Diesel EngineThe diesel engine (also known as a compression-ignition or CI engine), named after Rudolf Diesel, is an internal combustion engine in which ignition of the fuel is caused by the elevated temperature of

the air in the cylinder due to the mechanical compression (adiabatic compression).Diesel engine - WikipediaThe diesel engine gains its energy by burning fuel injected or sprayed into the compressed, hot air charge within the cylinder. The air must be heated to a temperature greater than the temperature at which the

injected fuel can ignite.
