The Reasoning Criminologist Routledge

Crime and Intelligence Analysis: An Integrated Real-Time Approach covers everything crime analysts and tactical analysts need to know to be successful. Providing an overview of the criminal justice system as well as the more fundamental areas of crime analysis, the book will enable students and law enforcement personnel to better understand criminal behavior, learn the basics of conducting temporal analysis of crime patterns, use spatial analysis to better understand crime, apply research methods to crime analysis, and more successfully evaluate data and information to help predict criminal offending and solve criminal cases. Criminal justice and police academy students will learn how to be skilled and credible crime analysts who play a critical role in the daily operations of law enforcement.

Samuel Walker's *SENSE AND NONSENSE ABOUT CRIME, DRUGS, AND COMMUNITIES* was one of the first books to challenge common misconceptions about crime, and the new Eighth Edition remains uniquely effective at doing so. Described as a masterful critique of American policies on everything from crime control, to guns, to drugs, this incisive text cuts through popular myths and political rhetoric to confront both conservative and liberal propositions in the context of current research and proven practice. The result is a lucid, research-based work that stimulates critical thinking and enlivens class discussions. This engaging text captures the full complexity of the administration of justice while providing students with a clear sense of its key principles and general patterns. Sense and Nonsense About Crime, Drugs, and Communities SAGE
Crime Prevention Through Environmental Design (CPTED) is a practice-oriented approach to reduce the risk of offences such as burglary and fear of crime by modifying the built environment. In recent years, this approach has been criticised for duplicating terminology and for failing to integrate successfully with other approaches. Rebuilding Crime Prevention Through Environmental Design explores and extends the common ground between CPTED and situational crime prevention – another traditional approach in the field of crime prevention and security – via the latter's evolution into the field of crime science. Drawing on international research to develop new interdisciplinary perspectives, this volume explores how situational crime prevention and environmental criminological theories relate to those of Crime Prevention Through Environmental Design and considers how crime science can be reformulated to merge different approaches, or at least articulate them better. Rebuilding Crime Prevention Through Environmental Design will appeal to students, applied academic researchers and practitioners who wish to deepen their understanding and contribute in turn to the ongoing revitalisation of the field.

An Environmental Criminology and Crime Science Perspective

Routledge

Environmental criminology is a generic label that covers a range of overlapping perspectives. At the core, the various strands of environmental criminology are bound by a common focus on the role that the immediate environment plays in the performance of crime, and a conviction that careful analyses of these environmental influences are the key to the effective investigation, control and prevention of crime. Environmental Crime and Crime Analysis brings together for the first time the key contributions to environmental criminology to comprehensively define the field and synthesize the concepts and ideas surrounding environmental criminology. The chapters are written by leading theorists and practitioners in the field. Each chapter will analyze one of the twelve major elements of environmental criminology and crime analysis. This book will be essential reading for both practitioners and undergraduate and postgraduate students taking courses in this subject.

The Oxford Handbook of Environmental Criminology Routledge

The study of how the environment, local geography, and physical locations influence crime has a long history that stretches across many research traditions. These include the neighborhood effects approach developed in the 1920s, the criminology of place, and a newer approach that attends to the perception of crime in communities. Aided by new technologies and improved data-reporting in recent decades, research in environmental criminology has developed rapidly within each of these approaches. Yet research in the subfield remains fragmented and competing theories are rarely examined together. The Oxford Handbook of Environmental Criminology takes a unique approach and synthesizes the contributions of existing methods to better integrate the subfield as a whole. Gerben J.N. Bruinsma and Shane D. Johnson have assembled a cast of top scholars to provide an in-depth source for understanding how and why physical setting can influence the emergence of crime, affect the environment, and impact individual or group behavior. The contributors address how changes in the environment, global connectivity, and technology provide more criminal opportunities and new ways of committing old crimes. They also explore how crimes committed in countries with distinct cultural practices like China and West Africa might lead to different spatial patterns of crime. This is a state-of-the-art compendium on environmental criminology that reflects the diverse research and theory developed across the western world.

