Elements of Electrical Engineering: October 2014 Electrical conduction starts only if there is breakage in the covalent bonds and some of the electrons become free to jump from valence band to the conduction band. The minimum energy required to break the covalent bond in germanium crystal is 0.72 eV and for silicon its value is 1.1 eV. Elements of Electrical Engineering: August 2011 The cover is fading and it does carry a stamp with a previous name. Although, this edition does include the answers for the problems.
