Are humans violent or peaceful by nature? We are both. In this ambitious and wide-ranging book, Agner Fog presents a ground-breaking new argument that explains the existence of differently organised societies using evolutionary theory. It combines natural sciences and social sciences in a way that is rarely seen. According to a concept called regality theory, people show a preference for authoritarianism and strong leadership in times of war or collective danger, but desire egalitarian political systems in times of peace and safety. These individual impulses shape the way societies develop and organise themselves, and in this book Agner argues that there is an evolutionary mechanism behind this flexible psychology. Incorporating a wide range of ideas including evolutionary theory, game theory, and ecological theory, Agner analyses the conditions that make us either strident or docile. He tests this theory on data from contemporary and ancient societies, and provides a detailed explanation of the applications of regality theory to issues of war and peace, the rise and fall of empires, the mass media, economic instability, ecological crisis, and much more. *Warlike and Peaceful Societies: The Interaction of Genes and Culture* draws on many different fields of both the social sciences and the natural sciences. It will be of interest to academics and students in these fields, including anthropology, political science, history, conflict and peace research, social psychology, and more, as well as the natural sciences, including human biology, human evolution,

and ecology.

His delight in the subject matter of psychology and in his own readers' curiosity, insights, imagination, and interest is apparent on every page. While Coon reports the latest research, the latest controversies, and the key scientific content important to the course, he does so with a sense of humor and an awareness of readers' learning needs that set his book apart from any other in the field. In a course where professors are frequently confronted by readers who haven't actually read their textbooks, Coon's text offers a solution. Coon effectively presents an approach that involves readers and gets them "hooked" on psychology and eager to read on. Because readers become actively involved with the material, they develop a basic understanding of psychology that they take with them into their future courses and careers. Dennis Coon was the first textbook author to make effective use of cognitive principles to teach psychology by building each chapter around the SQ3R study-reading formula: survey, question, read, recite, and review. Because SQ3R has been a part of the underlying structure of the text from its inception, this proven method works better in Coon's text than in any of the many texts that have emerged over the years that have incorporated the SQ3R structure as an "add-on."