Conservation Criminology Routledge

Criminology has developed strong methodological tools over the past decades, establishing itself as a competitive, sophisticated, and independent social science. Perhaps because of its emphasis on matters of design, methodology, and quantitative analysis, criminology has had few significant advances in theory. Advances in Criminological Theory is the first series exclusively dedicated to the dissemination of original work on criminological theory. The Process and Structure of Crime, the ninth volume in this landmark series, is a thorough overview of the conceptual and empirical issues raised by the adoption of a criminal event perspective, which takes into account the multifaceted character of human behavior. This book is divided into three sections: conceptual

bases of criminal events, the criminal event perspective itself, and responses to criminal events. Contributors analyze and explore a wide range of topics, including: how interpersonal routines are structured through past experience; the influence of social context on interpersonal routines; criminal opportunity and its impact on criminal events; the significance of neighborhood context; the effect of victimization and fear; how problem-oriented policing efforts need to be informed by and reflect the problems of repeat offenders, repeat victims, and hot spots of crime; and finally, how changes in the physical environment constrain or limit criminal opportunities. This fascinating work will be beneficial to criminologists, sociologists, and scholars of legal studies. Contributors to this volume include: Leslie W. Kennedy, Erin Gibbs Van Brunschot, Robert F. Meier, Mark Warr, Christopher Birkbeck, Luis Gerardo Gabaldon, Kriss A. Drass, Terance D. Miethe, Julie Horney, Jeffrey Fagan, Deanna L. Wilkinson, Robert J. Buskirk, Jr., Vincent F. Sacco, Ross Macmillan, John E. Eck, Paul J. Brantingham, and Pat Brantingham.

Field Studies in Environmental Criminology Cengage Learning

Crime statistics are ubiquitous in modern society – but how accurate are they? This book investigates the science of crime measurement focussing on four main questions: how do we count crime? How do we calculate crime rates? Are there other measurements of crime? What are the issues surrounding crime statistics? All too often we take the measurement of crime at face value when there is, in fact, a science behind it. This book specifically deals with issues related to spatially-referenced crime data that are used to analyse crime patterns across the urban environment. The first section of the book considers alternative crime rate calculations. The second section of the book contains a thorough discussion of a measure of crime specialisation. Finally, the third section of the book addresses a number of aggregation issues that are present with such data: crime type aggregations, temporal aggregations of crime data, the stability of crime patterns over time, and the importance of spatial scale. This book builds on a growing body of literature on the science of crime measurement and offers a comprehensive account of this growing subfield of criminology. The book speaks to wider debates in the fields of crime analysis, environmental criminology and crime prevention and will be perfect reading for advanced level undergraduate and graduate students looking to find out more about the measurement of crime.

An Integrated Real-Time Approach Routledge

During the early development and throughout the short history of green/conservation criminology, limited attention has been directed toward quantitative analyses of relevant environmental crime, law and justice concerns. While recognizing the importance of establishing a theory and terminology in the early stages of development, this book redresses this imbalance. The work features contributions that undertake empirical quantitative studies of green/conservation crime and justice issues by both conservation and green criminologists. The collection highlights the shared concerns of these groups within important forms of ecological crime and victimization, and illustrates the ways in which these approaches can be undertaken quantitatively. It includes quantitative conservation/green criminological studies that represent the work of both well-established scholars in these fields, along with studies by scholars whose works are less well-known and who are also contributing to shaping this area of research. The book presents a valuable contribution to the areas of Green and Conservation Criminology. It will appeal to academics and students working in these areas.

Criminal Events and Crime Analysis Routledge

Environmental crime is one of the most profitable and fastest growing areas of international criminal activity. These types of crime, however, do not always produce an immediate consequence, and the harm may be diffused. As such, the complexity of victimization - in terms of time, space, impact, and who or what is victimized - is one of the reasons why governments and the enforcement community have trouble in finding suitable and effective responses. This book provides a diverse and provocative array of arguments, critiques and recommendations from leading researchers and scholars in the field of green criminology. The chapters are divided into three main sections: the first part deals with specific characteristics of some of the major types of environmental crime and its perpetrators; the second focuses explicitly on the problem of victimization in cases of environmental crime; and the third addresses the question of how to tackle this problem. Discussing these topics from the point of view of green criminological theory, sociology, law enforcement, community wellbeing, environmental activism and victimology, this book will be of great interest to all those concerned about crime and the environment.

