REEVES JONAH

Corruption Prevention and Governance in Hong Kong

Taylor & Francis

A sobering account of a disenfranchised American working class and important policy solutions to the nation's economic inequalities One of the country's leading scholars on economics and social policy, Isabel Sawhill addresses the enormous divisions in American society—economic, cultural, and political—and what might be done to bridge them. Widening inequality and the loss of jobs to trade and technology has left a significant portion of the American workforce disenfranchised and skeptical of governments and corporations alike. And yet both have a role to play in improving the country for all. Sawhill argues for a policy agenda based on mainstream values, such as family, education, and work. While many have lost faith in government programs designed to help them, there are still trusted institutions on both the local and federal level that can deliver better job opportunities and higher wages to those who have been left behind. At the same time, the private sector needs to reexamine how it trains and rewards employees. This book provides a clear-headed and middle-way path to a better-functioning society in which personal responsibility is honored and inclusive capitalism and more broadly shared growth are once more the norm.

Artificial intelligence and the future of warfare

Springer
A collection of case studies of terrorist rehabilitation programmes from around the world, this book examines the wide-ranging methodologies of terrorist deradicalisation initiatives adopted by different countries globally. It contextualises these programmes as they were initiated and explains the factors that led to their relative success, failure or continuity. The different typology of rehabilitation modes acts as a guide to establishing a framework and a starting point for any deradicalisation and rehabilitation programme. These case studies demonstrate practical examples of how the theories can be applied to achieve real results. This book is an indispensable resource for researchers, practitioners and policy-makers in the field of Terrorist Deradicalisation and Rehabilitation.

Brexit and Internal Security

Emerald Group Publishing
Child soldiers remain poorly understood and inadequately protected, despite significant media attention and many policy initiatives. This Research Handbook aims to redress this troubling gap. It offers a reflective, fresh and nuanced review of the complex issue of child soldiering. The Handbook brings together scholars from six continents, diverse experiences, and a broad range of disciplines. Along the way, it unpacks the life-cycle of youth and militarization: from recruitment to demobilization to return to civilian life. The overarching aim of the Handbook is to render the invisible visible - the contributions map the unmapped and chart new directions. Challenging prevailing assumptions and

conceptions, the Research Handbook on Child Soldiers focuses on adversity but also capacity: emphasising the resilience, humanity, and potentiality of children affected (rather than 'afflicted') by armed conflict.

National Cyber Emergencies

Edward Elgar Publishing
This volume offers an innovative and counter-intuitive study of how and why artificial intelligence-infused weapon systems will affect the strategic stability between nuclear-armed states. Johnson demystifies the hype surrounding artificial intelligence (AI) in the context of nuclear weapons and, more broadly, future warfare. The book highlights the potential, multifaceted intersections of this and other disruptive technology - robotics and autonomy, cyber, drone swarming, big data analytics, and quantum communications - with nuclear stability. Anticipating and preparing for the consequences of the AI-empowered weapon systems are fast becoming a critical task for national security and statecraft. Johnson considers the impact of these trends on deterrence, military escalation, and strategic stability between nuclear-armed states - especially China and the United States. The book draws on a wealth of political and cognitive science, strategic studies, and technical analysis to shed light on the coalescence of developments in AI and other disruptive emerging technologies. Artificial intelligence and the future of warfare sketches a clear picture of the potential impact of AI on the digitized battlefield and broadens our understanding of critical questions for international affairs. AI will profoundly change how wars are fought, and how decision-makers think about nuclear deterrence, escalation management, and strategic stability - but not for the reasons you might think.

