Economic Development: Tenth Edition Routledge

"Economic Development, the leading textbook in this field, provides your students with a complete and balanced introduction to the requisite theory, driving policy issues, and latest research. Todaro and Smith take a policy-oriented approach, presenting economic theory in the context of critical policy debates and country-specific case studies, to show how theory relates to the problems and prospects of developing countries."--Publisher's description

Ethical Data Mining Applications for Socio-Economic Development Springer

Africa faces several major development challenges that have adversely affected the political and material well being of the majority of the people living there. This collection of new essays rigorously analyzes those frontier development issues--including democracy, leadership, the economy, poverty alleviation through microfinance schemes, food security, education, health and political instability--and offers prescriptions that differ from the dominant neoliberal solutions.

GLOBALIZATION AND DEVELOPMENT VOLUME III

SAGE

This book examines the impact of financing on Africa's economic

development. By exploring various financial instruments including the role of alternative sources of funding like migrant remittances and illicit flows, it analyses the role of financing for Africa's macroeconomic development and other development indicators such as infrastructure, transport, global trade, industrialisation, social services, external indebtedness and governance. By presenting and examining case studies on various African countries and regions, the respective contributions investigate the capacity of institutions to facilitate and structure the economy's funding activities, and to strengthen the ties between finance and development. Furthermore, they discuss various regional aspects, such as the integration of infrastructure, harmonization of fiscal policy, integration of financial markets, and the facilitation of intra-regional trade and movement of capital. Given its scope, the book will appeal to scholars of economics and development studies with an interest in the economic development of Africa.

FINANCING AFRICA'S DEVELOPMENT

Springer

The book is orientated towards the teaching of economics within the context of the major problems of development and underdevelopment in Third World nations and fills a major void in the teaching materials available for this purpose. It has been written for use by first-year economic students at universities throughout Africa, Asia, Latin America and the Middle East.

The Paradigm of International Social Development Oxford

University Press, USA

A result of more than four decades of teaching experience, this book deals with the problems of economic growth, development and eradication of poverty and unemployment. The book also includes an analytical study of important issues of environment and sustainable development. The book not only explains the models and theories of economic growth but also critically evaluates their relevance to developing countries. A major highlight of discussion in the context is the exploration of the widely accepted Amartya Sen's Capability Approach to development.

Hemp and the Global Economy Routledge

The rapid evolution of events in the European, Middle Eastern, and North African spheres has reinvigorated the debate on Euro-Mediterranean relations. Since 1995 these relations have operated under the auspices of the Barcelona Process, which laid the foundations for three initiatives that define European policy towards neighbouring states: the Euro-Mediterranean Partnership, the European Neighbourhood Policy, and the Union for the Mediterranean. This book scrutinises these initiatives through a socioeconomic prism. Adam Yousef reviews how appropriate these initiatives have been in promoting socioeconomic development in North African states, projects the long-term implications of these policies and investigates whether they can reduce the gap in social outcomes across the Mediterranean Basin over time. Using Morocco as a case study, this book employs a mixed-methods approach, combining qualitative and quantitative data as well as economic theory. It reveals not only that the Barcelona Process has had a limited impact on promoting social outcomes in Morocco, but crucially that it is also unlikely to do so in the future, suggesting a new approach may be required.

This book uses lessons from history to help African countries take charge of their own economic development agenda. History is an important part of Africa's economic development narrative, and Ocran investigates how the development outcomes between Africa and Western Europe became so divergent when in the early medieval period average income levels and economic development in the two regions differed only marginally. The sixteenth century marked a turning point, with the emergence of Western European mercantilism and capitalism and their associated exploitation of other countries. In understanding Africa's economic development, it is crucial to recognise that Africa has not always been poor. Examining 400 years of enslavement and colonisation, this book takes us to present day Africa and economic issues affecting the continent. With selected case studies from Hong Kong, Taiwan, and Singapore to South Korea and China, Ocran proposes ways to break out of the economic development quandary Africa currently faces.

This book reveals how conflicting worldviews are at the root of public controversies on policy and trade issues. It highlights the particularly controversial disputes at the level of the World Trade Organization in the case of regulating beef-hormones and GMOs, aiming to show how negotiators of international agreements, members of dispute settlement bodies, and policy makers in general could have recourse to concepts of other disciplines such as epistemology and philosophy in order to address deadlocked legal disputes. Ultimately, the book is a manifesto for independent and critical research.