Practicing Forensic Criminology draws on examples from actual court cases and expert witness reports and testimony to demonstrate the merits and uses of substantive criminological knowledge in the applied setting of civil law and the courts. Throughout the book, the authors provide a highly readable, informative discussion of how forensic criminologists can apply their research and teaching skills to assist judges and juries in rendering legal decisions. Engaging and lively, the chapters include excerpts from forensic criminological investigations, in-depth discussions of the methodological and analytical bases of these investigations, and important lessons learned from real litigation cases. Case examples are drawn from the forensic realms of premises liability, administrative negligence, workplace violence, wrongful conviction litigation, and litigation involving police departments and corrections facilities. Well referenced and thoroughly researched, Practicing Forensic Criminology serves as an introduction to the vast and heterogeneous field of forensic social science that is rapidly changing and expanding. This unique and original book guides readers through the research work of

expert witnesses working as consultants, researchers, and crime analysts and investigators. Offering expert criminological insights into litigation cases, the chapters reveal how forensic social science research can be an effective mechanism for reaching beyond the academy to influence public policy reform and legal proceedings. Practicing Forensic Criminology will appeal to a diverse audience, including social scientists, criminal justice students and researchers, expert witnesses, attorneys, judges, and students of judicial proceedings seeking to understand the value and impact of criminology in the civil court system. Introduces readers to the impact of evidence-based criminological theory and forensic social science investigations in the legal system Demonstrates the usefulness of forensic criminology as a research tool, revealing novel relational dynamics among crime events and the larger socio-spatial context Advances the development of a "translational criminology" - i.e., the translation of knowledge from criminological theory and research to forensic practice - as an expedient to forming robust interactive relationships among criminological social scientists and policy makers

In the last decade there has been a phenomenal growth in interest in crime pattern analysis. Geographic information systems are now widely used in urban police agencies throughout industrial nations. With this, scholarly interest in understanding crime patterns has grown considerably. Artificial Crime Analysis Systems: Using Computer Simulations and Geographic Information Systems discusses leading research on the use of computer simulation of crime patterns to reveal hidden processes of urban crimes, taking an interdisciplinary approach by combining criminology, computer simulation, and geographic information systems into one comprehensive resource.

ISSUES FOR SPATIALLY-REFERENCED CRIME DATA

Routledge

This book includes fieldwork from five continents and demonstrates the breadth of techniques used by environmental criminologists to understand crime. Environmental criminologists seek to understand crime within the physical, and even digital, contexts where it occurs - believing that crime occurs when people converge in time and space and that the environment impacts the opportunity for crime. Understanding the environment aids the researcher in answering an essential question: what can be done to alter the place to prevent or reduce crime? However, to understand complex environmental influences, researchers need to engage in fieldwork. Fieldwork involves researchers entering the environment they are studying to observe, listen, and experience the surroundings in a way that influences their understanding of the place and people in the environment. This book highlights the broad array of crime types - from package theft in the suburbs to poaching in the Nile basin - that environmental criminology is well suited to address. Finally, it advances methods and techniques, tests established protocols, and offers reflections on experiences during fieldwork, demonstrating the value of the techniques for environmental criminology and offering solutions to crime problems. The chapters in this book were originally published as a special issue of Criminal Justice Studies.

A Brief Introduction Oxford University Press

Crime and Everyday Life offers a bold approach to crime theory and crime reduction. Using a clear, engaging, and streamlined writing style, the Sixth Edition illuminates the causes of criminal behavior, showing how crime can affect everyone in both small and large ways. Renowned authors Marcus Felson and Mary Eckert then offer realistic ways to reduce or eliminate crime and criminal behavior in specific settings by removing the opportunity to complete the act. Most importantly, this book teaches students how to think about crime, and then do something about it.

REBUILDING CRIME PREVENTION THROUGH ENVIRONMENTAL DESIGN

Crime and Everyday Life, Fifth Edition, offers a bold approach to crime theory and crime reduction. The text shows how crime opportunity is a necessary condition for illegal acts to occur. The authors offer realistic, often common-sense, ways to reduce or eliminate crime and criminal behavior in specific settings by removing the opportunity to complete the act. Using a clear and engaging writing style, author Marcus Felson and new co-author Mary Eckert talk directly to the student about criminal behavior, the routine activity approach, and specific crime reduction ideas. The authors emphasize how routine daily activities set the stage for illegal acts -- offering fascinating new ideas and examples not presented in earlier editions. Most importantly, this book teaches the student how to think about crime, and then do something about it.