Ethiopia's agrifood system: Past trends, present challenges, and future scenarios

United Nations
This book makes an original contribution to our knowledge of the world's major defence industries. Experts from a wide range of different countries - from the major economies of North America and Western Europe to developing economies and some unique cases such as China, India, Singapore, South Africa and North Korea - describe and analyse the structure, conduct and performance of the defence industry in that country. Each chapter opens with statistics on a key nation's defence spending, its spending on defence R&D and on procurement over the period 1980 to 2017, allowing for an analysis of industry changes following the end of the Cold War. After the facts of each industry, the authors describe and analyse the structure, conduct and performance of the industry. The analysis of 'structure' includes discussions of entry conditions, domestic monopoly/oligopoly structures and opportunities for competition. The section on 'conduct' analyses price/non-price competition, including private and state funded R&D, and 'performance' incorporates profitability, imports and exports together with spin-offs and technical progress. The conclusion explores the future prospects for each nation's defence industry. Do defence industries have a future? What might the future defence firm and industry look like

in 50 years' time? This volume is a vital resource and reference for anyone interested in defence economics, industrial economics, international relations, strategic studies and public procurement.

CAIRO'S ULTRAS

Yale University Press

When the United States entered World War I, President Woodrow Wilson declared to Congress that the objective was not merely to bring "a new balance of power," but rather to bring a "just and secure peace" to the world by the end of the conflict. In this famous speech, known as "The Fourteen Points," Wilson offered the world a road map toward a more equitable international system in the midst of unprecedented global conflict, including ideas on the interconnectedness of democracy, trade, and the concept of a forum for peaceably resolving international disputes. Even decades after the end of the First World War, Wilson's ideas remained important and influenced many of his successors. But now, in the twenty-first century, there are forces at work in the world that Wilson could never have imagined, and those forces call for a new plan toward peace. In *Fourteen Points for the Twenty-First Century: A Renewed Appeal for Cooperative Internationalism*, Richard H. Immerman and Jeffrey A. Engel bring together a diverse group of thinkers who take up Wilson's call for a new world order by exploring fourteen new directions for the twenty-first century. The contributors—scholars, policymakers, entrepreneurs, poets, doctors, and scientists—propose solutions to contemporary challenges such as migration, global warming, health care, food security, and privacy in the digital age. Taken together, these points challenge American leaders and policymakers to champion an international effort, not to make America great again, but to work cooperatively with other nations on the basis of mutual respect.

Organization and Financing of Public Health Services in Europe

Bloomsbury Publishing USA
This book challenges the traditional approach to international law by concentrating on international hThis book challenges the traditional approach to international law by concentrating on international humanitarian law and placing the focus beyond States: it reflects on current legal, policy and practical issues that concern non-State actors in and around situations of armed conflict. With the emergence of the nation-State, international law was almost entirely focused on inter-State relations, thus excluding - for the most part - non-State entities. In the modern era, such a focus needs to be adjusted, in order to encompass the various types of functions and interactions that those entities perform throughout numerous international decision-making processes. The contributions that comprise this volume are oriented towards a broad readership audience in the academic and professional fields related to international humanitarian law, international criminal law, international human rights law and general public international law. Ezequiel Heffes, LL.M., is a Thematic Legal Adviser in the Policy and Legal Unit at Geneva Call

in Geneva, Switzerland, Marcos D. Kotlik, LL.M., is Academic Coordinator at the Observatory of International Humanitarian Law of the University of Buenos Aires, School of Law and was a Judicial Fellow at the International Court of Justice between 2018-2019, and Manuel J. Ventura, LL.M. (Hons), is an Associate Legal Officer in the Office of the Prosecutor at the International Residual Mechanism for Criminal Tribunals, an Adjunct Fellow at the School of Law at Western Sydney University, and a Director of The Peace and Justice Initiative.

Virtual Freedoms, Terrorism and the Law Routledge

A fascinating account of football culture in Egypt through its ultras groups. The history of Cairo's football fans is one of the most poignant narratives of the 25 January 2011 Egyptian uprising. The Ultras Al-Ahly and the Ultras White Knights fans, belonging to the two main teams, Al-Ahly F.C. and Zamalek F.C. respectively, became embroiled in the street protests that brought down the Mubarak regime. In the violent turmoil since, the Ultras have been locked in a bitter conflict with the Egyptian security state. Tracing these social movements to explore their role in the uprising and the political dimension of soccer in Egypt, Ronnie Close provides a vivid, intimate sense of the Ultras' unique subculture. Cairo's Ultras: Resistance and Revolution in Egypt's Football Culture explores how football communities offer ways of belonging and instill meaning in everyday life. Close asks us to rethink the labels 'fans' or 'hooligans' and what such terms might really mean. He argues that the role of the body is essential to understanding the cultural practices of the Cairo Ultras, and that the physicality of the stadium rituals and acerbic chants were key expressions that resonated with many Egyptians. Along the way, the book skewers media clichés and retraces revolutionary politics and social networks to consider the capacity of sport to emancipate through performances on the football terraces.

