International Trade Theory and Policy Penguin
Among the theoretical issues covered in this volume are the "economic" and the "axiomatic" or "test" approaches to the

problem of constructing and choosing among alternative cost-of-living index formulas; "bounds" and "econometric" alternatives for developing empirically computable approximations of theoretically desirable indexes; recommendations concerning the incorporation of leisure time in measures of the cost-of-living; and the formulation of social and group cost-of-living indexes. The Jorgenson-Slesnick paper also presents a far-reaching empirical

study of price changes in the U.S. The importance of this book to those with an interest in economic theory is obvious. However, this book also holds out the opportunity and challenge to applied researchers to gain a deeper understanding of the index numbers of which they make daily use.

International Economics John Wiley & Sons

The existence of firms with different levels of efficiency within a country plays an important role in this in-depth analysis of industrial and trade policies in a multi-country trade-theoretic framework. Sajal Lahiri and Yoshiyasu Ono examine various industrial policies, R&D subsidies and trade policies under conditions of imperfect competition in a product market created by the presence of Cournot oligopolistic interdependence in production. Trade is defined broadly to include trade in commodity as well as trade in capital, specifically foreign direct investment. While the first part of the book focuses on commodity trade and assumes full employment, the latter considers foreign direct investment and assumes the presence of unemployment. Given the importance of industrial policies and the prevalence of imperfect competition, together with ongoing attention to theoretical issues concerning industrial economics, this research will excite interest amongst researchers, advanced students and policy makers in this field.

This book analyzes the economics of the food industry at every stage between the farm gate and the kitchen counter. Central to the text are agricultural marketing problems such as the allocation of production between competing products (such as fresh and frozen markets), spatial competition, interregional trade, optimal storage, and price discrimination. Topics covered will be useful to students who expect to have careers such as food processing management, food sector buying or selling, restaurant management, supermarket management, marketing/advertising, risk management, and product development. The focus is on real world-relevant skills and examples and on intuition and economic understanding above mathematical sophistication, although the text does draw on the nuances of modern economic theory.

Verico discusses the ASEAN economic integration from dual perspectives of time span (trade, investment and finance) and framework (bilateral, sub-regional, regional and regional plus). The work is a comprehensive study of the integration in the wake of the ASEAN Economic Community (AEC)'s inauguration in late 2015. Examining various economic agreement levels from the ASEAN Free Trade Area (AFTA), Bilateral Free Trade Agreement (BFTA) and the AEC to financial integration in ASEAN, Verico attempts to envisage the future of ASEAN in completing its regional economic integration from trade to investment and finance. Verico argues that, in the absence of a customs union, ASEAN must utilize the open-regionalism frameworks of the ASEAN Plus One, ASEAN Plus Three, Regional Comprehensive Economic Partnership and others in order to shift its economic

integration level in this way.
