DILLON WARREN

Emergency Department Critical Care CRC Press

Improve your skills in visual diagnosis Speed and accuracy of diagnosis is the key to saving lives in emergency and critical care medicine. Careful visual inspection of the patient, the data (radiography, electrocardiogram), and related clues can often help providers choose the right diagnosis and ultimately the best treatment - but this knowledge comes with experience. This book provides 110 randomly presented visual diagnosis cases for self-testing, imitating real-life situations found in the emergency department setting. Written by distinguished emergency and critical care physicians, and thoroughly revised and updated throughout, this second edition includes 25% new cases and is an ideal aid for trainees preparing for Board examinations as well as an invaluable 'refresher' for qualified emergency and critical care providers. This title is also available as a mobile App from MedHand Mobile Libraries. Buy it now from Google Play or the MedHand Store.

A COLOR HANDBOOK

Lippincott Williams & Wilkins

Structured in an easily accessible format, chapters present fundamental information in tables, bullet points, and flow diagrams.

Emergency medicine scenarios covered across 38 chapters include acute respiratory failure, spinal cord injuries, seizures and status epilepticus, care of the newborn, and end-of-life care. ROSEN & BARKIN'S 5-MINUTE EMERGENCY MEDICINE CONSULT

John Wiley & Sons

Intensive care medicine is one of the fastest growing services provided by hospitals and perhaps one of the most expensive. Yet in response to the global financial crisis of the last few years, healthcare funding is slowing or decreasing throughout the world. How we manage health care resources in the intensive care unit (ICU) now and in a future that promises only greater cost constraints is the subject of this book, the third in an informal series of volumes providing a global perspective on difficult issues arising in the ICU. Taking 12 developed countries as their focus, leading experts provide a country-by-country analysis of current ICU resource allocation. A second group of experts use the chapters as a departure point to analyze current ICU resource allocation at the level of the global medical village. The process is repeated, but with an eye toward the future – first country by country, then at the global level – that takes into account initiatives and reforms now underway. A fictional healthcare plan, the “Fair & Equitable Healthcare Plan,” is put forth to address weaknesses in existing approaches, and healthcare experts and ethicists are invited to respond to its often provocative provisions. Itself structured as a dialogue, the book is an excellent way to start or to continue serious discussion about the allocation of ICU healthcare resources now and in the years
