A non-major introduction to human/cultural geography that focuses on culture, society, and

human activity from a geographic perspective. The book is also designed for majors taking their first course in Human Geography. Fellmann provides a thorough, classic, up-to-date, and balanced approach to this broad range of topics. Among the most distinctive and important features of the text is its thorough and well-integrated coverage of gender roles in society and culture. Instructors and students using the sixth edition update will have access to PowerWeb, a course-specific website developed with the help of instructors teaching the course to provide instructors and students with curriculum-based materials, updated weekly assessments, informative and timely world news, refereed web links and much more.

Contesting Landscape and Human Rights National Academies Press

This study contains 20 specially commissioned essays which attempt to present a critical challenge to the philosophical positivism of the "New Geography". The work attempts to shed light on the relationship between human agency and social

and spatial structures.

Landscapes of Human Activities Routledge
Compiling nine authoritative essays spanning an extensive academic career, author Kenneth R. Olwig presents explorations in landscape geography and architecture from an environmental humanities perspective. With influences from art, literature, theatre staging, architecture, and garden design, landscape has come to be viewed as a form of spatial scenery, but this reading captures only a narrow representation of landscape meaning today. This book positions landscape as a concept shaped through the centuries, evolving from place to place to provide nuanced interpretations of landscape meaning. The essays are woven together to gather an international approach to understanding the past and present importance of landscape as place and polity, as designed space, as nature, and as an influential factor in the shaping of ideas in a just social and physical environment. Aimed at students, scholars, and researchers in landscape and beyond, this illustrated volume traces

the idea of landscape from the ancient polis and theatre through to the present day.

Human Geography

Prentice Hall

The growth economies of Southeast Asia are presented by the World Bank and others as exemplars of development - 'miracle' economies to be emulated. How did the region attain such status? Are the 'other' countries of Southeast Asia able to achieve such a rapid growth? This book charts the development of Southeast Asia, examining the economies of Vietnam, Laos, Cambodia and Burma alongside the established Asian market economies. Drawing on case studies from across the region, the author assesses poverty and ways in which the poor are identified and viewed. Process and change in the rural and urban 'worlds' are examined in detail, focusing on the strengthening rural-urban interaction as 'farmers' make a living in the urban-industrial sector and factories relocate into agricultural areas. Giving prominence to indigenous notions of development, based on Buddhism, Islam and the so-called 'Asian Way', the author critically

assesses the conceptual foundations of development, ideas of post-developmentalism, and the 'miracle' thesis. In the light of the experience of one of the most vibrant regions in the world, the book places emphasis on the process of modernization within wider debates of development and challenges the notion that development has been a mirage for many and a tragedy for some.

The Peopling of Britain
Routledge

This volume tackles the complex terrain of theory and methods, seeking to exemplify the major philosophical, social-theoretic and methodological developments - some with clear political and ethical implications - that have traversed human geography since the era of the 1960s when spatial science came to the fore. Coverage includes Marxist and humanistic geographies, and their many variations over the years, as well as ongoing debates about agency-structure and the concepts of time, space, place and scale. Feminist and other 'positioned' geographies, alongside poststructuralist and posthumanist

geographies, are all evidenced, as well as writings that push against the very 'limits' of what human geography has embraced over these fifty plus years. The volume combines readings that are well-known and widely accepted as 'classic', with readings that, while less familiar, are valuable in how they illustrate different possibilities for theory and method within the discipline. The volume also includes a substantial introduction by the editor, contextualising the readings, and in the process providing a new interpretation of the last half-century of change within the thoughts and practices of human geography.

LANDSCAPES OF HUMAN ACTIVITIES

McGraw-Hill
Science/Engineering/Math
The study of landscapes has become so profound in its approaches that its incursion into society has confronted the scientific community with several 'views' that link a broad path across various academic disciplines. This volume offers essential insights into the concepts and applications of some emerging perspectives in this field. Instead of focusing on only

organisms or nature in order to better understand the world and its development, this book places humans and physical aspects at the centre of its focus, combining practical and experimental studies on nonhuman model organisms, ecological and geographical information, nature conservation and territorial planning, and the study of humans and society.

