A New Model for Source Text Analysis

Routledge

Becoming rhetorical is a transformation that allows students to identify rhetorical problems and respond to them with arguments, no matter the course or context from which the problems emerge. In *BECOMING RHETORICAL*, author Jodie Nicotra takes students beyond the view of the rhetorical situation as being composed of communicator, audience, and message, encouraging them also to consider important aspects such as exigence, purpose, and the means of communication. Students learn to analyze and compose in textual, visual, and multimodalities -- from evaluating an op-ed piece, to making a video of a consumer product, to creating an entire public awareness campaign -- thereby becoming confident critical thinkers in a 21st century multimedia world.

Pragmatics of Fiction provides systematic orientation in the emerging field of studying pragmatics with/in fictional data. It provides an authoritative and accessible overview of this versatile new field in its methodological and theoretical richness. Giving center stage to fictional language

allows scholars to review key concepts in sociolinguistics such as genre, style, voice, stance, dialogue, participation structure or features of orality and literariness. The contributors explore language as one of the creative tools to craft story worlds and characters by drawing on concepts such as regional, social and ethnic language variation, as well as multilingualism. Themes such as emotion, taboo language or impoliteness in fiction receive attention just as the challenges of translation and dubbing, the creation of past and future languages, the impact of fictional language on language change or the fuzzy boundaries of narratives. Each contribution, written by a leading specialist, gives a succinct, representative and up-to-date overview of research questions, theories, methods and recent developments in the field.

Musical robotics is a multi- and trans-disciplinary research area involving a wide range of different domains that contribute to its development, including: computer science, multimodal interfaces and processing, artificial intelligence, electronics, robotics, mechatronics and more. A musical robot requires many different complex systems to work together; integrating musical representation, techniques, expressions, detailed analysis and controls, for both playing and listening. The development

of interactive multimodal systems provides advancements which enable enhanced human-machine interaction and novel possibilities for embodied robotic platforms. This volume is focused on this highly exciting interdisciplinary field. This book consists of 14 chapters highlighting different aspects of musical activities and interactions, discussing cutting edge research related to interactive multimodal systems and their integration with robots to further enhance musical understanding, interpretation, performance, education and enjoyment. It is dichotomized into two sections: Section I focuses on understanding elements of musical performance and expression while Section II concentrates on musical robots and automated instruments. *Musical Robots and Interactive Multimodal Systems* provides an introduction and foundation for researchers, students and practitioners to key achievements and current research trends on interactive multimodal systems and musical robotics.

How the Brain Processes Multimodal Technical Instructions Routledge

This preface tells the story of how Multimodal Usability responds to a special challenge. Chapter 1 describes the goals and structure of this book. The idea of describing how to make multimodal computer systems usable arose in the European Network of Excellence SIMILAR - "Taskforce for creating human-machine interfaces SIMILAR to human-human communication", 2003- 2007, www.similar.cc. SIMILAR brought together people from multimodal signal processing and usability with the aim of creating enabling technologies for new kinds of multimodal systems and demonstrating results in research prototypes. Most of

our colleagues in the network were, in fact, busy extracting features and figuring out how to demonstrate progress in working interactive systems, while claiming not to have too much of a notion of usability in system development and evaluation. It was proposed that the authors support the usability of the many multimodal prototypes underway by researching and presenting a methodology for building usable multimodal systems. We accepted the challenge, first and foremost, no doubt, because the formidable team spirit in SIMILAR could make people accept outrageous things. Second, having worked for nearly two decades on making multimodal systems usable, we were curious - curious at the opportunity to try to understand what happens to traditional usability work, that is, work in human-computer interaction centred around traditional graphical user interfaces (GUIs), when systems become as multimodal and as advanced in other ways as those we build in research today.

Multimodal Pragmatics and Translation Routledge

The purpose of this project is to develop an investment analysis model that integrates the capabilities of four types of analysis for use in evaluating interurban transportation system improvements. The project will also explore the use of new data warehousing and mining techniques to design the types of databases required for supporting such a comprehensive transportation model. The project consists of four phases. The first phase, which is documented in this report, involves development of the conceptual foundation for the model. Prior research is reviewed in Chapter 1, which is composed of three major sections

providing demand modeling background information for passenger transportation, transportation of freight (manufactured products and supplies), and transportation of natural resources and agricultural commodities. Material from the literature on geographic information systems makes up Chapter 2. Database models for the national and regional economies and for the transportation and logistics network are conceptualized in Chapter 3. Demand forecasting of transportation service requirements is introduced in Chapter 4, with separate sections for passenger transportation, freight transportation, and transportation of natural resources and commodities. Characteristics and capacities of the different modes, modal choices, and route assignments are discussed in Chapter 5. Chapter 6 concludes with a general discussion of the economic impacts and feedback of multimodal transportation activities and facilities.

