalgia'; the criminalisation of HIV non-disclosure; and, sustaining and sustained by all of these, the ongoing stigmatisation of people living with HIV. This collection presents work from a vast range of contexts, grouped around four main areas: women's voices and experiences; generations, memories and temporalities; inter/national narratives; and artistic and personal reflections and interventions.

Classic radical feminist statement from the woman who shot Andy Warhol "Life in this society being, at best, an utter bore and no aspect of society being at all relevant to women, there remains to civic-minded, responsible, thrill-seeking females only to overthrow the government, eliminate the money system, institute complete automation and destroy the male sex."

Outrageous and violent, SCUM Manifesto was widely lambasted when it first appeared in 1968. Valerie Solanas, the woman who shot Andy Warhol, self-published the book just before she became a notorious household name and was confined to a mental institution. But for all its vitriol, it is impossible to dismiss as the mere rantings of a lesbian lunatic. In fact, the work has proved prescient, not only as a radical feminist analysis light years ahead of its time—predicting artificial insemination, ATMs, a feminist uprising against underrepresentation in the arts—but also as a stunning testament to the rage of an abused and destitute woman. In this edition, philosopher Avital Ronell's introduction reconsiders the evocative exuberance of this infamous text.

One of today's most original thinkers on gender offers a provocative take on the current feminist movement, exploring "desire as the force shaping our identities, the paradoxes of liberation politics, and her own gender transition" (Bookforum). "[Females] is always smart, sometimes sincere, and unpredictable about when it will pinch your arm or clutch its nails

around your heart." —Vice Everyone is female, and everyone hates it. Females is Andrea Long Chu's genre-defying investigation into sex and lies, desperate artists and reckless politics, the smothering embrace of gender and the punishing force of desire. Drawing inspiration from a forgotten play by Valerie Solanas—the woman who wrote the SCUM Manifesto and shot Andy Warhol—Chu aims her searing wit and surgical intuition at targets ranging from performance art to psychoanalysis, incels to porn. She even has a few barbs reserved for feminists like herself. Each step of the way, she defends the indefensible claim that femaleness is less a biological state and more a fatal existential condition that afflicts the entire human race—men, women, and everyone else. Or maybe she's just projecting. A thrilling new voice who has been credited with launching the "second wave" of trans studies, Chu shows readers how to write for your life, baring her innermost self with a morbid sense of humor and a mordant kind of hope.

Until 1986, the farmhouse al-'Udhaibat was a tumbledown, neglected mud-brick ruin, no different from many other such old buildings which have survived in Saudi Arabia. It was unmaintained and-- as all buildings of sun-dried mud will, if left-- was quietly sliding into oblivion. The restoration of this farmhouse developed into a complex project, with important implications for rural housing and the place of traditional materials in modern building. Al-'Udhaibat has become a source of inspiration for the new generation of Saudi architects.

Bi Any Other Name Turtleback Books

"I am part of the generation that came of age when *Bi Any Other Name* was already in print. This groundbreaking anthology gave me the language, courage and sense of community I needed as a young queer woman." —Daisy Hernández, *A Cup of Water Under My Bed* The 25th Anniversary Edition *Bi Any Other Name: Bisexual People Speak Out* first debuted in 1991. This groundbreaking book helped catalyze a national movement for bisexual identity, justice and equality. Often dubbed "the

bisexual bible," *Bi Any Other Name* was on Lambda Book Review's Top 100 GLBT Books of the 20th century and became a beloved reference text in many classrooms, doctors' offices, libraries, and pulpits. A 2007 Mandarin translation was published in Taiwan. The new 2015 introduction of this book updates readers to the enormous changes the past quarter century has brought – for bi people, the larger society and the sexual rights and liberation movement of which we are a part. When did you know? How did you come out? What was your experience? The coming out stories in this book speak to the many ways bisexuals embrace realities outside rigid either/or categories throughout the passage of our lives. Everyday stories of women, men, transgender bisexuals, teenagers to octogenarians, from many different cultures and family arrangements. The fierce truth of these lives made visible puts a check on bisexual erasure, exposing the binary constructions of gay/straight and male/female as oversimplifications that reduce spectrums to mere opposites. Caught between the mainstream culture's persistent

discounting of bisexuality, the sensationalizing characterizations presented in media, and the sexual liberation movement's continual disregard of bisexuality as a serious identity, bisexual people are often not seen or heard when they speak out. There is a vital need for these earnest voices to be heard in the new century. Enormous cultural changes have occurred in the past 25 years, yes, but understanding bisexualities has just begun.

In 1956, three groups independently reported evidence that some thyroid disease appearing spontaneously in humans or experimentally induced in animals are related to autoimmune processes. The interval between these landmark discoveries and the present has witnessed a remarkable and continuing growth of both knowledge and concepts concerning the mechanisms of immune regulation, the pathogenesis of autoimmune thyroid diseases, and their clinical and laboratory manifestations. More importantly knowledge of thyroid autoimmunity has, in many respects,

comprised the vanguard of an ever increasing appreciation and understanding of autoimmune diseases in general. On November 24-26 1986, an International Symposium on Thyroid Autoimmunity was held in Pisa. Its purpose was to commemorate the birth of thyroid autoimmunity as a scientific discipline, to summarize current knowledge and concepts in this area, and where possible, to anticipate areas of opportunity for the future - hence the theme of the Symposium, Memories and Perspectives. To open the meeting, the Magnifico Rettore (Chancellor) of the University of Pisa granted special Awards to Dr. Deborah Doniach, Dr. Ivan Roitt, and Dr. Noel R. Rose, who published the first fundamental studies in the field of thyroid

autoimmunity, and to Dr. Duncan G. Adams, whose discovery of the long-acting thyroid stimulator (LATS) opened the door to our current understanding of the pathogenesis of Graves' disease. During the meeting thirty plenary lectures were presented.

This book focuses on data describing the roles of free radicals and related reactive species, and antioxidants, in the causes and treatments of diseases, examining both clinical and pre-clinical trials, as well as basic research. The book is divided into sub-sections with chapters on toxicological mechanisms, agents that produce toxicity, and special topics including areas such as

antioxidant supplements, oxygen toxicity, toxicogenomics, and marine biology. Studies on Experimental Toxicology and Pharmacology promotes the concept of using biomarkers of free radical- and reactive species-induced injury as adjuncts to classical laboratory testing and the ability of antioxidants to provide cellular protection. There is increasing evidence that free radicals and other reactive species are causative, or at least supporting factors, that impact organisms and cause numerous tissue disorders. With contributions from international experts in the field, this volume is a valuable resource for researchers and postgraduate students in toxicology and related fields, as well as clinicians and clinical researchers.