The Right to Landscape
Cambridge Scholars
Publishing

Human Landscapes in Classical Antiquity shows how today's environmental and ecological concerns can help illuminate our study of the ancient world. The contributors consider how the Greeks and Romans perceived their natural world, and how their perceptions affected society. The effects of human settlement and cultivation on the landscape are considered, as well as the representation of landscape in Attic drama. Various aspects of farming, such as the use of terraces and the significance of olive growing are examined. The uncultivated landscape was also important: hunting was a

key social ritual for Greek and hellenistic elites, and 'wild' places were not wastelands but played an essential economic role. The Romans' attempts to control their environment are analyzed. This volume shows how Greeks and Romans worked hand in hand with their natural environment and not against it. It represents an outstanding collaboration between the disciplines of history and archaeology.

LANDSCAPES OF HUMAN ACTIVITIES

John Wiley & Sons
 "This thirteen edition of Human Geography retains the organization and structure of its earlier versions. Like them, it seeks to introduce its users to the scope and excitement of geography and its relevance to their daily lives and roles as informed citizens. We recognize that for many students, human geography may be their first or only work in geography and this, their first or only textbook in the discipline. For these students particularly, we seek to convey the richness and breadth of human geography and to give insight into the nature and intellectual challenges of the field of geography itself. Our

goals are to be inclusive in content, current in data, and relevant in interpretations. These goals are elusive. Because of the time lapse between world events and the publication of a book, events inevitably outpace analysis. We therefore depend on a continuing partnership with classroom instructors to incorporate and interpret current events and emerging geographic patterns"--

Landscape Macmillan Higher Education
 Human geographers have been at the forefront of research that examines the relationships between space, culture and society. This volume contains twenty-one essays, published over the past thirty years, that are iconic instances of this investigative field. With a focus on four broad themes - landscape, identity, colonialism, nature - these essays represent some of the best and most innovative interventions that geographers have made on these topics. From the visual to the corporeal, from rural Ceylon to urban America and from the sixteenth century to the twenty-first, this volume brings together a set of theoretically sophisticated

and empirically grounded works.

Conceptions of Physical and Human Space

Cram101

Fellmann et al's "Human Geography" introduces students to the scope and excitement of human geography and its relevance to their daily lives. This edition continues to convey the breadth of human geography and to provide insight into the nature and intellectual challenges of the field of geography itself. The authors pay special attention to gender issues and assume no previous experience in geography on the part of the students.

Landscapes of Human Activities Prentice Hall

For courses in Human Geography. Strengthening readers' connection to geography through active, discovery-based learning Trusted for its timeliness, readability, and sound pedagogy, The Cultural Landscape: An Introduction to Human Geography emphasizes the relevance of geographic concepts to human challenges. The relationship between globalization and diversity is woven throughout; Rubenstein addresses these themes with a clear organization and presentation that engages students and appeals to instructors. The Twelfth Edition challenges readers to apply geography tools and techniques to their local environments, bridging the global and the local, and getting students to interact with their local geography. New applied activities and debate features as well as integration of BBC videos into eText 2.0, further strengthens readers' ties to the geography all around them. Also

Introduction to Human Geography

HUMAN LANDSCAPES IN CLASSICAL ANTIQUITY

Macmillan International Higher Education

Michael Kuby's 6th edition of Human Geography in Action is comprised of 14 stimulating, concept-based chapters. The text aims to develop geographic problem-solving skills that prove valuable to readers. Each chapter begins with an introduction to a concept, followed by a case study tying the concept into the real world and wraps up with an activity. These engaging activities featured throughout the text further its "Do Geography" approach. Human Geography in Action provides the opportunity to: use GIS to investigate ethnic distributions and culture regions, track the AIDS epidemic over space and time, model interstate migration flows, simulate India's demographic future, add new baseball franchises, animate past urban growth and assess future growth areas. Landscapes of Human Activities Pacific Palisades, Calif : Goodyear Publishing Company

From the oceans to continental heartlands, human activities have altered the physical characteristics of Earth's surface. With Earth's population projected to peak at 8 to 12 billion people by 2050 and the additional stress of climate change, it is more important than ever to understand how and where these changes are happening. Innovation in the geographical sciences has the potential to advance knowledge of place-based environmental change, sustainability, and the impacts of a rapidly changing economy and society. Understanding the Changing Planet outlines eleven strategic directions to focus research and leverage new technologies to harness the potential that the geographical sciences offer.

