Book Reviews McGraw-Hill/Glencoe

The long-awaited new edition of NAEYC's book *Developmentally Appropriate Practice in Early Childhood Programs* is here, fully revised and updated! Since the first edition in 1987, it has been an essential resource for the early childhood education field. Early childhood educators have a professional responsibility to plan and implement intentional, developmentally appropriate learning experiences that promote the social and emotional development, physical development and health, cognitive development, and general learning competencies of each child served. But what is developmentally appropriate practice (DAP)? DAP is a framework designed to promote young children's

optimal learning and development through a strengths-based approach to joyful, engaged learning. As educators make decisions to support each child's learning and development, they consider what they know about (1) commonality in children's development and learning, (2) each child as an individual (within the context of their family and community), and (3) everything discernible about the social and cultural contexts for each child, each educator, and the program as a whole. This latest edition of the book is fully revised to underscore the critical role social and cultural contexts play in child development and learning, including new research about implicit bias and teachers' own context and consideration of advances in neuroscience. Educators implement developmentally appropriate practice by recognizing the many assets all young children bring to the early learning program as individuals and as members of families and communities. They also develop an awareness of their own context. Building on each child's strengths, educators design and implement learning settings to help each child achieve their full potential across all domains of development and across all content areas.

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning,

shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Child Development for Early Years Students and Practitioners
McGraw-Hill/Glencoe

The health, development, and learning of many young children living in disadvantage areas are at serious risk. Access to education has improved under the United Nations Millennium Development Goals, and there are now programs in low- and middle-income countries that are aimed at improving instruction and learning. The research and evaluation on the effectiveness of such programs show there are significant challenges, but also some successes. This issue features presentations of leading international scientists, representatives from key governmental and non-governmental organizations, and others working with programs in the developing world and disadvantaged populations. The presentations describe the goals, existing challenges, and potential approaches to providing evidence-based programs to young children in rural, remote, and poverty stricken areas. Topics covered include: the state of early childhood in low and middle income nations, programs that have shown some success, and innovative research approaches that have been often considered unfeasible in these contexts. This is the 158th volume in this Jossey-Bass series *New Directions for Child and Adolescent Development*. Its mission is to provide scientific and scholarly presentations on cutting edge issues and concepts in this subject area. Each volume focuses on a specific new direction or research topic and is edited by experts from that field.

Ditch the behavioral charts and start teaching for universal success Disinterested students and behavioral problems are all too common in schools. Yet results show that behavior charts and other reward-and-punishment systems simply don't work. Teachers are burning out and students are failing. But what can be done? The secret lies in a unique combination of behavioral science, neuropsychology, and group dynamics. When teachers get the classroom experience right, students want to succeed and achieve to their potential, while behavioral problems largely vanish. For decades, it has been widely accepted that children have motivating needs including the need to avoid pain, a need for autonomy, and the need to belong. The authors harness these motivations into a method of interactions that increases cooperation, and in which children want to succeed and help others to thrive. Packed with real classroom examples and practical guidance for using the methods, this guide gives teachers the tools to transform even difficult classrooms. Start teaching for universal success in classroom management and academic accomplishments.

Research in Education Wiley

The Development of Children and Adolescents, by Penny Hauser-Cram, J. Kevin Nugent, Kathleen Thies, and John F. Travers, provides an integrated view of child development. Presenting the most pertinent research for each developmental stage and linking this to practical applications in the areas of Parenting, Policy, and Practice, this balanced approach emphasizes the relationship between research and theory and applications. The rich media program, including WileyPLUS with Real Development promotes active learning and allows for increased understanding and comprehension of the course content. Real Development, authored by Nicole Barnes, Ph.D., Montclair State University and Christine Hatchard, Psy.D., Monmouth University, uses authentic video showcasing real families, along with activities and assessments that put students in the place of a professional, to gain an understanding of key concepts. Through the combination of text and media, students are engaged in meaningful learning that deepens and enriches their understanding of developmental concepts. WileyPLUS sold separately from text.

Student Workbook Cambridge University Press
 OBSERVING CHILDREN AND ADOLESCENTS is an approximately 200 minute program of video segments that feature the

highlights of infant, child and adolescent development. Designed to deepen student's understanding of major developmental milestones, the program focuses on concrete and observable behavior and features segments of children interacting with peers, parents, and teachers in a variety of settings. The video focuses on how major developmental theories are exhibited in everyday behavior. Instructors can use the program as a classroom lecture tool or observational component. Because it is also available for student purchase, the program can also be utilized for out of class assignments. The observational video program is available for instructors on VHS with Instructor's Manual, free upon adoption of any Wadsworth Child Development textbook. It is also available for student purchase on a CD-ROM that comes automatically packaged with a student workbook. The student workbook features concept overviews, key terms and definitions, and a variety of critical thinking applications, many that ask the student to approach the same video segment from more than one theoretical perspective.