MUSICAL ROBOTS AND INTERACTIVE MULTIMODAL SYSTEMS

John Benjamins Publishing Company
Classic pragmatic theories emphasize the linguistic aspect of illocutionary acts and forces. However, as multimodality has gained importance and popularity, multimodal pragmatics has quickly become a frontier of pragmatic studies. This book adds to this new research trend by offering a perspective of situated discourse in the Chinese context. Using the multimodal corpus approach, this study examines how speakers use multiple devices to perform illocutionary acts and express illocutionary forces. Not only does the author use qualitative analysis to study the types, characteristics, and emergence patterns of illocutionary

forces, he also performs a quantitative, corpus-based analysis of the interaction of illocutionary forces, emotions, prosody, and gestures. The results show that illocutionary forces are multimodal in nature while meaning in discourse is created through an interplay of an array of modalities. Students and scholars of pragmatics, corpus linguistics, and Chinese linguistics will benefit from this title.

A Multimodal Approach to Challenging Gender Stereotypes in Children's Picture Books Routledge

Research on social networks has become a significant area of investigation in the social sciences, and social network concepts and tools are widely employed across many subfields within the field. This volume introduces political theorists and researchers to new theoretical, methodological, and substantive tools for extending political network research into new realms and revitalizing established domains. The authors synthesize new understandings of multimodal political networks, consisting of two or more types of social entities - voters, politicians, parties, events, organizations, nations - and the complex relations between them. They discuss ways to theorize about multimodal connections, methods for measuring and analyzing multimodal datasets, and how the results can reveal new insights into political structures and action. Several empirical applications demonstrate in great detail how multimodal analysts can detect and visualize political communities consisting of diverse social entities.

Critical Multimodal Studies of Popular Discourse Routledge

This accessible introduction to multimodality illuminates the potential of multimodal research for understanding

the ways in which people communicate. Readers will become familiar with the key concepts and methods in various domains while learning how to engage critically with the notion of multimodality. The book challenges widely held assumptions about language and presents the practical steps involved in setting up a multimodal study, including: formulating research questions collecting research materials assessing and developing methods of transcription considering the ethical dimensions of multimodal research. A self-study guide is also included, designed as an optional stand-alone resource or as the basis for a short course. With a wide range of examples, clear practical support and a glossary of terms, *Introducing Multimodality* is an ideal reference for undergraduate and postgraduate students in multimodality, semiotics, applied linguistics and media and communication studies. Online materials, including colour images and more links to relevant resources, are available on the companion website at www.routledge.com/cw/jewitt and the Routledge Language and Communication Portal.

MULTIDISCIPLINARY PERSPECTIVES

Routledge
Multimodal Pedagogies in Diverse Classrooms examines how the classroom can become a democratic space founded on the integration of different histories, modes of representation, feelings, languages and discourses, and is essential reading for anyone interested in the connection between multimodality, pedagogy, democracy and social justice in diverse classrooms. Pippa Stein combines theory with material taken from post-apartheid classrooms in South Africa where

students from different language and cultural backgrounds negotiate the ongoing tensions between tradition and modernity, Western and African intellectual thought, as well as the apartheid-past of their parents, and their own aspirations for the future. This insightful book argues that classrooms can become 'transformative' sites in which students can develop curricula and pedagogies which speak to the diversity of global societies, and looks at: How multimodality can be used to promote social justice and democracy in diverse classrooms; The forms of representation through which students make meaning in classrooms; How those forms contribute to the building of democratic cultures; The cultural resources available to students, and how they are used for learning; Difference as a productive energy for learning. Dealing with issues such as democracy, politics of difference, diversity, multicultural and multilingual classrooms, this book is as pertinent to readers across the globe as it is to those in South Africa, and will be invaluable and fascinating reading for anyone working or interested in this field.

THE CONCEPTUAL MODEL

Routledge
 Since the turn of the millennium, there has seen an increase in the inclusion of typography, graphics and illustration in fiction. This book engages with visual and multimodal devices in twenty-first century literature, exploring canonical authors like Mark Z. Danielewski and Jonathan Safran Foer alongside experimental fringe writers such as Steve Tomasula, to uncover an embodied textual aesthetics in the information age. Bringing together multimodality and cognition in an

innovative study of how readers engage with challenging literature, this book makes a significant contribution to the debates surrounding multimodal design and multimodal reading. Drawing on cognitive linguistics, cognitive psychology, neuroscience, semiotics, visual perception, visual communication, and multimodal analysis, Gibbons provides a sophisticated set of critical tools for analysing the cognitive impact of multimodal literature.

