Harary [2] wrote the book Distance in Graphs. The 2004 Handbook of Graph Theory, edited by Gross and Yellen [18], contains a section devoted

exclusively to distance in graphs. A number of results on distance come from the fact that two vertices  $u$  and  $v$  areDistance in Graphs - Taking the

Long ViewABSTRACT: The eccentricity  $e(u)$  of a vertex  $u$  is the maximum distance of  $u$  to any other vertex of  $G$ . A vertex  $v$  is an eccentric vertex of

vertex  $u$  if the distance from  $u$  to  $v$  is equal to  $e(u)$ . The eccentric digraph  $ED(G)$  of a graph (digraph)  $G$  is the digraph that has the same vertex as  $G$

and an arc from  $u$  to  $v$  exists in  $ED(G)$  if and only if  $v$  is an eccentric vertex of  $u$  in  $G$ .F. Buckley and F. Harary, "Distance in Graphs," Addison

The Steiner distance in a graph, introduced by Chartrand et al. in 1989, is a natural generalization of the concept of classical graph distance. For a connected graph  $G$  of order at least 2 and  $S \subseteq V(G)$ , the Steiner distance  $d(S)$  of the vertices of  $S$  is the minimum size of a connected subgraph whose vertex set is  $S$ .

### DISTANCE IN GRAPHS - FRED BUCKLEY, FRANK HARARY - GOOGLE BOOKS

ABSTRACT: The eccentricity  $e(u)$  of a vertex  $u$  is the maximum distance of  $u$  to any other vertex of  $G$ . A vertex  $v$  is an eccentric vertex of vertex  $u$  if the distance from  $u$  to  $v$  is equal to  $e(u)$ . The eccentric digraph  $ED(G)$  of a graph (digraph)  $G$  is the digraph that has the same vertex as  $G$  and an arc from  $u$  to  $v$  exists in  $ED(G)$  if and only if  $v$  is an eccentric vertex of  $u$  in  $G$ .
