As the definitive

diagnostic atlas of the diseases of the

hematopoietic system, the Atlas of

Hematopathology appeals

to a wide range of people who are being trained in a

variety of medical fields

or practicing as non-

hematopathologists, and

therefore, are looking for a book which can provide

information in a clear, focused format, with no excessive text or details.

The atlas offers effective guidance in evaluating

specimens from the

lymph nodes, bone

marrow, spleen, and

peripheral blood, enabling

clinicians to deliver more accurate and actionable pathology reports.

Practicing physicians and

those in pathology and

hematology training also

gain a better

understanding of the

nature of hematologic

disorders and improve

their diagnostic skills

along the way. Taking a unique multi-disciplinary approach, the book covers

conventional

histopathology and

cytopathology, as well as

all important complementary diagnostic

tests, such as

immunophenotyping

(immunohistochemical stains and flow

cytometry), karyotyping,

FISH and DNA/molecular

studies. It offers concise

textual and extensive

visual coverage of both

neoplastic and non-

neoplastic hematology

disorders, with the

neoplastic hematology sections presented according to the most recent WHO classifications. There is also an introduction to the normal structures of hematopoietic tissues and the various multidisciplinary techniques. The atlas contains more than 900 high-quality color images that mirror the findings that fellows and clinicians encounter in practice. It provides information in a quick, simple and user-friendly manner, attracting those who are

in training or are not considered experts in the field. Residents, fellows, practicing clinicians, and researchers in pathology, hematology, hematology/oncology, as well as graduate students in pathology and other clinicians working in clinical hematology laboratories will all find it useful. Saves clinicians and researchers time in quickly accessing the very latest details on the diverse clinical and scientific aspects of hematopathology, as opposed to searching

through thousands of journal articles For clinicians, fellows, and residents, correct diagnosis (and therefore correct treatment) of diseases depends on a strong understanding of the molecular basis for the disease – hematologists, pathologists, oncologists, and other clinicians will benefit from this clear, focused, annotated format Companion web site features over 900 images from the book!

*Anthony's Textbook of Anatomy & Physiology - E-Book* Academic Press  
*Algorithms in Pediatrics* uses an algorithm-based approach to various paediatric disorders. Every section presents algorithms based on patient history, physical examination, and laboratory studies, using a step-by-step approach. Clinical evaluation, diagnosis, treatment and management are also included, with clinical pearls throughout and key points at the end of each section, making this an

ideal resource for post-graduates and paediatricians.  
*Hoffman and Abeloff's Hematology-Oncology Review E-Book* Elsevier Health Sciences  
*Diagnostic Cytology and Hematology of the Horse* is a practical reference that presents common clinical findings in an easy-to-use text/atlas format. A general chapter discusses sample collections and techniques, followed by a 'systems' approach and chapters on specific types of fluid. Within systems

chapters, normal findings are established and then abnormal findings are presented by class of problems, such as bacterial lesions, fungal lesions, parasitic lesions, etc. in the case of the eye. Algorithms on sample evaluations enhance text discussions by guiding readers to the most likely cytologic diagnosis. In addition, a color plate section features 64 illustrations for convenient comparison of cell types and infectious agents. A detailed index makes this

edition even more useful as a quick clinical reference, ideal for helping readers understand correct collection and handling procedures, avoid costly errors, and make accurate diagnoses.
