“The best explanation
that I have seen of
corrosion on
boats.”—Nigel Calder,
author of Boatowner’s

Mechanical and Electrical
Manual “A powerful
weapon in the war against
metal
deterioration.”—Cruising
World Corrosion is a
constant, often expensive,
and sometimes dangerous
problem for boaters.

Moisture, salt, electrical currents, and chemicals create a potent combination that can attack the metallic (and sometimes nonmetallic) parts of your boat. Everett Collier, an expert in marine technology, details all the types of corrosion—including simple galvanic, electrochemical, and electrolytic—and explains how to identify, combat, and prevent them. The most comprehensive book on this subject, *The Boatowner's Guide to Corrosion* shows you how

to: Prevent corrosion with proper grounding, cathodic protection, protective coatings, and careful selection and matching of metal parts. Protect your boat's hull, deck gear, masts, and rigging, as well as its propulsion, electrical, plumbing, and steering systems. Recognize and cure developing corrosion before it can damage your boat.

In this thorough introduction to theological

anthropology, Joshua Farris offers an evangelical perspective on the topic. Farris walks the reader through some of the most important issues in traditional approaches to anthropology, such as sexuality, posthumanism, and the image of God. He addresses fundamental questions like, *Who am I?* and *Why do I exist?* He also considers the creaturely and divine nature of humans, the body-soul relationship, and the beatific vision. **The Last Shah** London ;

The surprising story of Iran's transformation from America's ally in the Middle East into one of its

staunchest adversaries
"An original interpretation that puts Iranian actors where they belong: at center stage."--Michael Doran, Wall Street Journal
"For the clearest view of Iran for the last 100 years, this book is it."--Marvin Zonis, author of Majestic Failure: The Fall of the Shah Offering a new view of one of America's most important, infamously strained, and widely misunderstood relationships of the postwar era, this book tells the history of America and Iran from the

time the last shah, Mohammad Reza Pahlavi, was placed on the throne in 1941 to the 1979 revolution that brought the present Islamist government to power. This revolution was not, as many believe, the popular overthrow of a powerful and ruthless puppet of the United States; rather, it followed decades of corrosion of Iran's political establishment by an autocratic ruler who demanded fealty but lacked the personal strength to make hard

decisions and, ultimately, lost the support of every sector of Iranian society. Esteemed Middle East scholar Ray Takeyh provides new interpretations of many key events--including the 1953 coup against Prime Minister Mohammad Mossadeq and the rise of Ayatollah Ruhollah Khomeini--significantly revising our understanding of America and Iran's complex and difficult history.

THE POLYMATH

"In 1925 a team of archaeologists was sent by famed archaeologist James Henry Breasted, the Director of the Oriental Institute of the University of Chicago, to search for the city that King Solomon built in the tenth century BCE. These excavations are rightfully famous for the light they shed on one of the most important cities in biblical times: the ancient city of Megiddo, in Israel, the site of Armageddon. The books and articles that the original participants published are still used,

and debated, by archaeologists working in the region today. However, these scholarly publications provide only a small window into the daily activities of the team members and the stories behind their amazing discoveries. Using a treasure trove of other writing - including more than three decades' worth of letters, cablegrams, cards, and diaries, archaeologist and historian Eric Cline, who spent twenty years digging at Megiddo himself, brings the

Chicago excavators and their discoveries to life situating them against the backdrop of the Great Depression in the United States as well as the growing troubles and tensions in British Mandate Palestine. Their story, as recounted by Cline, often reads more like melodrama than dry archaeological report and provides a unique a glimpse of the internal workings of a dig in the early years of biblical archaeology. In the course of telling their story, Cline gives readers the full

picture of an archaeological site from its first discoveries to its most recent excavations placing it all in the larger scheme of the rise and fall of civilizations, from the Neolithic Revolution through the Romans"-- Federal Requirements for Recreational Boats Oxford University Press, USA A tightly argued and expansive examination of the pitfalls of transhumanism that reacquaints us with what it means to live well. Advocates of transhumanism, or

"radical" enhancement, urge us to pursue the biotechnological heightening of select capacities - above all, cognitive ability - so far beyond any human limit that the beings with those capacities would exist on a higher ontological plane. For proponents of such views, humanity's self-transcendence through advancements in science and technology may even be morally required. Consequently, the human stakes of how we respond to transhumanism are immeasurably high. In

Posthuman Bliss? The Failed Promise of Transhumanism, Susan B. Levin challenges transhumanists' overarching commitments regarding the mind and brain, ethics, liberal democracy, knowledge, and reality, showing their notion of humanity's self-transcendence into "posthumanity" to be little more than fantasy. Uniting philosophical with scientific arguments, Levin mounts a significant challenge to transhumanists' claim that science and

technology support their vision of posthumanity. In a clear and engaging style, she dismantles transhumanists' breezy assurances that posthumans will emerge if we but allocate sufficient resources to that end. Far from offering theoretical and practical "proof of concept" for the vision that they urge upon us, Levin argues, transhumanists engage inadequately with cognitive psychology, biology, and neuroscience, often relying on questionable or

outdated views within those fields. Having shown in depth why transhumanism should be rejected, Levin argues forcefully for a holistic perspective on living well that is rooted in Aristotle's virtue ethics but that is adapted to liberal democracy. This holism is thoroughly human, in the best of senses: It directs us to consider worthy ends for us as human beings and to do the irreplaceable work of understanding ourselves rather than relying on technology and science to

be our salvation.

 Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical

and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree

relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

Named a Best Book of

2020 by NPR and Vanity Fair One of Smithsonian's Ten Best Science Books of 2020 "A searching and vital explication of germ theory, social norms, and what the modern era is really doing to our bodies and our psyches."

—Vanity Fair A preventative medicine physician and staff writer for The Atlantic explains the surprising and unintended effects of our hygiene practices in this informative and entertaining introduction to the new science of skin microbes and probiotics.

Keeping skin healthy is a booming industry, and yet it seems like almost no one agrees on what actually works. Confusing messages from health authorities and ineffective treatments have left many people desperate for reliable solutions. An enormous alternative industry is filling the void, selling products that are often of questionable safety and totally unknown effectiveness. In *Clean*, doctor and journalist James Hamblin explores how we got here, examining the science

and culture of how we care for our skin today. He talks to dermatologists, microbiologists, allergists, immunologists, aestheticians, bar-soap enthusiasts, venture capitalists, Amish people, theologians, and straight-up scam artists, trying to figure out what it really means to be clean. He even experiments with giving up showers entirely, and discovers that he is not alone. Along the way, he realizes that most of our standards of cleanliness are less related to health than

most people think. A major part of the picture has been missing: a little-known ecosystem known as the skin microbiome—the trillions of microbes that live on our skin and in our pores. These microbes are not dangerous; they're more like an outer layer of skin that no one knew we had, and they influence everything from acne, eczema, and dry skin, to how we smell. The new goal of skin care will be to cultivate a healthy biome—and to embrace the meaning of “clean” in

the natural sense. This can mean doing much less, saving time, money, energy, water, and plastic bottles in the process. Lucid, accessible, and deeply researched, Clean explores the ongoing, radical change in the way we think about our skin, introducing readers to the emerging science that will be at the forefront of health and wellness conversations in coming years.

OF THE WHITE WORKING-CLASS REVOLUTION

The first history of the western polymath, from the fifteenth century to the present day From Leonardo Da Vinci to John Dee and Comenius, from George Eliot to Oliver Sacks and Susan Sontag, polymaths have moved the frontiers of knowledge in countless ways. But history can be unkind to scholars with such encyclopaedic interests. All too often these

individuals are remembered for just one part of their valuable achievements. In this engaging, erudite account, renowned cultural historian Peter Burke argues for a more rounded view. Identifying 500 western polymaths, Burke explores their wide-ranging successes and shows how their rise matched a rapid growth of knowledge in the age of the invention of printing, the discovery of the New World and the Scientific Revolution. It is only more recently that the further

acceleration of knowledge has led to increased specialisation and to an environment that is less supportive of wide-ranging scholars and scientists. Spanning the Renaissance to the present day, Burke changes our understanding of this remarkable intellectual species.

"Open Water is tender poetry, a love song to

Black art and thought, an exploration of intimacy and vulnerability between two young artists learning to be soft with each other in a world that hardens against Black people.”—Yaa Gyasi, author of *Homegoing* In a crowded London pub, two young people meet. Both are Black British, both won scholarships to private schools where they struggled to belong, both are now artists—he a photographer, she a dancer—and both are trying to make their mark in a world that by turns

celebrates and rejects them. Tentatively, tenderly, they fall in love. But two people who seem destined to be together can still be torn apart by fear and violence, and over the course of a year they find their relationship tested by forces beyond their control. Narrated with deep intimacy, *Open Water* is at once an achingly beautiful love story and a potent insight into race and masculinity that asks what it means to be a person in a world that sees you only as a Black body; to be

vulnerable when you are only respected for strength; to find safety in love, only to lose it. With gorgeous, soulful intensity, and blistering emotional intelligence, Caleb Azumah Nelson gives a profoundly sensitive portrait of romantic love in all its feverish waves and comforting beauty. This is one of the most essential debut novels of recent years, heralding the arrival of a stellar and prodigious young talent.

One of the most widely read texts on the subject, *Boatbuilding Manual* has been used for years as a

standard reference at both boatbuilding and design schools. This fourth edition emphasizes traditional wooden construction but also surveys plywood, wood-epoxy, fiberglass, steel, aluminum, and other boatbuilding methods. The chapters on interpreting plans, lofting, and moldmaking are common to all methods. New to this edition are several chapters arising from the Miscellaneous Details chapter of earlier editions; an appendix on

sharpening tools; expanded tables of metric equivalents; an expanded and annotated source guide for plans, fasteners, hardware, wood, and other staples of boatbuilding; and a list of additional reading. Thoroughly updated with respect to modern tools and materials, *Boatbuilding Manual* remains both a professional reference and the first book a budding amateur should buy.
