The stakes are high, time is of the essence and every detail matters—yet neonatal pharmacology often has been a challenging and poorly understood area of pediatrics. Until now. Many pharmacists working in hospital pharmacies today have little or no formal training in neonatology yet they are faced with dispensing medications to this fragile NICU population. NICU Primer for Pharmacists, by Amy P. Holmes, is a unique comprehensive overview of pharmacological treatment and neonatal care puts the information pharmacists, students, and residents need in one place, including strategies for: Selecting the optimal drug at the right dose within hours of recognizing a problem Detecting and correcting product dilutions Overseeing dosing adjustments as patients mature, increase or lose body weight Accommodating for multiple concurrent diseases, dramatic growth, organ maturation and damage and more Maximizing survival without serious long-term damage and neurodevelopmental delays. NICU Primer for Pharmacists puts the information you need in one place, so you can feel more confident making medication decisions for your tiniest patients. If your team cares for neonatal patients, consider this guide your invaluable resource for safe and effective drug therapy.

This is an inclusive reference exploring the scientific basis and practice of drug therapy. The key concept is to look at the balance between the benefits and risks of drugs but in this context also the social impact which drugs have in modern societies is highlighted. Taking an evidence-based approach to the problem, the practice of clinical pharmacology and pharmacotherapy in the developing as well as the developed world is examined. For this purpose the book \* Covers general clinical pharmacology, pharmacology of various drug groups and the treatments specific to various diseases \* Gives guidance on how doctors should act so that drugs can be used effectively and safely \* Encourages the rational use of drugs in society This book brings together a large amount of excellent content that will be invaluable for anyone working within, or associated with, the field of clinical pharmacology and pharmacotherapy - undergraduates, postgraduates, regulatory authorities and the pharmaceutical industry.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.
