This collective volume explores clause-linkage strategies in a cross-linguistic perspective with greater emphasis on subordination. Part I presents some theoretical reassessment of syntactic terminologies and distinctive criteria for subordination, as well as typological methods based on sets of variables and statistics allowing cross-linguistic comparability. Part II deals with strategies relating

to clause-chaining, conjunctive conjugations, converbial constructions, masdars. Part III centers on the interaction between the syntax, pragmatics, and semantics of clause-linking and subordination, in relation to informa-tional structure, to referential hierarchy, and correlative constructions. Part IV presents insights in the clause-linking and subordinating functions of some T.A.M. markers, verbal inflectional morphology and conjugation systems, which may also interact with informa-tional hierarchy, via the backgrounding effects and lack of illocutionary force of some aspect and mood forms. The volume is of particular interest to linguists and typologists working on clause-linkage systems and on the interface between syntax, pragmatics, and semantics.

THE COMPLETE IDIOT'S GUIDE TO CONVERSATIONAL JAPANESE

John Benjamins Publishing

This book brings together papers which address a range of issues regarding the nature and structure of sign languages and other gestural systems, and how they exploit the space in which they are conveyed. The chapters focus on five pertinent areas reflecting different, but related research topics: * space in language and gesture, * point of view and referential shift, * morphosyntax of verbs in ASL, * gestural systems and sign language, and * language acquisition and gesture. Sign languages and gestural systems are produced in physical space; they manipulate spatial contrasts for linguistic and communicative purposes. In addition to exploring the different functions of space, researchers discuss similarities and differences between visual-gestural systems -- established sign languages, pidgin sign language (International Sign), "homesign" systems developed by deaf children with no sign language input, novel gesture systems invented by hearing nonsigners, and the gesticulation that accompanies speech. The development of gesture and sign language in children is also examined in both hearing and deaf children, charting the emergence of gesture ("manual babbling"), its use as a prelinguistic communicative device, and its transformation into language-like systems in homesigners. Finally, theoretical linguistic accounts of the structure of sign languages are provided in chapters dealing with the analysis of referential shift, the structure of narrative, the analysis of tense and the structure of the verb phrase in American Sign Language. Taken together, the chapters in this volume present a comprehensive picture of sign language and gesture research from a group of international scholars who investigate a range of communicative systems from formal sign languages to the gesticulation that accompanies speech.

United by a common focus on writing by and about women, this collection of contemporary essays, spanning the novel, poetry, drama, film and criticism, emphasises some of the problems of theory and practice posed by writing as a woman and by women's representation in literature. The subjects of individual essays range from the nineteenth and twentieth century novel to avant-garde film, and from Victorian women poets to Russian women poets of today. Drawing on structuralism, psychoanalysis, semiotics, socio-linguistics and Marxist analyses of literature, the diverse essays suggest the variety and vigour of contemporary feminist literary criticism, as well as representing the debates animating it. Successfully bridging the gap between literary criticism and literary production, the scope of this collection will be of considerable interest to those concerned with developments in literary criticism as well as to those in the field of women's studies.

This collection of papers on the Brythonic languages of the Celtic group is divided into four parts: Welsh linguistics, Breton and Cornish linguistics, literary linguistics, and historical linguistics. This has resulted in a book providing a thorough and comprehensive coverage of this branch of Celtic studies prepared by leading scholars in the field.

The African slave trade, beginning in the fifteenth century, brought African languages into contact with Spanish and Portuguese, resulting in the Africans' gradual acquisition of these languages. In this 2004 book, John Lipski describes the major forms of Afro-Hispanic language found in the Iberian Peninsula and Latin America over the last 500 years. As well as discussing pronunciation, morphology and syntax, he separates legitimate forms of Afro-Hispanic expression from those that result from racist stereotyping, to assess how contact with the African diaspora has had a permanent impact on contemporary Spanish. A principal issue is the possibility that Spanish, in contact with speakers of African languages, may have creolized and restructured - in the Caribbean and perhaps elsewhere - permanently affecting regional and social varieties of Spanish today. The book is accompanied by the largest known anthology of primary Afro-Hispanic texts from Iberia, Latin America, and former Afro-Hispanic contacts in Africa and Asia.

