Malts and Malting | D.E.
Briggs | Springer Malts
And Malting Malt is
germinated cereal
grain that has been
dried in a process
known as
"malting". The grain is
made to germinate by
soaking in water and is
then halted from

germinating further by
drying with hot air..
Malting grain develops
the enzymes (α -
amylase, β -amylase)
required for modifying
the grains' starches
into various types of
sugar, including
monosaccharide
glucose, disaccharide
maltose ... Malt -
Wikipedia Malting is a
process of steeping,
germinating and drying

grain to convert it into malt. The malt is mainly used for brewing or whisky making, but can also be used to make malt vinegar or malt extract. Various grains are used for malting; the most common are barley, sorghum, wheat and rye. There are a number of different types of equipment that can be used to produce the malt. Malting - Wikipedia This book gives a comprehensive overview of malts and malt competitors, how they are made and evaluated. Summary- outlines of the malting process and malt-using processes are followed by consideration of the structures, germinative physiology and biochemistry of cereal grains. Particular attention is paid to barley, but the malting

of other cereal is described. Malts and Malting - D.E. Briggs - Google Books The principles of malt evaluation are explained, and the effect of altering malting conditions summarized. This book should be of direct value to maltsters, brewers, distillers, foodstuff manufacturers and other malt users as well as being of more general interest to food scientists and technologists in academic research institutions. Malts and Malting: Briggs, D.E.: 9780412298004: Amazon.com ... Malt definition is - grain (such as barley) softened by steeping in water, allowed to germinate, and used especially in brewing and distilling. Malt |
