Cannabis CABI

Cannabis sativa is best known as the source of marijuana, the world's most widely consumed illicit recreational drug. However, the plant is also extremely useful as a source of stem fiber, edible seed oil, and medicinal compounds, all of which are undergoing extremely promising research, technological applications, and business investment. Indeed, despite its capacity for harm as a recreational drug, cannabis has phenomenal potential for providing new products to benefit society and for generating extensive employment and huge profits. Misguided policies, until recently, have prevented legitimate research on the beneficial properties of cannabis, but there is now an explosion of societal, scientific, and political support to reappraise and remove some of the barriers to usage. Unfortunately, there is also a corresponding dearth of objective analysis. Towards redressing the limitation of information, Cannabis: A Complete Guide is a comprehensive reference summarizing botanical, business, chemical, ecological, genetic, historical, horticultural, legal, and medical considerations that are critical for the wise advancement and management of cannabis in its various forms. This book documents both the risks and benefits of what is indisputably one of the world's most important species. The conflicting claims for medicinal virtues and toxicological vices are examined, based mainly on the most recent authoritative scientific reviews. The attempt is made consistently to reflect majority scientific opinion, although many aspects of cannabis are controversial. Aside from the relevance to specialists, the general public should find the presentation attractive because of the huge interest today in marijuana. Unfortunately, society has become so specialized and compartmentalized that most people have limited appreciation of the importance of science to their lives, except when a topic like marijuana becomes sensationalized. This review of cannabis can serve as a vehicle for public education in the realm of science and technology. Indeed, towards the goal of disseminating the important information in this book to a wide audience, the presentation is user-friendly, concise, and well-illustrated in the hope that non-specialists will find the topics both informative and entertaining.

if you're interested in breeding your own cannabis strain but find scientific jargon confusing, and graphs and punnet squares put you to sleep, this is the book for you. This book entails all you need to know about breeding marijuana at home and how to preserve those precious fire clone-only genetics.Cannabis breeders typically breed to purify and strengthen strains, combine strain traits, or enhance specific characteristics like higher yields, specific aromas, potency, and many other things.When growing and breeding, it's important to know where your seeds come from and what kind of genetics they have.Cannabis Breeding isn't just a technical manual, it's a fresh, energetic take on the genetic history and future of cannabis; not just the plant's origins and the story of its global spread, but the history of how cannabis, as we know it, got that way. Cannabis genetics continue to change. Cannabis Breeding takes stock of what growers can do to preserve what's good about the plant, while also chasing what's new.The book covers material other cultivation manuals don't, providing a deep but accessible primer on the theory and practice of cannabis breeding that will inform the novice and educate experienced breeders on the latest advancements in technology and methodology.

Marijuana Harvest is the first book devoted entirely to cannabis harvesting. In it, Ed Rosenthal and David Downs explain how to ensure the perfect harvest—everything from recognizing when it's time to pick, to storage techniques to keep your buds fresh. Marijuana Harvest is the most important cultivation tool of the season. Readers will learn: Flushing: How and when to flush Ripening: The best time to pick Manicuring and processing: How to speed it up with new tools for both hand and machine trimming Drying and curing: How to avoid mildew and mold contamination Storing: How to keep your buds fresh and potent Whether you are a hobby gardener or commercial farmer, Marijuana Harvest shows you how to maximize the yield and quality of your garden, identify problems and avoid costly mistakes. The book's stunning, full-color photographs and illustrations make it an attractive guide to the steps needed to harvest, dry, trim, cure and store top-quality buds. Internationally recognized as the number one cultivation author, Ed Rosenthal, along with renowned journalist David Downs, thoroughly researched this book, visiting personal gardens and commercial farms to observe techniques used as well as experimental methods under development. Winners of prestigious cannabis cups are interviewed and share their tips and advice. Content includes time-, labor-, and energy-saving tools and equipment: trimmers, climate controls, drying methods, storage

systems, workflow charts and much more—everything a grower needs to know to do it right. Cut through the clutter of online forums and anecdotal advice to find out how to grow and harvest top-shelf buds, both indoors and out, for use as dried flowers, extracts and edibles. For the casual consumer there are tips on how to choose the best-grown and best-tasting buds available. Marijuana Harvest is an accessible and informative look at harvest methods for all marijuana users and growers. Today, more Americans than ever before have the ability to grow and cultivate marijuana for medical and personal use. As of 2020, 33 states plus Washington, D.C., have laws permitting medical cannabis use, and adult use has been legalized in 11 states and in Washington, D.C.