This introduction to the linguistic study of pidgin and creole languages is clearly designed as an introductory course book. It does not demand a high level of previous linguistic knowledge. Part I: General Aspects and Part II: Theories of Genesis constitute the core for presentation and discussion in the classroom, while Part III: Sketches of Individual Languages (such as Eskimo Pidgin, Haitian, Saramaccan, Shaba Swahili, Fa d'Ambu, Papiamentu, Sranan, Berbice Dutch) and Part IV: Grammatical Features (such as TMA particles and auxiliaries, noun phrases, reflexives, serial verbs, fronting) can form the basis for further exploration. A concluding chapter draws together the different strands of argumentation, and the annotated list provides the background information on several hundred pidgins, creoles and mixed languages. Diversity rather than unity is taken to be the central theme, and for the first time in an introduction to pidgins and creoles, the Atlantic creoles receive the attention they deserve. Pidgins are not treated as necessarily an intermediate step on the way to creoles, but as linguistic entities in their own right with their own characteristics. In addition to pidgins, mixed languages are treated in a separate chapter. Research on pidgin and creole languages during the past decade has yielded an abundance of uncovered material and new insights. This introduction, written jointly by the creolists of the University of Amsterdam, could not have been written without recourse to this new material.

Is there such a thing as a female literary imagination - a special brand of insight and intuition that characterises women's writing? Is there something about a novel, whether by Jane Austen, Charlotte Brontë or Doris Lessing, that tells us that it could only have been written by a woman? Do the subject matter, form and style that women choose throw light on the way they think and feel? In this brilliant and highly readable book, originally published in 1976, Patricia Spacks analyses the female view of the world. Juxtaposing - sometimes in startlingly original combination some eighty books written between the seventeenth century and the present day she uses both literary and psychological analysis to explore patterns that recur again and again in the stories women tell -

whether about their own lives or the lives of their fictional characters. She dissects female experience in the twentieth century as viewed by an array of writers ranging from Kate Millet to Virginia Woolf; examines the interplay of social passivity and psychic power that dominates characters such as Maggie Tulliver and Jane Eyre, the altruism that impels Jane Austen's and Mrs Gaskell's heroines, the 'acceptance' of Virginia Woolf's Mrs Ramsey, the personal and social conflicts that beset so many of the adolescent girls that figure in both nineteenth-century and contemporary literature; reveals the complex motives that can be bound up in a women's deliberate choice of the artist's role, as appears in the writings of Isadora Duncan's and Dora Carrington, Marie Bashkirtseff and Mary McCartney - and the surprising forms 'freedom' can take, as for Beatrice Webb in the East End of London or Isak Dinerson in the wilds of Africa... The voices echo and re-echo across the years in fascinating counter-point. Their range is enormous - rebels and reformers, actresses and painters, Society ladies and unknown girls in small towns, novels, poems, memoirs, diaries and letters, both English and American, and alongside classics such as *Wuthering Heights* and well-known modern works such as *The Bell Jar*, Patricia Spacks introduces an intriguing selection of relatively unknown writers, such as Napoleon's psychoanalyst great-niece Marie Bonaparte, the Victorian arch-fantast Mary MacLane and the autobiography of a seventeenth-century Duchess. *The Female Imagination* is much more than a study of women's writing. It is an inquiry into the nature of female thought, self-expression and experience. As such it should appeal to every educated woman - and to many men too.

Research on language universals and research on linguistic typology are not antagonistic, but rather complementary approaches to the same fundamental problem: the relationship between the amazing diversity of languages and the profound unity of language. Only if the true extent of typological divergence is recognized can universal laws be formulated. In recent years it has become more and more evident that a broad range of languages of radically different types must be carefully analyzed before general theories are possible. Typological comparison of this kind is now at the centre of linguistic research. The series empirical approaches to language typology presents a platform for contributions of all kinds to this rapidly developing field. The distinctive feature of the series is its markedly empirical orientation. All conclusions to be reached are the result of a deepened study of empirical data. General problems are focused on from the perspective of individual languages, language families, language groups, or language samples. Special emphasis is given to the analysis of phenomena from little known languages, which shed new light on long-standing problems in general linguistics. The series is open to contributions from different theoretical persuasions. It thus reflects the methodological pluralism that characterizes the present situation. Care is taken that all volumes be accessible to every linguist and, moreover, to every reader specializing in some domain related to human language. A deeper understanding of human language in general, based on a detailed analysis of typological diversity among individual

languages, is fundamental for many sciences, not only for linguists. Therefore, this series has proven to be indispensable in every research library, be it public or private, which has a specialization in language and the language sciences. Pragmatics of Language and Literature Praeger

This pioneer study goes well beyond the subject of linguistics to encompass economic, sociological, political, and educational approaches to language change. In the context of the development of national resources, the book focuses on language planning--the deliberate change and promotion of language structure and language use. It outlines a theoretical approach to the study of language planning and includes selected case studies which demonstrate the possibilities of broadening and improving national planning by taking linguistic and human resources into explicit account to enhance forecasting. The contributors to this volume include highly renowned experts in their respective academic fields as well as actual language planners. They were brought together on the instigation of a study group on language-planning processes sponsored by the East-West Center, University of Hawaii, with Ford Foundation support. *Can Language Be Planned?* is one result of their joint studies. An on-going cross-national research project on language-planning processes at Stanford University is another.

