*Post-Hindu India* Morgan & Claypool Publishers  
This open access book is a consolidation of lessons learnt and experiences gathered from our efforts to utilise Earth observation (EO) science and applications to address environmental challenges in the Hindu Kush Himalayan region. It includes a complete package of knowledge on service life cycles including multi-disciplinary topics and practically tested applications for the HKH. It comprises 19 chapters drawing from a decade's worth of experience gleaned over the course of our implementation of SERVIR-HKH - a joint initiative of NASA, USAID,

and ICIMOD - to build capacity on using EO and geospatial technology for effective decision making in the region. The book highlights SERVIR's approaches to the design and delivery of information services - in agriculture and food security; land cover and land use change, and ecosystems; water resources and hydro-climatic disasters; and weather and climate services. It also touches upon multidisciplinary topics such as service planning; gender integration; user engagement; capacity building; communication; and monitoring, evaluation, and learning. We hope that this book will be a good reference document for professionals and practitioners working in remote sensing, geographic information

systems, regional and spatial sciences, climate change, ecosystems, and environmental analysis. Furthermore, we are hopeful that policymakers, academics, and other informed audiences working in sustainable development and evaluation - beyond the wider SERVIR network and well as within it - will greatly benefit from what we share here on our applications, case studies, and documentation across cross-cutting topics.

### **THE HINDU SPEAKS ON SCIENTIFIC FACTS**

Penguin Random House  
India Private Limited  
Reproduction of the original: *The Hindu-Yogi Science of Breath* by Yogi Ramacharaka  
*The Hindu Speaks on Scientific Facts Vol-II*. The Bhaktivedanta Book Trust  
This book provides an in-depth ethnographic study

of science and religion in the context of South Asia, giving voice to Indian scientists and shedding valuable light on their engagement with religion. Drawing on biographical, autobiographical, historical, and ethnographic material, the volume focuses on scientists' religious life and practices, and the variety of ways in which they express them. Renny Thomas challenges the idea that science and religion in India are naturally connected and argues that the discussion has to go beyond binary models of 'conflict' and 'complementarity'. By complicating the understanding of science and religion in India, the book engages with new ways of looking at these categories.

*The Hindu Yogi Science of Breath* Disha Publications  
The Hindu Elephant god Ganesha is perhaps the most widely popular of ancient deities, and so was the focus of many popular myths. However, his very interesting symbolism is also pivotal to ancient concepts of creation in India. While evidence for Ganesha dates back only to the late centuries BCE in India, comparative studies tie him to ancient African

and Egyptian concepts that originated thousands of years earlier. These references provide us with a sensible context for Ganesha's symbolism, described in distinctly scientific terms. These link his various incarnations, attributes and icons to root dynamics of energy - the very ones that modern-day science tells us lie at the heart of concepts of material creation. Those dynamics, along with important clues uncovered in ancient language and myth, make it possible to reformulate a sensible myth of origin for Ganesha, in much the same form that it may have originally taken.

A complete introduction to Sanatana Dharma, the spiritual science of the Hindu sages • Examines how many core concepts of Hinduism, including Brahman, Atman, bhakti, karma, and reincarnation, relate to modern science • Explores the scientific discoveries of the rishis, ancient Vedic sages, and how they have only recently been rediscovered by Western scientists • Reveals the concepts of quantum physics hidden within the Vedas, the Bhagavad Gita, the Upanishads, and the Puranas Called "the scientists of Hinduism," the rishis of ancient India were the scribes of the Vedas. They developed the spiritual science of Hinduism, Sanatana Dharma, as their way of ensuring the constant renewal and progress of India's spiritual tradition and culture. Sanatana Dharma permeates every aspect of Hindu culture, from religion to the arts to the sciences. Woven within its Vedic texts lie all of the essential concepts of quantum physics and other modern scientific discoveries. Providing a complete