The Law of Higher Education Routledge

Transportation Network Companies and Taxis: The Case of Seattle is a modern economic case history and thorough analysis of the devastating impact of the transportation network company (TNC) industry (Uber and Lyft) on the taxicab industry in Seattle, Washington, beginning in 2014. The events that transpired and lessons learned are applicable to most large cities in North America, Europe and Australia. As the regulator of the taxicab and TNC industries in Seattle during this period, the author offers a unique insider perspective. The book also provides internal operating statistics on the TNC industry, which are available here for the first time. Despite the spectacular growth of the TNC industry, growth rates have steadily declined and may fall to zero by 2019 or 2020, while the taxicab industry appears to have begun a modest recovery. This book offers a thorough explanation of how and why this decline has happened. It explains the taxicab industry, economic deregulation, competitive market failure, market disruption, price elasticity of demand and other concepts. There is also a wealth of data, computations and analysis for the specialized reader. This book considers the past, present and future of the taxicab and TNC industries in Seattle. It is recommended for both the general reader and industry professionals.

Report to the Congress : Manchester University Press

Your must-have resource on the law of higher education. Written by recognized experts in the field, the latest edition of *The Law of Higher Education* offers college administrators, legal counsel, and researchers with the most up-to-date, comprehensive coverage of the legal implications of administrative decision making. In the increasingly litigious environment of higher education, William A. Kaplin and Barbara A. Lee's clear, cogent, and contextualized legal guide proves more and more indispensable every year. Two new authors, Neal H. Hutchens and Jacob H. Rooksby, have joined the Kaplin and Lee team to provide additional coverage of important developments in higher education law. From hate speech to student suicide, from intellectual property developments to issues involving FERPA, this comprehensive resource helps ensure you're ready for anything that may come your way. Includes new material since publication of the previous edition. Covers Title IX developments and intellectual property. Explores new protections for gay and transgender students and employees. Delves into free speech rights of faculty and students in public universities. Expands the discussion of faculty academic freedom, student academic freedom, and institutional academic freedom. If this book isn't on your shelf, it needs to be.

Defense Against Biological Attacks University Press of Kentucky

This book documents and explains civil defence preparations for national cyber emergencies in conditions of both peace and war. The volume analyses the escalating sense of crisis around state-sponsored cyber attacks that has emerged since 2015, when the United States first declared a national emergency in cyberspace. It documents a shift in thinking in the USA, from cooperative resilience-oriented approaches at national level to more highly regulated, state-led civil defence initiatives. Although the American response has been mirrored in other countries, the shift is far from universal. Civil defence strategies have come into play but the global experience of that has not been consistent or even that successful. Containing contributions from well-placed scholars and practitioners, this volume reviews a selection of national experiences (from the USA, Australia, India, China,

Estonia, and Finland) and a number of key thematic issues (information weapons, alliance coordination, and attack simulations). These demonstrate a disconnect between the deepening sense of vulnerability and the availability of viable solutions at the national level. Awareness of this gap may ultimately lead to more internationally oriented cooperation, but the trend for now appears to be more conflictual and rooted in a growing sense of insecurity. This book will be of much interest to students of cyber security, homeland security, disaster management, and international relations, as well as practitioners and policy-makers.