DJ Short's essays on the craft of indoor cannabis cultivation show how any hobbyist can refine gardening technique and achieve mastery. DJ Short is a celebrated breeder whose collection of seed strains has received international recognition for their premier quality. His first book collects two decades of experience in cannabis cultivation and breeding for the amateur grower. Short's style is both friendly and thoughtful, offering tips for selecting plants and helping the serious hobbyist finesse their garden for high quality. The first section covers cultivation and each environmental factor's contribution to the indoor gardener's success, with an emphasis on organic methods. It includes secrets to customizing lighting, temperature, air circulation, nutrients and supplements. Gardening methods, from sprouting seeds to harvesting and curing are described with quality and flavor in mind. The second section includes essential topics of breeding -- such as selecting plants, collecting pollen, and stabilizing a variety -- with careful consideration of how flavor and quality set a good breeding program apart. Includes photography of Short's varieties and other unique plants throughout, plus 8 full-color pages of exceptional cannabis.

Whether you want to grow 3 plants or 30,000 there are many factors to take into consideration: Would you rather grow a strain that produces 38g per season or one that yields 9 Kilos? Would you rather grow a strain that has a high incidence of unwanted side effects (Anxiety, paranoia, headaches, etc.) or one that has a very low incidence of said effects? Do you want to grow a strain that has a 29%THC level or one that has 5%THC? One that has 0%CBDs or one that has 47%CBDs. Would you like to know which strains are almost totally immune to powdery mildew, fungus and mold or one that is particularly vulnerable to these diseases? One that can grow clear into the snows of Fall or one that needs a Mediterranean climate to thrive? Do you want to grow a strain that produces particularly well under indoor lighting or one that requires an outdoor grow to thrive? A strain that reach only 18" to 24" tall or one that grows to 12 feet? A strain that needs little water or one that requires a good deal of water? Then there are strains that absolutely must have a good deal of support and those that require none at all. Strains that take 20 weeks of flowering (After a long vegetative period) and strains that go from seed to harvest in 28 days. Interested in the medical conditions a given strain is good for? Here you can find over 120 medical conditions are listed among over 500 strains. There are even strains with near zero THC and over 42%CBDs for medical use with no high whatsoever. There are strains that have an intense odor when growing and will alert anyone within several hundreds of yards and there are strains with little odor or even an aroma that smells like something different than marijuana altogether. If you think you are going to get this information in one place - you are right. It is this book. Other than that, I hope you have thousands of hours to read many dozens of books AND search hundreds of web sites. That is what I did for the last two years. These are the results. This is NOT a book strictly about horticultural practices for marijuana in general (though you will find brief comments and an excellent all around organic bug and disease control spray menu here). If you want in depth general marijuana horticultural information there are many sources easily available. George Servantes is one of the best and there are countless videos on You Tube for such information. This book is completely about STRAINS, what they need to grow, how they grow best, and every aspect about each strain.. You will find it invaluable.

“Pollan shines a light on our own nature as well as on our implication in the natural world.” —The New York Times “A wry, informed pastoral.” —The New Yorker The book that helped make Michael Pollan, the New York Times bestselling author of *How to Change Your Mind*, *Cooked* and *The Omnivore’s Dilemma*, one of the most trusted food experts in America Every schoolchild learns about the mutually beneficial dance of honeybees and

flowers: The bee collects nectar and pollen to make honey and, in the process, spreads the flowers’ genes far and wide. In *The Botany of Desire*, Michael Pollan ingeniously demonstrates how people and domesticated plants have formed a similarly reciprocal relationship. He masterfully links four fundamental human desires—sweetness, beauty, intoxication, and control—with the plants that satisfy them: the apple, the tulip, marijuana, and the potato. In telling the stories of four familiar species, Pollan illustrates how the plants have evolved to satisfy humankind’s most basic yearnings. And just as we’ve benefited from these plants, we have also done well by them. So who is really domesticating whom?