Move Towards Zero Hunger Financial Times/Prentice Hall

Despite increasing reports across the globe on renewable

development and maintenance, little is known regarding what strategies are required for improved economic growth and prosperity in Africa. Improving an understanding of the methods for promoting growth through reusable resource development and administration is a vital topic of research to consider in assisting the continent's development. The Handbook of Research on Sustainable Development and Governance Strategies for Economic Growth in Africa provides emerging research on the strategies required to promote growth in Africa as well as the implications and issues of the expansion of prosperity. While highlighting sustainable education, pastoral development pathways, and the public-sector role, readers will learn about the history of sustainable development and governmental approaches to improving Africa's economy. This publication is a vital resource for policy makers, research institutions, academics, researchers, and advanced-level students seeking current research on the theories and applications of development in societal and legal institutions.

A Short History of Ethics and Economics Pearson UK

Carlin and Soskice integrate the financial system with a model of the macro-economy. In doing this, they take account of the gaps in the mainstream model exposed by the financial crisis and the Eurozone crisis. This equips the reader with a realistic modelling framework to analyse the economy both in crisis times and in periods of stability.

ECONOMICS AND DEVELOPMENT STUDIES

Routledge

This book examines the current development of high tech industrial hemp applications by investigating rich historical precedent. In antiquity, hemp production influenced economic growth and cultural norms, including the evolution and decline of feudalism and slavery. Today, hemp manufacturing shapes global labor, innovation, and trade practices.

ECONOMIC DEVELOPMENT IN THE TWENTY-FIRST CENTURY

Springer

This prize-winning study "takes a unique ethnographic approach to reconstructing the history of Nairobi's privately owned urban transport" (Martin A. Klein Prize Committee, American Historical Association). Drive the streets of Nairobi, and you are sure to see many matatus—colorful minibuses that transport huge numbers of people around the city. Once ramshackle affairs held together with duct tape, matatus today are name-brand vehicles maxed out with aftermarket detailing. They can be stately black or extravagantly colored, sporting names, slogans, and airbrushed portraits of everyone from Kanye West to Barack Obama. In this richly interdisciplinary book, Kenda Mutongi explores the history of the matatu from the 1960s to the present. As Mutongi shows, matatus offer a window onto the socioeconomic and political conditions of late-twentieth-century Africa. In their diversity of idiosyncratic designs, they reflect divergent aspects of Kenyan life—from rapid urbanization and the transition to democracy to organized crime, entrepreneurship, social insecurity, and popular culture. Offering a shining model of interdisciplinary analysis, Mutongi mixes historical, ethnographic, literary, linguistic, and economic approaches to tell the story of the matatu and explore the entrepreneurial aesthetics of the postcolonial world.

IGI Global

While geopolitics has captured global attention, geoeconomics is

the often hidden force that governs countries' relationships. It is the economic psyche that shapes the new world order. Geoeconomics refers to the intersection of economic factors, relationships and conditions on global events. A country's political and business alignments have an impact on individuals, companies and on future economic stability. This book assembles leading scholars and experts from around the world to advance current thinking on geoeconomics. It is a thorough and authoritative reference work on world economics that aims to shape strategy formulation in business and government for years to come by expanding understanding on the topic of geoeconomics, analyzing the implications of international geoeconomic events, and providing the reader with theoretical and practical approaches on the management of geoeconomics. Geoeconomic concepts in this book will prove timely and highly insightful to students, academics, executives, entrepreneurs, government officials, consultants and policymakers.

Development studies textbooks and courses have sometimes tended to avoid significant economic content. However, without an understanding of the economic aspects of international development many of the more complex issues cannot be fully comprehended. *Economics and Development Studies* makes the economic dimension of discourse around controversial issues in international development accessible to second and third year undergraduate students working towards degrees in development studies. Following an introductory chapter outlining the connections between development economics and development studies, this book consists of eight substantive chapters dealing with the nature of development economics, economic growth and structural change, economic growth and developing countries, economic growth and economic development since 1960, the global economy and the Third World, developing countries and international trade, economics and development policy, and poverty, equality and development economists, with a tenth concluding chapter. This book synthesizes existing development economics literature in order to identify the salient issues and controversies and make them accessible and understandable. The concern is to distinguish differences within the economics profession, and between economists and non-economists, so that the reader can make informed judgments about the sources of these differences, and about their impact on policy analysis and policy advice. The book features explanatory text boxes, tables and diagrams, suggestions for further reading, and a listing of the economic concepts used in the chapters.

