Who wouldn't benefit from knowing what their test is going to look like? Being prepared with Fundamentals Success meant I hit the

ground running. I aced my first test when most of my classmates were facing their first ever-academic failures.

Nursing school is nothing like anything I have ever done before, memorizing text books will do little to prepare you to be a critical thinker. To succeed you must be able to apply the knowledge in multi-step process...the nursing process! The FA Davis books take you there and they do it quickly, because we nursing students needed to know it yesterday!”

This US resource addresses some of the issues in teaching and evaluating thinking skills. It is aimed at staff developers, teacher educators, teachers and curriculum developers. It is intended

that the resource be used by teaching staff to answer the following questions: \* how can I tell how well learners are thinking critically? \* how can I tell if my thinking skills curriculum is having an impact on my learners? This is 1 in a series of resources on the practical aspects of integrating thinking skills into teaching. Table of contents: \* What is critical thinking? (example of thinking, a definition of critical thinking, our definition of critical thinking - an appraisal) \* Gathering quality information on students' critical thinking (types of information gathering techniques, comprehensiveness of critical thinking coverage, indicators of quality) \* Commercially available critical thinking tests (guidelines for examining tests, comprehensive critical thinking

tests, aspect-specific critical thinking tests) \* Making your own multiple-choice critical thinking tests (identifying the purpose of the test, making a table of specifications, drafting tests components) \* Making your own open-ended information gathering techniques \* Making decisions from information gathered on students' critical thinking (placement, grading, diagnosis and remediation. Decisions about effectiveness, developmental uses) \* Summary and concluding remarks for each chapter.

## **BUILDING THINKING SKILLS**

Rowman & Littlefield

In the wake of initiatives such as No Child Left Behind and the use of high-stakes testing, the emphasis in schools

has been on drill and practice for the test. Genuine understanding and critical thinking have been increasingly shortchanged. As a result, students have fewer opportunities to advance their insight into cognitive and emotional challenges, even though both teachers and parents recognize the importance of developing deliberative and reflective thinking skills. This book uniquely combines two things. First, it provides resources for classroom teachers in grades 3 – 6 that make it possible for them, at a moment's notice, to take advantage of a teachable moment by drawing students into productive intellectual discussions. Second, it gives the reader an overview of the rationale and the research base for engaging students in educational activities that

are truly intellectual and that are not limited to training for testing success. *Critical Thinking Level II* Princeton Review
