Basic Concepts of Molecular Biology Allied Publishers

This volume covers the various sensors related to automotive and aerospace sectors, discussing their properties as well as how they are realized, calibrated and deployed. Written by experts in the field, it provides a ready reference to product developers, researchers and students working on sensor design and fabrication, and provides perspective on both current and future research.

Health Risk Assessment and Treatment Strategies CRC Press

Semiannual, with semiannual and annual indexes. References to all scientific and technical literature coming from DOE, its laboratories, energy centers, and contractors. Includes all works deriving from DOE, other related government-sponsored information, and foreign nonnuclear information. Arranged under 39 categories, e.g., Biomedical sciences, basic studies; Biomedical sciences, applied studies; Health and safety; and Fusion energy. Entry gives bibliographical information and abstract. Corporate, author, subject, report number indexes.

Characterisation and Quality Control of Nuclear Fuels Graduate Programs in the Physical Sciences and Mathematics Contamination of Water Health Risk Assessment and Treatment Strategies

This comprehensive, fully updated text introduces the essential concepts of Molecular biology to students of life science and those pursuing courses related disciplines. The authors first review the relevant fundamentals of biochemistry and microbiology, introducing key principles that enable molecular biologist to achieve consistent control over biological activity. The text then reflects the advances that are transforming the field, ranging from nucleic acid to gene regulation. It introduces the comparative mechanism studies between prokaryotes and eukaryotes. It also covers multiple choice questions for the practice.

High Tc Update Springer Science & Business Media

Papers presented at the International Conference on Characterisation and Quality Control of Nuclear Fuels, held at Hyderabad in 2002.

A CUMULATIVE AUTHOR LIST REPRESENTING LIBRARY OF CONGRESS PRINTED CARDS AND TITLES REPORTED BY OTHER AMERICAN LIBRARIES

CRC Press

The book explores and exploits the synergy and boundary between biotechnology, bioprocessing and food engineering. Divided into three parts, Advances in Food Bioproducts and Bioprocessing Technologies includes contributions that deal with new developments in procedures, bioproducts, and bioprocesses that can be given quantitative expression. Its 40 chapters will describe how research results can be used in engineering design, include procedures to produce food additives and ingredients, and discuss accounts of experimental or theoretical research and recent advances in food bioproducts and bioprocessing technologies.

Due to the increase in the consumption of herbal medicine, there is a need to know which scientifically based methods are appropriate for assessing the quality of herbal medicines. Fingerprinting has emerged as a suitable technique for quality estimation. Chemical markers are used for evaluation of herbal medicines. Identification and quantification of these chemical markers are crucial for quality control of herbal medicines. This book provides updated knowledge on methodology, quality assessment, toxicity analysis and medicinal values of natural compounds.

INDIAN BOOKS IN PRINT

Elsevier

This work explores the information sources in History of Science in India from all authoritative research journals and analyses them with the aid of suitable scientometric techniques.

BIOFUEL TECHNOLOGIES

EduBubs Publishing House

Devoted to the cause of the advancement of glass, ceramics and allied sciences and industries.

Physikalische Berichte Alpha Science International Limited

Biotechnological Production of Bioactive Compounds provides insights on the most recent innovations, trends, concerns, solutions and practical challenges encountered in the fields of enzyme technology and nanobiotechnology for the production of bioactive materials with extra health benefits. As nanobiotechnology has improved the bioactive extraction process significantly, many bioactives, including bioflavonoids, omega-3 fatty acids, biopigments and low calorie sugar substitutes are a pivotal part of the food industry. The book highlights the production of extra health benefits "bioactives" from plants and microbes and explains how the extraction efficiency of bioactives molecules improves significantly with the recent advances in nanobiotechnology. Researchers in the fields of biochemical engineering, biotechnology, bioremediation, environmental sustainability and those in pharma industries will find the information in this book very helpful and illuminating. Outlines technological advances in bioactives extraction Covers bioflavonoids, biopigments, omega-3-fatty acids and low sugar substitutes Explains the mechanisms of Green cargo (biogenic nanoparticles) for the delivery of bioactive molecules *Fingerprinting Analysis and Quality Control Methods of Herbal Medicines* Amer Chemical Society

Contamination of Water: Health Risk Assessment and Treatment Strategies takes an interconnected look at various pollutants, sources of contamination, the effects of contamination on aquatic ecosystems and human health, and potential mitigation strategies. The book begins by examining the sources of potential contamination, including the current scenario of dyes, heavy metals, pesticides and oils contamination as well as regions impacted due to industrialization, mining or urbanization. It then analyzes various methods of water contamination, assesses health risk and adverse effects on those impacted, and concludes with an exploration of efficient, low-cost treatment technologies that remove toxic pollutants from the water. This book incorporates both theoretical and practical information that will be useful for researchers, professors, graduate students and professionals working on water contamination, environmental and health impacts, and the management and treatment of water resources. Provides practical case studies of various types of contamination and sources in different regions Offers an overview of inorganic and organic contaminants and their impact on human health Evaluates several low-cost, efficient and effective water treatment technologies to remove toxins from water and minimize risk

PHYSICAL CHEMISTRY: A Laboratory Manual has been designed to meet the need of graduate and postgraduate students. The language is simple and the students can perform the experiments themselves without much help from the teacher. In each chapter, complete theory has been introduced before the start of experiment. Each experiment has been designed in a format that is adopted by the students in writing their notebooks. The tables for experimental observations have also been provided. Important precautions, suggestions and further experimental works for advance workers or researchers have been included under heading 'Things to Remember'. The Appendix comprises of sufficient number of tables of physical constants that can help in completing experiments. The book will be very helpful for establishment of laboratory as the Appendix includes list of chemicals and apparatuses. At the end an Index has been provided to help students in searching the things they need.

Physical Chemistry

Includes entries for maps and atlases.

Part 1-3

Biofuels are considered to be the main potential replacement for fossil fuels in the near future. In this book international experts present recent advances in biofuel research and related technologies. Topics include biomethane and biobutanol production, microbial fuel cells, feedstock production, biomass pre-treatment, enzyme hydrolysis, genetic manipulation of microbial cells and their application in the biofuels industry, bioreactor systems, and economical processing technologies for biofuel residues. The chapters provide concise information to help understand the technology-related implications of biofuels development. Moreover, recent updates on biofuel feedstocks, biofuel types, associated co- and byproducts and their applications are highlighted. The book addresses the needs of postgraduate researchers and scientists across diverse disciplines and industrial sectors in which biofuel technologies and related research and experimentation are pursued.