REFUGEES AND MIGRANTS IN LAW AND POLICY

Springer Nature

While espionage between states is a practice dating back centuries, the emergence of the internet revolutionised the types and scale of intelligence activities, creating drastic new challenges for the traditional legal frameworks governing them. This book argues that cyber-espionage has come to have an uneasy status in law: it is not prohibited, because spying does not result in an internationally wrongful act, but neither is it authorised or permitted, because states are free to resist foreign cyber-espionage activities. Rather than seeking further regulation, however, governments have remained purposefully silent, leaving them free to pursue cyber-espionage themselves at the same time as they adopt measures to prevent falling victim to it. Drawing on detailed analysis of state practice and examples from sovereignty, diplomacy, human rights and economic law, this book offers a comprehensive overview of the current legal status of cyber-espionage, as well as future directions for research and policy. It is an essential resource for scholars and practitioners in international law, as well as anyone interested in the future of cyber-security.

Refugees and Asylum Seekers Intl Food Policy Res Inst Report to the Congress :.Government Printing OfficeArtificial intelligence and the future of warfareManchester University Press

Fourteen Points for the Twenty-First Century The Hague

Centre for Strategic Studies

This book is a comprehensive study of the development of China's nuclear-powered ballistic missile submarines (SSBNs). It offers insights into the secretive world of nuclear submarines and ballistic missiles of the Chinese (PLA) Navy and studies how these are likely to grow in the next two decades. The volume examines the technological origins of the design and development of Chinese nuclear submarines, ballistic missiles, and their naval construction capabilities. It provides an analysis of the underlying Chinese nuclear doctrine, China's maritime geographical constraints for submarine operations, and the credibility of its sea-based deterrence. It draws upon strategy, nuclear policy, technology, geography, and operational considerations to holistically predict the likely SSBN force levels of the PLA Navy for various scenarios. The book also assesses the spectrum of threats likely from the undersea domain for India and other nations in the Indo-Pacific region. A key text on an obscure but vital facet of Chinese defence studies, this book will be useful for scholars and researchers of strategic affairs, international relations and disarmament studies, peace and conflict studies, geopolitics, foreign policy, Indo-Pacific studies, and diplomacy.

Street Cop Routledge

Explore this indispensable guide covering the fundamentals of IOT and wearable devices from a leading voice in the field. Fundamentals of IoT and Wearable Technology Design delivers a comprehensive exploration of the foundations of the Internet of Things (IoT) and wearable technology. Throughout the textbook, the focus is on IoT and wearable technology and their applications, including mobile health, environment, home automation, and smart living. Readers will learn about the most recent developments in the design and prototyping of these devices. This interdisciplinary work combines technical concepts from electrical, mechanical, biomedical, computer, and industrial engineering, all of which are used in the design and manufacture of IoT and wearable devices. Fundamentals of IoT and Wearable Technology Design thoroughly investigates the foundational characteristics, architectural aspects, and practical considerations, while offering readers detailed and systematic design and prototyping processes of typical use cases representing IoT and wearable technology. Later chapters discuss crucial issues, including PCB design, cloud and edge topologies, privacy and health concerns, and regulatory policies. Readers will also benefit from the inclusion of: A thorough introduction to the applications of IoT and wearable technology, including biomedicine and healthcare, fitness and wellbeing, sports, home automation, and more. Discussions of wearable components and technologies, including microcontrollers and microprocessors, sensors, actuators and communication modules. An exploration of the characteristics and basics of the communication protocols and technologies used in IoT and wearable devices. An overview of the most important security challenges, threats, attacks and vulnerabilities faced by IoT and wearable devices along with potential solutions. Perfect for research and development scientists working in the wearable technology and Internet of Things spaces, Fundamentals of IoT and Wearable Technology

Design will also earn a place in the libraries of undergraduate and graduate students studying wearable technology and IoT, as well as professors and practicing technologists in the area.

The Economics of the Global Defence Industry Springer Nature
This book offers a comprehensive account of the status and dynamics of people participating in the small-scale fisheries (SSF) of Europe. It covers the situation of SSF in 25 coastal countries, thereby providing a portrait of almost every coastal country on the continent and analyzing the recent evolution of the sector. Small-scale fisheries are argued to be extremely important in Europe, as they provide employment and welfare, while increasing food sovereignty and maintaining communities in coastal areas. The recent worldwide focus on SSF derives from their environmental sustainability, which distinguishes many of their activities from those of large-scale fisheries. This book analyses the diversity of SSF and shows how fishing communities have sometimes developed successful governing models, demonstrating social and economic resilience. While the book emphasizes the strengths of SSF and the synergies that occur with other marine sectors, it also presents cases of failure, in which collective action and policy have actually contributed to a weakening of the sector. In this context, the book shows how governmental policies toward SSF vary considerably from country to country, in a way that is not entirely consistent with European policies.