The study of development in low-income countries is attracting more attention around the world than ever before. Yet until now there has been no comprehensive text that incorporates the huge strides made in the subject over the past decade. *Development Economics* does precisely that in a clear, rigorous, and elegant fashion. Debraj Ray, one of the most accomplished theorists in development economics today, presents in this book a synthesis of recent and older literature in the field and raises important questions that will help to set the agenda for future research. He covers such vital subjects as theories of economic growth, economic inequality, poverty and undernutrition, population growth, trade policy, and the markets for land, labor, and credit. A common point of view underlies the treatment of these subjects: that much of the development process can be understood by studying factors that impede the efficient and equitable functioning of markets. Diverse topics such as the new growth theory, moral hazard in land contracts, information-based

theories of credit markets, and the macroeconomic implications of economic inequality come under this common methodological umbrella. The book takes the position that there is no single cause for economic progress, but that a combination of factors--among them the improvement of physical and human capital, the reduction of inequality, and institutions that enable the background flow of information essential to market performance--consistently favor development. Ray supports his arguments throughout with examples from around the world. The book assumes a knowledge of only introductory economics and explains sophisticated concepts in simple, direct language, keeping the use of mathematics to a minimum. *Development Economics* will be the definitive textbook in this subject for years to come. It will prove useful to researchers by showing intriguing connections among a wide variety of subjects that are rarely discussed together in the same book. And it will be an important resource for policy-makers, who increasingly find themselves dealing with complex issues of growth, inequality, poverty, and social welfare.

Economic Development: Tenth Edition

Business and Economics of Port Management is a comprehensive but concise textbook and reference for insights into the workings of port industry from the business and economics perspectives. The book examines port management from various entities which include the government, port operator, shipping line, logistics companies and other port service providers. It provides in-depth discussions on strategic issues, challenges and disruptions that are faced by this industry. Given the uniqueness of each port and international nature of the port business, the book comes with useful case studies and lessons from different port regions around the world. Key lessons on challenges and issues faced by port managers, developers and regulators are highlighted and discussed using a combination of professional insights and publicly available information sources. The aim is to illustrate the decision-making process with the purpose of contributing to better outcomes for the industry, government and the public at large. Anyone who is approaching the subject matter will gain utmost understanding of how ports are critical in the global economy and societal well-being.

Some geographic regions around the globe that are rich in terms of modern agriculture technologies, face a dilemma when it comes to storing excess produce, such as grains and even seasonal fruits and vegetable. They are often forced to destroy the surplus agricultural products due to the constraints of poor logistic systems, food warehouses and micro-economy system management. In contrast, millions of people in extreme rural areas are suffering from hunger and poverty. This book offers suggestions to resolve the problems of food security and poverty in rural areas and ensure minimum social justice so that those in rural areas have regular access to food and shelter. It also discusses how to develop sustainable foundations in extreme rural locations using indigenous resources to tackle issues like hunger, malnutrition, and chronic health problems.

Infrastructure Investments in Developing Economies

Princeton University Press

The development of a nation can be influenced by a wide range of factors. In the modern era of globalization, under-developed countries must strive to catch up to developed nations and establish themselves in the global market. *The Handbook of Research on Global Indicators of Economic and Political Convergence* is a pivotal reference source for the latest scholarly research on social, political, and environmental variables that

affect the ability of developing countries to reach an equal standing in the global economy. Highlighting theoretical foundations, critical analyses, and real-world perspectives, this book is ideally designed for researchers, analysts, professionals, and upper-level students interested in emerging convergence and divergence trends in modern countries.

ECONOMIC DEVELOPMENT

Springer Nature

The contemporary orthodox view of world trade has centred, generally unchallenged, on the ideas of free trade, based on the theoretical construct of comparative advantage. This book will engage in a critique of the orthodox position based on the underlying theoretical economic construct, the historical development of the now developed economies and the morally unsustainable position of the free-trade regime. The author examines alternatives such as Most Favoured Nation and Preferential Trading Agreements before making the argument in favour of Asymmetric Trading, where the underdeveloped economies can develop behind tariff barriers and quotas, whilst the triadic nations maintain a lack of barriers to the exports of these economies. He outlines how such a trading regime would be mutually beneficial in the long term, in the sense that development through industrialisation takes place and the increase in GDP per capita would allow markets for exports to be sustainable, thus widening the market for the goods and services of the developed economies. However, the author demonstrates

that free trade actually increases the development gap by maintaining the status quo in terms of the underdeveloped economies specialising in and exporting low value-added primary products and importing high value-added manufactures. The book analyses contemporary and historical data to illustrate how an alternative trading regime can be truly advantageous to both the developed and underdeveloped regions of the world: a global trading regime that is capable of increasing GDP in a sustainable manner without transferring a surplus from the poor to the rich nations and without a long-term commitment on the part of the developed nations to altruism.
