Forensic image processing
(FIP) involves computer
restoration and
enhancement of
surveillance imagery. The
goal of FIP is to maximize
information extraction
from surveillance
imagery, especially
imagery that is noisy,

incomplete, or over/under
exposed. With digital
filtering, image
restoration, de-noising,
and enhancement
techniques, information
can be extracted from
low-quality imagery. Using
step-by-step examples,
this unique resource
describes, in detail, how
to master the latest FIP
technologies. Forensic

This book comprehensively reviews bonding to enamel, dentin and cementum and analyses relevant adhesion mechanisms. It is addressed to both the dental researcher and the clinician. Emphasis is placed on the characterization of material interfaces with dental tissues in situ. The volume also stresses the importance of appropriate experimental protocol design in facilitating clinically-relevant research methods, clarifies the mechanisms of adhesion of polymeric materials to hard dental tissues and furnishes a handy reference for routine clinical procedures in restorative and prosthetic dentistry as well as orthodontics. The book introduces important aspects of the chemistry of dental materials and their adaptation to dental hard tissues. It also analyses interfacial phenomena occurring

during application of materials, including mechanical properties, and structural-compositional alterations. The text presents the current instrumental approaches in studying related issues and a summary of the current status of theories concerning bonding to dental tissues. This work, in its scope and scientific content, provides an in-depth view of the way in which aesthetic dentistry is currently being practiced.

The Rothschilds of the New World Newnes

This book discusses recent advances in computer and computational sciences from upcoming researchers and leading academics around the globe. It presents high-quality, peer-reviewed papers presented at the International Conference on Computer, Communication and Computational Sciences (IC4S 2019), which was held on 11–12 October 2019 in Bangkok. Covering a broad range of topics, including intelligent hardware and software design, advanced communications, intelligent computing techniques, intelligent

image processing, the Web and informatics, it offers readers from the computer industry and academia key insights into how the advances in next-generation computer and communication technologies can be shaped into real-life applications.

A Critical Social Work Approach Springer Nature

This is a core text for courses in social problems. Using a strong Canadian perspective, it examines the social dynamics and consequences of social problems (such as unemployment, poverty, global inequality) through the lens of the main sociological paradigms. It takes a broad approach and examines the social construction of social problems and the impact of social problems on individual and societal health. Possible solutions for individuals and society at large are examined. [IC4S 2020](#) Hal Leonard Corporation

A new edition, packed with even more clever tricks and methods that make everyday life easier. Lifehackers redefine personal productivity with creative and clever methods for making life easier and more enjoyable. This new

edition of a perennial bestseller boasts new and exciting tips, tricks, and methods that strike a perfect balance between current technology and common sense solutions for getting things done. Exploring the many ways technology has changed since the previous edition, this new edition has been updated to reflect the latest and greatest in technological and personal productivity. The new "hacks" run the gamut of working with the latest Windows and Mac operating systems for both Windows and Apple, getting more done with smartphones and their operating systems, and dealing with the evolution of the web. Even the most tried-and-true hacks have been updated to reflect the contemporary tech world and the tools it provides us. Technology is supposed to make our lives easier by helping us work more efficiently. *Lifehacker: The Guide to Working Smarter, Faster, and Better, Third Edition* is your guide to making that happen!

What is virtue? What is moderation? What is justice? What is courage? What is good? What is piety? Socrates thought that

understanding the perspectives of others on these six great questions would help him become a more excellent human being. Following in Socrates's footsteps, Christopher Phillips—"Johnny Appleseed with a master's degree" (Utne Reader)—investigates these same questions, beginning in the marketplace of modern-day Athens. He goes on to investigate the timely responses and outlooks of people from different cultures and backgrounds around the world: from Greece and Spain to Japan and Korea, Mexico City, and Chiapas, where the region's indigenous people struggle for fundamental human rights. Phillips also traveled throughout the United States, holding dialogues in diverse communities from New York City to the Navajo Nation. Introducing us to less familiar thinkers in non-Western traditions who were kindred spirits of Socrates, Phillips enlarges our perspectives on life's fundamental questions, creating an innovative world survey of philosophy.

This monograph presents
a short course in
computational geometry
and topology. In the first
part the book covers
Voronoi diagrams and
Delaunay triangulations,
then it presents the
theory of alpha complexes

which play a crucial role
in biology. The central
part of the book is the
homology theory and their
computation, including
the theory of persistence
which is indispensable for
applications, e.g. shape