This collection of essays sheds new light on the verb in English. The authors illustrate that verbs can only be properly understood if studied from both a theoretical and descriptive perspective. In Part One, the authors explore topics such as the terminological problems of classification, verb complementation, the semantics and pragmatics of verbs and verbal combinations, and the notions of tense, aspect, voice and modality. In Part Two, computer corpora are used to study various types of verb complements and collocations, to trace the development in English of certain verb forms, and to detail the usage of verbs in different varieties and genres of English.

The first part of the book presents a linguistic analysis of Latin American Spanish and places it in a broad historical context. The author examines the phonology and morphology of the language, its syntactic and lexical variation and social differentiation, its past and present contacts with other languages and also explores the sociohistorical factors which have shaped the various Latin American Spanish dialects. He provides the reader with a detailed account of the influence of African and Native American languages and populations, and assesses the contribution made by Peninsular Spanish. This includes the geographical and social origins of the original Spanish settlers, the effects of dialect levelling and nautical language and subsequent migratory patterns. There are also in-depth evaluations of dialect classification schemes.

Unlike other vocabulary guides that require the rote memorization of literally thousands of words, this book starts from the premise that using the etymological connections between Spanish and English words—their common derivations from Latin, Greek, and other languages—is the most effective way to acquire and remember vocabulary. This approach is suitable for beginners as well as for advanced students. Teachers of the language will also find much material that can be used to help motivate their students to acquire, and retain, Spanish vocabulary. Spanish Vocabulary is divided into four parts and four annexes: Part I provides background material on the origins of Spanish and begins the process of presenting Spanish vocabulary. Part II presents "classical" Spanish vocabulary—words whose form (in both Spanish and English) is nearly unchanged from Latin and Greek. Part III deals with "popular" Spanish vocabulary, which underwent significant changes in form (and often meaning) during the evolution from Latin to Spanish. A number of linguistic patterns are identified that will help learners recognize and remember new vocabulary. Part IV treats a wide range of themes, including words of Germanic and Arabic origin, numbers, time, food and animals, the family, the body, and politics. Annex A: Principal exceptions to the "Simplified Gender Rule" Annex B: 700 words whose relations, if any, to English words are not immediately obvious Annex C: -cer verbs and related words Annex D: 4,500 additional words, either individually or in groups, with English correspondences

In sentences containing reported speech, thought, or perception, it is possible to distinguish different voices or views, associated with different discourse roles. They originate in two different clauses: one clause signals a reporting situation, and the other a reported situation. This volume examines the methods used for combining these two types of clauses in a range of languages. In each of the contributions, the focus is on the forms and functions of verbs; topics dealt with include the meaning of tense, mood, and aspect (and their interaction) in the various types of reported speech, the speech act status of reported utterances, correlations between reporting verbs and verbs in reported clauses (and the conjunctions introducing them), and possible intra-systemic and cross-linguistic correlations of these properties. The articles concentrate on the Slavic languages Russian, Bulgarian, Macedonian, Serbian, Croatian, and Slovene, the Romance languages Latin, Old and Modern French, and Spanish, the Germanic languages Swedish, German, Dutch, and English, the Indo-Iranian language Bengali, and Mandarin Chinese.

Latin American Spanish Walter de Gruyter

The volume presents an overview of recent cognitive linguistic research on Slavic languages, with their rich inflectional morphology in both the nominal and the verbal system, provide an important testing ground for a linguistic theory that seeks to motivate linguistic structure. Therefore, the volume touches upon a wide range of phenomena: it addresses issues related to the semantics of grammatical case, tense, aspect, voice and word order, it looks into grammaticalization and language change and discusses sound symbolism. At the same time, the analyses presented address a variety of theoretically important issues. Take for example the role of virtual entities in language or that of iconic motivation in grammar, the importance of metaphor for grammaticalization or that of subjectification for motivating synchronic polysemy and diachronic language change, as well as the myriad of patterns available to encode events in a non-canonical way or to convey the speaker's epistemic stance with respect to the communicated content. In addition, the analyses are couched in a variety of cognitive linguistic frameworks, such as cognitive grammar, mental space theory, construction grammar, frame semantics, grammaticalization theory, as well as prototype semantics. All in all, the analyses presented in this volume enrich the understanding of established aspects of the cognitive model of language and may serve as catalysts for their further development and refinement, making the volume a worthwhile read for Slavic and cognitive linguists alike.