Nuclear Non-Proliferation in International Law - Volume V World Health Organization

This book provides an ethnography of street-level policing in the United States and offers an analysis with valuable lessons for today's law enforcement officers. Author George C. Klein, sociologist and former police officer, explores the characteristics of policing in a suburb outside of large Midwestern city in the United States. As a participant-observation fieldworker, he functioned as an ethnographic researcher, recording with a sociological eye the "real world" tasks of policing, including the ordinary as well as the more remarkable aspects of day-to-day law enforcement. He approaches the data with three levels of analysis, looking at embedded issues in policing, such as discretion, danger, corruption, cynicism, race, and class; a mid-range analysis that examines police work as an example of street-level bureaucracy; and a global analysis assessing the entrenched roles of race, class, and demography in police work, as well as, society, in the U.S. This book focuses on the need for police officers to solve social problems that other institutions in society are unwilling, or unable, to solve. It examines a myriad of issues, such as police socialization, the use of force by police officers, stress levels and suicide risk factors, disparate styles of policing, police militarization, de-escalation, and more. With compelling detail, the author helps the reader understand the turmoil regarding policing in the United States today. It is ideal for police professionals as well as students and scholars of criminal justice, criminology, sociology, psychology, history, political science and journalism.

Tracing the Undersea Dragon Edward Elgar Publishing

This first volume of a two-volume set describes general aspects, such as the historical view on the topic, the role of information distribution and preparedness of health-care systems and preparedness in emergency cases. Part two describes and discusses in detail the pathogens and toxins that are potentially used for biological attacks. As such, the book is a valuable resource for faculties engaged in molecular biology, genetic engineering, neurology, biodefense, biosafety & biosecurity, virology, and infectious disease programs, as well as professional medical research organizations.

Cyber-espionage in international law Routledge

This book analyses central questions in the continuing debate about success factors in corruption prevention and the efficacy and value of anti-corruption agencies (ACAs). How do ACAs become valued within a polity? What challenges must they overcome? What conditions account for their success and failure? What contributions can corruption prevention make to good governance? And in what areas might they have little or no effect on the quality of governance? With these questions in mind, the authors examine the experience of Hong Kong's Independent Commission Against Corruption (ICAC), widely regarded as one of the few successful examples of an ACA. The book is grounded in an analysis of ICAC documents and surveys, the authors' survey of social attitudes towards corruption in Hong Kong, and interviews with former officials.

Playing to Your Strengths Report to the Congress :.

What are public health services? Countries across Europe understand what they are or what they should include differently. This study describes the experiences of nine countries detailing the ways they have opted to organize and finance public health services and train and employ their public health workforce. It covers England France Germany Italy the Netherlands Slovenia Sweden Poland and the Republic of Moldova and aims to give insights into current practice that will support decision-makers in their efforts to strengthen public health capacities and services. Each country chapter captures the historical background of public health services and the context in which they operate; sets out the main organizational structures; assesses the sources of public

health financing and how it is allocated; explains the training and employment of the public health workforce; and analyses existing frameworks for quality and performance assessment. The study reveals a wide range of experience and variation across Europe and clearly illustrates two fundamentally different approaches to public health services: integration with curative health services

(as in Slovenia or Sweden) or organization and provision through a separate parallel structure (Republic of Moldova). The case studies explore the context that explain this divergence and its implications. This study is the result of close collaboration between the European Observatory on Health Systems and

Policies and the WHO Regional Office for Europe Division of Health Systems and Public Health. It accompanies two other Observatory publications Organization and financing of public health services in Europe and The role of public health organizations in addressing public health problems in Europe: the case of obesity alcohol and antimicrobial resistance (both forthcoming).
