.NET 3.5 is Microsoft's largest development software launch since .NET 2.0 and (unlike .NET 3.0) completely replaces all previous .NET versions. A new version of Visual Studio - Visual Studio 'Orcas' is being created for the new Framework together with new versions of both the C# and Visual Basic languages. This book deals with this new C# language and provides developers with a complete treatise on the new technology - explaining the importance of all the new features (lambda expressions, LINQ, ASP.NET AJAX, WPF everywhere) and how they integrate into the framework of the previous .NET versions. It is a comprehensively revised and updated

version of the author's previous award-winning titles.

Evaluasi perkerasan di Bandar Udara sangat perlu dilakukan sebagai salah satu cara untuk mengetahui seberapa besar tingkat kerusakan yang terjadi pada struktur perkerasan tersebut terhadap pembebanan akibat beban pesawat yang terjadi. Tujuan evaluasi ini juga untuk menentukan strategi pemeliharaan yang cocok sehingga perkerasan di Bandar Udara khususnya Runway, Apron, Taxiway dalam kondisi baik selama umur rencana. Metode Evaluasi perkerasan di Bandar

Udara dapat menggunakan beberapa metode antara lain metode CBR dan metode FAA. Melalui evaluasi perkerasan akan didapat hasil perencanaan perbaikan perkerasan, dimana hasil ini dapat membantu dalam penyusunan program rehabilitasi serta penganggaran perbaikan perkerasan di Bandar Udara.

"We have come a long way from Evans-Pritchard's famous dictum that "there is only one method in social anthropology, the comparative method - and that is impossible." Yet a good 40 years later, qualitative social inquiry still has an uneasy relationship with comparison. This volume sets out "thick comparison" as a means to revive "comparing" as a productive process in ethnographic work: a process that helps to revitalise the articulation work inherent in analytical ethnographies; to vary observer perspectives and point towards "blind spots;" to name and create "new things" and modes of empirical work and to give way to intensified dialogues between data analysis and theorizing. Contributors are Katrin Amelang, Stefan Beck, Kati Hannken-Illjes, Alexander Kozin, Henriette Langstrup, Jørg Niewöhner, Thomas Scheffer, Robert Schmidt, Estrid Sørensen, and Britt Ross Winthereik."--Publisher's website.

Roadwork Theory and Practice gives the essential information needed by every road worker, highway technician, incorporated, graduate or chartered engineer, not only by explaining the theory of road construction and its associated activities, but by illustrating its application with practical working methods that are in use in everyday engineering practice. As such, it successfully bridges the gap so often found between civil engineering theory and the day-to-day work of a highways engineer. Now in its fifth edition, this classic textbook has been fully revised in line with recent changes to EU standards, legislation, terminology and specifications. The new edition now includes end of chapter review questions and references for further reading. Students will find this text fully caters for the requirements of BTEC National and NVQ qualifications in construction, civil engineering and highways maintenance. In addition, content has been matched to the specifications of the new Higher Nationals in Civil Engineering from Edexcel. Professionals will find the new edition to be an invaluable up-to-date reference source, especially of relevance to recent graduates new to the work place.

This is a how-to-do-it manual, limited to specific information on the use of asphalt in pavement maintenance. Planning, programming, financing and administration of maintenance are beyond its scope. Usually, money for pavement maintenance is limited and the maintenance man is called upon to "make one dollar do the work of two;" this is not easy. Large differences in soil types,

climate, terrain, traffic and other factors make for greatly varying problems, even within small areas. Some regions are rugged and mountainous while others are fairly smooth and level; some have heavy rainfall, others are semi-arid; some highways and streets must accommodate vehicles carrying coal, ore, logs, or other heavy loads, while others are subjected to only light-weight traffic.

Keberadaan pejalan kaki di jalan memerlukan fasilitas bagi pejalan kaki, salah satunya adalah fasilitas penyeberangan jalan seperti Jembatan Penyeberangan Orang (JPO). JPO dipasang sehingga tidak ada pertemuan sebidang antara arus pejalan kaki dengan arus lalu lintas. Namun demikian, agar pejalan kaki mau untuk menggunakan JPO, selain menjamin keamanan dalam menyeberang juga harus menarik minat para pejalan kaki untuk menggunakan fasilitas tersebut. Pemerintah Kecamatan Widang telah menyediakan JPO bagi pejalan kaki, yang dimaksudkan untuk memudahkan masyarakat setempat melakukan kegiatan penyeberangan jalan dengan aman.

Geosynthetic materials have entered the mainstream in the professional arena and

are no longer considered new construction material. Professionals need to keep up with the nuances of how geosynthetics work. Emphasizes design by function; overviews all types of geosynthetics, with stand-alone units on particular materials. Uses S.I. units for all problems and examples. Expands coverage of containers and tubes in the geotextile chapter. Discusses walls and slope design, including seismic analysis, in the geogrid chapter. Treats wet landfills, agricultural waste, waste stability, and dam waterproofing in the geomembrane chapter. Discusses new products and related performances in the geosynthetic clay liner chapter. Discusses new products and related behavior, including fiber reinforcement and wall drainage, in the geocomposite chapter. Adds a completely new chapter on geofoam. A useful reference for transportation, geotechnical, environmental, and hydraulics professionals and engineers.

This guide is designed to provide direction on the monitoring of traffic characteristics. It begins with a discussion of the structure of traffic characteristics monitoring and traffic counting. The next two sections cover vehicle classification and truck weighing. The last section presents the coordinated record formats for station identification, traffic volume, vehicle classification, and truck weight data.

Webometrics is concerned with measuring aspects of the web: web sites, web pages, parts of web pages, words in web pages, hyperlinks, web search engine results. The importance of the web itself as a

communication medium and for hosting an increasingly wide array of documents, from journal articles to holiday brochures, needs no introduction. Given this huge and easily accessible source of information, there are limitless possibilities for measuring or counting on a huge scale (e.g., the number of web sites, the number of web pages, the number of blogs) or on a smaller scale (e.g., the number of web sites in Ireland, the number of web pages in the CNN web site, the number of blogs mentioning Barack Obama before the 2008 presidential campaign). This book argues that it can be useful for social scientists to measure aspects of the web and explains how this can be achieved on both a small and large scale. The book is intended for social scientists with research topics that are wholly or partly online (e.g., social networks, news, political communication) and social scientists with offline research topics with an online reflection, even if this is not a core component (e.g., diaspora communities, consumer culture, linguistic change). The book is also intended for library and information science students in the belief that the knowledge and techniques described will be useful for them to guide and aid other social scientists in their research. In addition, the techniques and issues are all directly relevant to library and information science research problems.