Walter de Gruyter GmbH & Co KG English for Law (also called Legal English Teaching) is a big challenge for EFL/ESL teachers worldwide. Multimodal teaching and learning may engage law students with legal content and the English language by using multiple communication modes and mediums. But what are the multi-modes and multi-mediums specific to the ESP (English for Specific Purposes) course? How would teachers deal with that complicated multimodal information? How would teachers intrigue students' interest, focus their attention, and guide them to follow, respond, analyze, extend, and comment? And how would teachers build students' critical thinking skills and shape international elites' dispositions? This book would discuss more in-depth the above questions. The new analysis framework of MDIP (Multimodal Discourse Information Processing) could decode classroom participants' interactive intentions from their multimodal presentation discourses, could focus LCTA (Legal Critical Thinking Abilities) as the primary training purpose of Legal English Teaching, and could provide Legal English Teaching with discursive, cognitive, and communicative information strategies.

With the help of MDIP strategies, teachers are clearer at how to extract the legal documents' genres, how to create the lecture schemata, how to generate visualized tree discourses, how to build hierarchies among multimodal information, how to allocate teaching, learning, and assessing tasks in classroom instruction, etc. As a result, Legal English Teaching's course design will become much less challenging for EFL/ESL teachers.

Multimodal Political Networks

Bloomsbury Publishing

Studies of multimodality have significantly advanced our understanding of the potential of different semiotic resources—verbal, visual, aural, and kinetic—to make meaning and allow people to achieve various social purposes such as persuading, entertaining, and explaining. Yet little is known about the role that individual nonverbal resources and their interaction with language and with each other play in concealing and supporting, or drawing attention to and subverting, social boundaries and inequality, political or commercial agendas. This volume brings together contributions by prominent and emerging scholars that address this gap through the critical analysis of multimodality in popular culture texts and semiotic practices. It connects multimodal analysis to critical discourse analysis, demonstrating the value of different approaches to multimodality for building a better understanding of critical issues of central interest to discourse analysis, semiotics, applied linguistics, education, cultural and media studies.

INTRODUCING MULTIMODALITY

Springer Science & Business Media

Over the last two decades, the study of

discourse in film and television has become one of the most promising research avenues in stylistics and pragmatics due to the dazzling variety of source material and the huge pragmatic range within it. Meanwhile, with the advent of streaming and the box set, film and television themselves are becoming separated by an increasingly blurred line. This volume closes a long-standing gap in stylistics research, bringing together a book-level pragmastylistic showcase. It presents current developments from the field from two complementary perspectives, looking stylistically at the discourse in film and the discourse of and around film. This latter phrase comes to mean the approaches which try to account for the pragmatic effects induced by cinematography. This might be the camera work or the lighting, or the *mise en scène* or montage. The volume takes a multimodal approach, looking at word, movement and gesture, in keeping with modern stylistics. The volume shows how pragmatic themes and methods are adapted and applied to films, including speech acts, (im)politeness, implicature and context. In this way, it provides systematic insights into how meanings are displayed, enhanced, suppressed and negotiated in both film and televisual arts.

A Multimodal Study of Sarcasm in Interactional Humor Anchor Academic Publishing (aap_verlag)

This volume meditates on the various meanings of legitimation and expands on the notion that language can be used to gain or preserve it by demonstrating the added impact of other modes in specific examples of political and institutional discourse. The book draws on a multilayered framework that builds on and integrates work from both critical

discourse analysis and social semiotic traditions, as well as the work of philosophers such as Habermas, Weber, and Rousseau, to show how it might be applied in practice to analyse and understand myriad forms of discourse. The volume focuses on examples from political campaign spots, which highlight various modes, including images, film, oratory, and color, but are also of global relevance and scale, highlighting their unique and complex position at the nexus between legitimation and multimodality. Offering a new analytical framework for understanding legitimation across a range of discursive contexts, this book will be of particular interest to students and scholars in discourse analysis, multimodality, political science, psychology, design, and education.