introduction to the science of Sanatana Dharma, Vanamali reveals how the core concepts of Hinduism, including Brahman, Atman, bhakti, karma, and reincarnation, relate to modern science and how the scientific discoveries of the ancient rishis have been recently rediscovered by the West. She examines the scientific principles within the classic stories and texts of India, including the Vedas, the Bhagavad Gita, the Upanishads, and the Puranas. Within the teachings of the ancient Puranic sages and saints such as Valmiki and Vyasa and legendary physicians and mathematician-philosophers such as Aryabhatta and Varahamihir, the author reveals great scientific truths--not those believed by the ancient world, but truths still upheld by modern science, particularly quantum physics. She explores Desha and Kaala (Space and Time), Shankara and his philosophy of Advaita Vedanta, and the Hindu sciences of mathematics, astronomy, and Vedic astrology. In illustrating the scientific basis of Hinduism and the discoveries of its sages, Vanamali provides a window into the depths of

this most ancient spiritual way of life.

Ganesh Routledge  
This collection of articles by Srila Prabhupada from Back to Godhead magazine covers knowledge of the soul and the practice of bhakti-yoga. These interviews, lectures, and essays cover topics such as the goal of human life, seeking a true spiritual teacher, reincarnation, super-consciousness, Krishna and Christ, and spiritual solutions to today's social and economic problems. SAGE Publishing India  
"Subramaniam examines how science and religion have come together to propel a vision of the modern Indian nation, and in particular, a Hindu nationalist vision of India. Five illustrative cases of bionationalism animate this book: Hindu nationalist narratives of scientific development, colonial law and sexual politics in India, surrogacy and women's roles, the politics of caste and race in the language of genes and genomics, and the alignment of environmental scientists and religious activists. Subramaniam demonstrates that the politics of gender, race, class, caste, sexuality, and indigeneity are

deeply implicated in the projects and narratives of the nation. At the same time, she seeks spaces of possibility and new narratives for planetary salvation that defy binary logics, incorporating science and religion, human and nonhuman, and nature and culture"--

### **HINDU BOOK OF ASTROLOGY**

AuthorHouse  
The leading voices in science studies have argued that modern science reflects dominant social interests of Western society. Following this logic, postmodern scholars have urged postcolonial societies to develop their own "alternative sciences" as a step towards "mental decolonization". These ideas have found a warm welcome among Hindu nationalists who came to power in India in the early 1990s. In this passionate and highly original study, Indian-born author Meera Nanda reveals how these well-meaning but ultimately misguided ideas are enabling Hindu ideologues to propagate religious myths in the guise of science and secularism. At the heart of Hindu supremacist ideology, Nanda argues, lies a postmodernist

assumption: that each society has its own norms of reasonableness, logic, rules of evidence, and conception of truth, and that there is no non-arbitrary, culture-independent way to choose among these alternatives. What is being celebrated as "difference" by postmodernists, however, has more often than not been the source of mental bondage and authoritarianism in non-Western cultures. The "Vedic sciences" currently endorsed in Indian schools, colleges, and the mass media promotes the same elements of orthodox Hinduism that have for centuries deprived the vast majority of Indian people of their full humanity. By denouncing science and secularization, the left was unwittingly contributing to what Nanda calls "reactionary modernism." In contrast, Nanda points to the Dalit, or untouchable, movement as a true example of an "alternative science" that has embraced reason and modern science to challenge traditional notions of hierarchy.

