An application of differential forms for the study of some local and global aspects of the differential geometry of surfaces. Differential forms are introduced in a simple way that will make them attractive to "users" of mathematics. A brief and elementary introduction to differentiable manifolds is given so that the main theorem, namely Stokes' theorem, can be presented in its natural setting.

The applications consist in developing the method of moving frames expounded by E. Cartan to study the local differential geometry of immersed surfaces in  $R^3$  as well as the intrinsic geometry of surfaces. This is then collated in the last chapter to present Chern's proof of the Gauss-Bonnet theorem for compact surfaces.

Digital Enterprise Technology Perspectives and Future Challenges

The huge potential in future connected services has as a precondition that privacy and security needs are dealt with in order for new services to be accepted. This issue is increasingly on the agenda both at company and at individual level. Cybersecurity and Privacy - bridging the gap addresses two very complex fields of the digital world, i.e., Cybersecurity and Privacy. These multifaceted, multidisciplinary and complex issues are usually understood and valued differently by different individuals, data holders and legal bodies. But a change in one field immediately affects the others. Policies, frameworks, strategies, laws, tools, techniques, and technologies - all of these are tightly interwoven when it comes to security and privacy. This book is another attempt to bridge the gap between the industry and academia. The book addresses the views from academia and industry on the subject. Technical topics discussed in the book include: Cybersecurity Encryption Privacy policy Trust Security and Internet of Things Botnets Data risks Cloudbased Services Visualization

From the Preface: "My name is Flora Jessop. I've been called apostate, vigilante, and crazy bitch, and maybe I am. But some people call me a hero, and I'd like to think they're right too. If I am a hero, maybe it's because every time I can play a part in saving a child or a woman from a life of servitude and degradation, I'm saving a little piece of me, too. I was one of twenty-eight children born to my dad and his three wives. Indoctrinated to believe that the outside world was evil, and that I resided among the righteous, I was destined to marry a man chosen for me by the Prophet. I would then live in harmony with my sister-wives, bear many children, and obey and serve my future husband in this life and throughout eternity. But my innocence didn't last long. While still a child, I understood that the church of the righteous was nothing but a church of lies. When I was eight years old my father sexually molested me for the first time, raping me when I was twelve. I tried to kill myself. Beaten, molested, taunted, and abused by family members alleging they only wanted to save my soul became a daily routine, I ran from this abuse more than once in my early teens--even attempting to cross the desert on foot. My family hunted me down. I thought government agencies would provide me safety if I reported my father. Instead, police and social services colluded with the FLDS to return me to my family and I ended up back inside polygamy, right where I started." Flora goes on from there to tell the dramatic true story of how she ultimately escaped and has been fighting against frustrating obstacles with hard fought successes in rescuing women and children from the FLDS. It's a story you can't put down.

"Although technological innovation is undoubtedly crucial for addressing climate change, low-carbon innovation policies and politics have hardly been studied. This book clearly reveals the promises and pitfalls of European efforts in this field - recommended reading!"—Sebastian Oberthür, Institute for European Studies, Belgium "This compact volume effectively addresses a surprisingly unknown territory in an otherwise well-explored landscape. In doing so, it will provide a useful resource to all who follow the uneven progress of climate and energy policy in the EU context, as well as those who are interested in policies to stimulate technology development more broadly." —Tim Rayner, Tyndall Centre for Climate Change Research, University of East Anglia, UK The EU Strategic Energy Technology Plan (SET-Plan) was aimed at accelerating low-carbon innovation by raising, coordinating and concentrating resources to certain low-carbon technologies. At the ten-year anniversary of the SET-Plan, this book examines why it was adopted and what it has achieved. Using an analytical framework developed to capture the 'politics of innovation', the authors trace the history of the Plan from initiation to implementation, and then explain its development as seen from the perspectives of the EU institutions, member-states, industry, the research community and international technology markets. The concluding chapter discusses lessons and prospects for European low-carbon innovation towards 2030 and beyond. This new work fills a void in the literature on EU climate and energy policies, and will appeal to scholars, students and practitioners in these fields.

decade brought a consolidation of the family of IR models, which by 2000 consisted of relatively isolated views on TF-IDF (Term-Frequency times Inverse-Document-Frequency) as the weighting scheme in the vector-space model (VSM), the probabilistic relevance framework (PRF), the binary independence retrieval (BIR) model, BM25 (Best-Match Version 25, the main instantiation of the PRF/BIR), and language modelling (LM). Also, the early 2000s saw the arrival of divergence from randomness (DFR). Regarding intuition and simplicity, though LM is clear from a probabilistic point of view, several people stated: "It is easy to understand TF-IDF and BM25. For LM, however, we understand the math, but we do not fully understand why it works." This book takes a horizontal approach gathering the foundations of TF-IDF, PRF, BIR, Poisson, BM25, LM, probabilistic inference networks (PIN's), and divergence-based models. The aim is to create a consolidated and balanced view on the main models. A particular focus of this book is on the "relationships between models." This includes an overview over the main frameworks (PRF, logical IR, VSM, generalized VSM) and a pairing of TF-IDF with other models. It becomes evident that TF-IDF and LM measure the same, namely the dependence (overlap) between document and query. The Poisson probability helps to establish probabilistic, non-heuristic roots for TF-IDF, and the Poisson parameter, average term frequency, is a binding link between several retrieval models and model parameters.