MULTIMODAL ANALYSIS OF USER-GENERATED MULTIMEDIA CONTENT

Multimodal Behavioral Analysis in the Wild: Advances and Challenges presents the state-of-the-art in behavioral signal processing using different data modalities, with a special focus on identifying the strengths and limitations of current technologies. The book focuses on audio and video modalities, while also emphasizing emerging modalities, such as accelerometer or proximity data. It covers tasks at different levels of complexity, from low level (speaker detection, sensorimotor links, source separation), through middle level (conversational group detection, addresser and addressee identification), and high level (personality and emotion recognition), providing insights on how to exploit inter-level and intra-level links. This is a valuable resource on the state-of-the-art and future research

challenges of multi-modal behavioral analysis in the wild. It is suitable for researchers and graduate students in the fields of computer vision, audio processing, pattern recognition, machine learning and social signal processing. Gives a comprehensive collection of information on the state-of-the-art, limitations, and challenges associated with extracting behavioral cues from real-world scenarios Presents numerous applications on how different behavioral cues have been successfully extracted from different data sources Provides a wide variety of methodologies used to extract behavioral cues from multi-modal data

MULTIMODALITY, COGNITION, AND EXPERIMENTAL LITERATURE

Frank & Timme GmbH

This volume is the first monograph exploring the functions of visual cues in humor, advocating for the development of a non-linguocentric theory of humor performance. It analyzes a corpus of dyadic, face-to-face interactions in Spanish and English to study the relationship between humor, smiling, and gaze, and shows how, by focusing on these elements, it is possible to shed light on the “unsaid” of conversations. In the book, the humorous framing of an utterance is shown to be negotiated and co-constructed dialogically and multimodally, through changes and patterns of smiling synchronicity, smiling intensity, and eye movements. The study also analyzes the multimodal features of failed humor and proposes a new categorization from a dialogic perspective. Because of its interdisciplinary approach, which includes facial expression analysis and eye tracking, this book is relevant to humor researchers as well as scholars in

social and behavioral sciences interested in multimodality and embodied cognition.

Multimodal Processing and Interaction
A&C Black

This book presents a summary of the multimodal analysis of user-generated multimedia content (UGC). Several multimedia systems and their proposed frameworks are also discussed. First, improved tag recommendation and ranking systems for social media photos, leveraging both content and contextual information, are presented. Next, we discuss the challenges in determining semantics and sentics information from UGC to obtain multimedia summaries. Subsequently, we present a personalized music video generation system for outdoor user-generated videos. Finally, we discuss approaches for multimodal lecture video segmentation techniques. This book also explores the extension of these multimedia system with the use of heterogeneous continuous streams.

Multimodal Biometrics and Intelligent Image Processing for Security Systems Cambridge University Press

This book proposes a new model for the translation-oriented analysis of multimodal source texts. The author guides the reader through semiotics, multimodality, pragmatics and translation studies on a quest for the meaning-making mechanics of texts that combine images and words. She openly challenges the traditional view that sees translators focusing their attention mostly on the linguistic aspect of source material in their work. The central theoretical pivot around which the analytical model revolves is that multimodal texts communicate through individual images and linguistic units, as well as through the interaction among

textual resources and the text's interaction with its context of reference. This three-dimensional view offers a holistic understanding of multimodal texts and their potential translation issues to help translators improve the way they communicate multimodally across languages and cultures. This book will appeal to researchers in the fields of translation studies, multimodality and pragmatics.

Routledge

In this wide-ranging collection, leading scholars, researchers, and emergent researchers from around the world come together and present examples of multimodal discourse analysis in practice. The book illustrates new theoretical, methodological and empirical research into new technologies such as the internet, software, CD-ROM, video, and older technologies such as film, newspapers, brands or billboards. Each chapter demonstrates how aspects of multimodal theory and method can be used to conduct research into these and other multimodal texts. Taken together, the book advances the field of multimodal discourse analysis and offers a range of current studies that address some of the most important questions facing researchers and students when investigating new or old technologies multimodally in linguistics, education, communication studies, sociology,

anthropology and other fields.

Towards an Integrated Framework

Springer

This volume develops a new multimodal semiotic approach to the study of communication, examining how multimodal discourse is construed transmedially and interculturally and how new technologies and cultural stances inform communicative contexts across the world. It contributes to current theoretical debates in the disciplines of semiotics, linguistics, multimodality, and pragmatics, as well as those aspects of pedagogy and film studies that engage with the notions of text and narrative by addressing questions such as: How do we study multimedia communication? How do we incorporate the impact of new media technologies into the study of Linguistics and Semiotics? How do we construe culture in modern communication? How useful are the current multidisciplinary approaches to multimodal communication? Through the analysis of specific case studies that are developed within diverse academic disciplines and which draw on a range of theoretical frameworks, the goal of this book is to provide a basis for an overarching framework that can be applied by scholars and students with different academic and cultural backgrounds.