The Hindu Speaks on Information Technology Seagull Books Pvt Ltd  
Kancha Ilaiah, the author of the best selling book *Why I am Not a Hindu*, pens a thought-provoking critique of Brahmanism and the caste system in India, while anticipating the death of Hinduism as a direct consequence of, what he says is, its anti-scientific and anti-nationalistic stand. This work challenges Hinduism's interpretation of history, with a virulent attack on caste politics, and also takes a refreshing look at the necessity of encouraging indigenous scientific thought for the sake of national progress. It establishes Hinduism as a 'backward' religion that suppresses the latent scientific and productive potential of the Dalit-Bahujan communities. The author says this oppressive

system of spiritual fascism is detrimental to both the future of religion and the nation-state. He thus criticizes the idea of spiritual justice or varnadharma, used to justify the caste system, as rooted in spiritual inequality. On a micro-analytical level, it is based on a thorough study of the productive knowledge systems of the Dalit-Bahujan communities of Andhra Pradesh, and provides a detailed day-to-day analysis of the scientific technological processes and events at work in the life of a member of these communities. On a macro level, it shows how Hinduism fails to negotiate between faith and reason, unlike other major religions of the world. Kancha Ilaiah critiques the intellectual imagination of the dominant communities and inspires the marginalized. In the process of doing so he crafts a work of immense socio-political interest which appeals to academics, and also to all those who are concerned about contemporary India's polity and social fabric.

**Earth Observation Science and Applications for Risk**

## **Reduction and Enhanced Resilience in Hindu Kush Himalaya Region**

Rutgers University Press

In this chapter we will give you briefly the theories of the Western scientific world regarding the functions of the respiratory organs, and the part in the human economy played by the breath. In subsequent chapters we will give the additional theories and ascertained facts of the Oriental school of thought and research. The Oriental accepts the theories and facts of his Western brothers (which have been known to him for centuries) and adds thereto much that the latter do not now accept, but which they will in due time "discover" and which, after renaming, they will present to the world as a great truth.

### **The Hindu Science of Marriage** Springer Nature

To understand modern science as a coherent story, we must recognize the achievements of the ancient Hindus and this book tells their stories through painstaking research of historical and scientific sources. The ancient Hindus invented

our base-ten number system and zero that are now used globally, carefully mapped the sky and assigned motion to the Earth in their astronomy, developed a sophisticated system of medicine with its mind-body approach known as Ayurveda, mastered metallurgical methods of extraction and purification of metals, including the so-called Damascus blade and the Iron Pillar of New Delhi, and developed the science of self-improvement that is popularly known as yoga. Their scientific contributions impacted noted scholars globally: Aristotle, Megasthenes, and Apollonius of Tyana among the Greeks; Al-Biruni, Al-Khwarizmi, Ibn Labban, and Al-Uqlidisi, Al-Jahiz among the Islamic scholars; Fa-Hien, Hiuen Tsang, and I-tsing among the Chinese; and Leonardo Fibbonacci, Pope Sylvester II, Roger Bacon, Voltaire and Copernicus from Europe. In the modern era, thinkers and scientists as diverse as Ralph Waldo Emerson, Johann Wolfgang von Goethe, Johann Gottfried Herder, Carl Jung, Max Mueller, Robert Oppenheimer, Erwin Schroedinger, Arthur Schopenhauer, and

Henry David Thoreau have acknowledged their debt to ancient Hindu achievements in science, technology, and philosophy. The American Association for the Advancement of Science (AAAS), one of the largest scientific organizations in the world, in 2000, published a timeline of 100 most important scientific findings in history to celebrate the new millennium. There were only two mentions from the non-Western world: (1) invention of zero and (2) the Hindu and Mayan skywatchers astronomical observations for agricultural and religious purposes. Both findings involved the works of the ancient Hindus. Ancient Hindu Science is well documented with remarkable objectivity, proper citations, and a substantial bibliography. The style of writing is lucid and elegant, making the book easy to read. This book is the perfect text for all students and others interested in the developments of science throughout history and among the ancient Hindus, in particular.

**Yoga and the Hindu Tradition** MDPI  
Originally published in 1977, The Hindu Religious

Tradition provides a detailed exploration into the different doctrines regarding the nature of Religious Reality and the many paths of search for this Reality within the Hindu religion. The book discusses these differing doctrines from the point of view of their philosophical significance and their use in man's search for the divine in consideration of the traditional teaching that the divine is already in man and can be realised in direct experience. It provides a comprehensive account of this tradition through considering all aspects that are integral to it, and highlights that the profundity of this tradition lies in that it cannot be limited to the requirements of any one form of conceiving the divine. The Hindu Religious Tradition will appeal to those with an interest in Hinduism, religious philosophy, and theology.

