This book is easily one of the best works yet on how to make corporate social investment work for the benefit of ordinary people ... should be required reading by every CSI practitioner in Africa and abroad - much time, money and energy could be saved. - PROFESSOR JONATHAN JANSEN
Developing an impactful corporate social investment (CSI) strategy and approach with real potential to positively change people's lives can be a tricky exercise. Those grappling with how best to approach CSI will find thought-provoking insights in this book that will contribute positively to how they view, shape and execute their CSI strategy. In a most accessible way, this guidebook on CSI presents an instructive and constructive way of building a CSI strategy. Setlogane Manchidi, Head of CSI at Investec, is known in the CSI space for his passion and strong desire to see meaningful change in people's lives. In this book, informed by his experiences as a CSI practitioner over the years, he unpacks what he considers to be essential aspects of CSI practice. Manchidi adopts and articulates a question-based approach to creating an effective CSI strategy. Recognising that business is not separate from society, Manchidi suggests that companies need to ask themselves some serious questions, amongst them: Why should they be doing CSI and, importantly, why are they doing it? The questions, which are reflected on the cover of the book, are difficult ones which require complete honesty, deep consideration and the necessity of placing 'impact' at the centre of the formulation of CSI strategy. Through this book, Corporate Social Investment, Setlogane Manchidi reminds us of the significance of a carefully considered CSI strategy and approach, especially on a continent such as Africa with many socio-economic challenges that continue to impact negatively on ordinary people's day-to-day lives.

Economics for a Developing World Routledge

The development of the endogenous growth model rekindled interest in growth theory. In contrast to the neo-classical model, long-run endogenous growth emerged as an equilibrium outcome, reflecting the behaviour of optimizing agents in the economy. This book brings together a number of

contributions in growth theory and macroeconomic dynamics, reflecting these developments and the ongoing debate over the relative merits of neo-classical and endogenous growth models. It focuses on the emergence of three important aspects: First, it develops growth models that extend the underlying theory in different directions. Second, it addresses one of the concerns of the literature on growth and dynamics: the statistical properties of underlying data and the effort to ensure that growth models are consistent with empirical evidence. Third, it discusses the increasingly international focus of macrodynamics and growth theory, an inevitable consequence of the integration of the world economy.

Poor Economics United Nations Publications

This book examines the role of agriculture in the economic transformation of developing low- and middle-income countries and explores means for accelerating agricultural growth and poverty reduction. In this volume, Mellor measures by household class the employment impact of alternative agricultural growth rates and land tenure systems, and impact on cereal consumption and food security. The book provides detailed analysis of each element of agricultural modernization, emphasizing the central role of government in accelerated growth in private sector dominated agriculture. The book differs from the bulk of current conventional wisdom in its placement of the non-poor small commercial farmer at the center of growth, and explains how growth translates into poverty reduction. This new book is a follow up to Mellor's classic, prize-winning text, *The Economics of Agricultural Development*. Listed as a Best Books of 2017: Economics by Financial Times.

NGOs and the Millennium Development Goals Bloomsbury Publishing

The winners of the Nobel Prize in Economics upend the most common assumptions about how economics works in this gripping and disruptive portrait of how poor people actually live. Why do the poor borrow to save? Why do they miss out on free life-saving immunizations, but pay for unnecessary drugs? In *Poor Economics*, Abhijit V. Banerjee and Esther Duflo, two award-winning MIT professors, answer these questions based on years of field research from around the world. Called "marvelous, rewarding" by the Wall Street Journal, the book offers a radical rethinking of the economics of poverty and an intimate view of life on 99 cents a day. *Poor Economics* shows that creating a world without poverty begins with understanding the daily decisions facing the poor.

Promoting Growth with Poverty Reduction Studies in Development Economi

This collection of essays honors a remarkable man and his work. Erik Thorbecke has made significant contributions to the microeconomic and the macroeconomic analysis of poverty, inequality and development, ranging from theory to empirics and policy. The essays in this volume display the same range. As a collection they make the fundamental point that deep understanding of these phenomena requires both the micro and the macro perspectives together, utilizing the strengths of each but also the special insights that come when the two are linked together. After an overview section which contains the introductory chapter and a chapter examining the historical roots of Erik Thorbecke's motivations, the essays in this volume are grouped into four parts, each part identifying a major strand of Erik's work—Measurement of Poverty and Inequality, Micro Behavior and Market Failure, SAMs and CGEs, and Institutions and Development. The range of topics covered in the essays, written by leading authorities in their own areas, highlight the extraordinary depth and breadth of Erik Thorbecke's influence in research and policy on poverty, inequality and development. Acknowledgements These papers were presented at a conference in honor of Erik Thorbecke held at Cornell University on October 10-11, 2003. The conference was supported by the funds of the H. E. Babcock Chair in Food, Nutrition and Public Policy, and the T. H. Lee Chair in World Affairs at Cornell University.