Essays on Place, Space, Environment and Justice

Routledge

Reconstructing Human-Landscape Interactions demonstrates the high quality of work presented at the first Developing International Geoarchaeology conference (DIG 2005), held in Saint John, New Brunswick, Canada, and exemplifies the over-

riding theme of this discipline. People have always used the landscape in many ways: as a place to live, as a place to grow crops, as a source of natural resources. Those actions leave their traces. The characteristics of the landscape constrain which activities are possible, just as social and cultural habits condition people's connection with the environment.

Geoarchaeology is about finding the traces of these interactions, and using them to reconstruct how people in the past behaved in their environmental context. The material covered in the proceedings ranges from broad themes of climate change and landscape use, to more specific subjects such as river avulsion and the use of tidal ponds. The papers move us from the land to the coastal margin and back onto land to examine particular techniques. The final paper leads us beyond archaeology and points out that geoarchaeological data must contribute to the debate about the sustainability of present-day land-use practices: a fitting challenge to take us into the future.

A Social Science Fiction Anthology OUP Oxford

This book, first published in 1981, explores why it is that the modern built environment, while successfully providing material comfort and technical efficiency, none the less breeds despair and depression rather than inspires hope and commitment. The source of this paradox, where material benefits appear to have been gained only at the expense of intangible values and qualities is found in humanism, the persistent and powerful belief that all problems can be solved through the use of human reason. But humanism has become increasingly confused, rationalistic, callously devoted to efficiency, and authoritarian. These confusions and contradictions, together with the anti-nature stance of humanism and its failure to teach humane behaviour, lead the author to conclude that humanism is best rejected. Such rejection does not advocate the inhuman and anti-human, but requires instead a return to the 'humility' that lies at the origin of humanism – a respect for objects, creatures, environments and people.

This 'environmental humility' is explored in the context of individuality of settings, ways of seeing landscapes, appropriation and ways of building places. This title will be of interest to students of human geography.

Culture, Globalization, Landscape Routledge
Associating social justice with landscape is not new, yet the twenty-first century's heightened threats to landscape and their impact on both human and, more generally, nature's habitats necessitate novel intellectual tools to address such challenges.

This book offers that

innovative critical thinking framework. The

establishment of the

Universal Declaration of

Human Rights (UDHR) in

1948, in the aftermath of

Second World War

atrocities, was an

aspiration to guarantee

both concrete necessities

for survival and the

spiritual/emotional/psychological needs that are

quintessential to the

human experience. While

landscape is place, nature

and culture specific, the

idea transcends nation-

state boundaries and as

such can be understood

as a universal theoretical

concept similar to the way

in which human rights are

perceived. The first step

towards the intellectual

interface between

landscape and human

rights is a dynamic and layered understanding of landscape. Accordingly, the 'Right to Landscape' is conceived as the place where the expansive definition of landscape, with its tangible and intangible dimensions, overlaps with the rights that support both life and human dignity, as defined by the UDHR. By expanding on the concept of human rights in the context of landscape this book presents a new model for addressing human rights - alternative scenarios for constructing conflict-reduced approaches to landscape-use and human welfare are generated. This book introduces a rich new discourse on landscape and human rights, serving as a platform to inspire a diversity of ideas and conceptual interpretations. The case studies discussed are wide in their geographical distribution and interdisciplinary in the theoretical situation of their authors, breaking fresh ground for an emerging critical dialogue on the convergence of landscape and human rights.