"Indian nationalists have a great project in hand. Their work-in-progress is the recovery of India's proud past and it's rightful place at the centre of human civilization. In pursuit of this, history must be rewritten regardless of the facts and they will make sure the world acknowledges India's pre-eminence by direct action at home and abroad." "Claiming to take a leaf out of the Islamic book, they are no longer prepared to suffer insult, denigration or offence, past and present, in silence. And offence is found everywhere - in art galleries, schools and universities, books, films, music and online. Hindu nationalists have targeted all these, attacking art galleries and driving artists into exile, tearing down posters they consider obscene, demanding bans on books that don't conform to their version of history, vandalizing research institutes and threatening its academics, forcing film studios to change scripts or musicians to alter lyrics, destroying mosques and abusing Muslims. In the process, they have plunged India into chaos and alienated many sectors of this

multicultural society. Most seriously, they threaten the secular India of its founding fathers." --Book Jacket.

*(Free Sample) 27 Years UPSC IAS/IPS Prelims Topic-wise Solved Papers 1 & 2 (1995 - 2021) 12th Edition* Disha Publications  
This open access volume is the first comprehensive assessment of the Hindu Kush Himalaya (HKH) region. It comprises important scientific research on the social, economic, and environmental pillars of sustainable mountain development and will serve as a basis for evidence-based decision-making to safeguard the environment and advance people's well-being. The compiled content is based on the collective knowledge of over 300 leading researchers, experts and policymakers, brought together by the Hindu Kush Himalayan Monitoring and Assessment Programme (HIMAP) under the coordination of the International Centre for Integrated Mountain Development (ICIMOD). This assessment was conducted between 2013 and 2017 as the first of a series of monitoring and assessment reports, under the guidance of the

HIMAP Steering Committee: Eklabya Sharma (ICIMOD), Atiq Raman (Bangladesh), Yuba Raj Khatiwada (Nepal), Linxiu Zhang (China), Surendra Pratap Singh (India), Tandong Yao (China) and David Molden (ICIMOD and Chair of the HIMAP SC). This First HKH Assessment Report consists of 16 chapters, which comprehensively assess the current state of knowledge of the HKH region, increase the understanding of various drivers of change and their impacts, address critical data gaps and develop a set of evidence-based and actionable policy solutions and recommendations. These are linked to nine mountain priorities for the mountains and people of the HKH consistent with the Sustainable Development Goals. This book is a must-read for policy makers, academics and students interested in this important region and an essentially important resource for contributors to global assessments such as the IPCC reports.

### **PERSPECTIVES ON REINCARNATION: HINDU, CHRISTIAN,**

### **AND SCIENTIFIC**

Ssoft Group, INDIA  
This book traces the history of Judaism back to its roots in India. Blamed by the nomadic Aryans (Devas and Christyanis) for two floods that destroyed the Indus Civilization. The Yadava (Yahu-Deva) city dwellers, artisans, and farmers fled India for the Middle East and other parts of the world, taking with them and propagating their religion of Yishvara in their new homes. In the Middle East this Yishvara religion later became Judaism. The book gives many examples of the thousands of Hindu place names in various parts of the world and how Sanskrit influenced English. The author describes how the true meanings of the religious words of Yishvara, such as Prayer (Pray), Faith (Phath), Reverence (Ravara), Idolatry (Adaultar), etc., have changed so drastically that no one even knows what Religion is any more or what to do with it. Because of the computer age and other scientific innovations, Yishvara, the ancestor of Judaism, has a powerful message to deliver to this millennium. When the reader finishes this book,

he'll know more about religion than the Pope and the Dalai Lama.
