THE RISE OF THE EDUCATIONAL SECURITY STATE

Routledge

In his latest book, Joel Spring covers major political, economic and social issues affecting US and global education policy today.

Crafted to evoke classroom discussion, this book explores contemporary issues such as the pandemic, institutional racism, religious controversies, nationalism and immigration, increased reliance on online instruction, climate change, economics of education and the deep state in education. Giving students the opportunity to engage in critical thinking and explore the growing sense that US and global education is in distress and in need of fundamental transformation, this book forces readers to examine their own values and how they might apply this thinking to their

own education policy and practice.

THE DYNAMICS OF OPPORTUNITY IN AMERICA

Springer

Continuing Joel Spring's reportage and analysis of the intersection of global forces and education, this text offers a comprehensive overview and synthesis of current research, theories, and models related to the topic. Spring introduces readers to the processes, institutions, and forces by which schooling has been globalized

and examines the impact of these forces on schooling in local contexts. Designed for courses on globalization and education, international and comparative education, educational foundations, multicultural education, and educational policy, the text is written in a clear narrative style to engage readers in thoughtful consideration of topics discussed. Each chapter includes "Key Points" that summarize the content and suggest issues and questions for critical analysis, discussion, and debate. *American Education* Addison-Wesley Longman Limited Providing a critical understanding of the political and social forces shaping educational politics in the United States, this concise text describes and analyzes how policy is made for American schools and its effect on all of our lives and thinking. Joel Spring argues that the politics of Education is driven by a complex interrelationship between politicians, private foundations and think tanks, teachers' unions, special-interest groups, educational politicians, school administrators, boards of education, courts, and the knowledge industry. The text uses many current examples to illustrate conflicts over educational policies.

Routledge

This book offers a unique picture of education and training in the EU between the early 1980s and the late 1990s. It synthesizes a wealth of research, policy documents and original data from the fifteen Member States and from the European Commission. The advent of the Single Market and of the euro have focused attention on economic integration in Europe; while discussions of globalization also emphasize common trends and economic convergence. *Convergence and Divergence in European Education and Training Systems* demonstrates that, while European education and training systems are responding to powerful general trends, they remain highly distinctive, with no obvious movement towards a single common pattern.

MULTICULTURAL EDUCATION IN THE UNITED STATES AND THE GLOBAL ECONOMY

Routledge

In this book Joel Spring explores three major international educational ideologies that are shaping global society: neo-liberal educational ideology, human rights education, and environmentalism. Neo-liberal ideology reflects a rethinking of

nationalist forms of education as the nation-state slowly erodes under the power of a growing global civil society. Traditional nationalist education attempts to mold loyal and patriotic citizens who are emotionally attached to symbols of the state, whereas the goal of neo-liberal educational ideology is to change nationalist education to serve the needs of the global economy. These changes are fueling a clash between the ideas of free-market and consumer-based neo-liberals and those of human rights and environmental educators. Human rights education is concerned with creating activist global citizens. It is rooted in the idea that inherent in human rights doctrines is a collective responsibility to ensure the rights of all people. Environmentalism is the most radical of the ideologies because it rejects the industrial and consumerist paradigm that has dominated most economic thought, including capitalism and communism. Spring synthesizes and analyzes the effect of these educational ideologies on shaping the future of the global society. In the concluding section, he compares the effect of these ideologies on global society with the possibility of a world divided between conflicting civilizations. *How Educational Ideologies Are Shaping Global Society: Intergovernmental Organizations, NGOs, and the Decline of the Nation-State* features: *a critical exploration of the transition of schooling from a function of the nation-state to a globalized economic and political system; *a discussion of the major organizations and trading blocs shaping the future globalization of educational policies; *an analysis of the major competing global ideologies of education--including national and corporate models that emphasize training workers for a competitive global free market; the worldwide network of human rights and peace educators who are teaching a global set of ethics; and the environmental movement's efforts to create a common set of educational standards for sustainable development and sustainable consumption; and *an exploration of the possible future of global educational policy and school organizations. By integrating a wide range of previously scattered information within a bold new framework for understanding educational ideologies and their impact on the global society, Spring raises important questions for researchers, professionals, and students in history and philosophy of education, educational policy, educational studies, comparative education, multicultural education, curriculum studies, critical media studies, global

studies, human rights education, and related areas.

Ethnography of a Neoliberal School Routledge

This current, comprehensive history of American education is designed to stimulate critical analysis and critical thinking by offering alternative interpretations of each historical period. The new edition focuses on the process of educational globalization and the development of American schools in a global context.

MATHEMATICS EDUCATION

Routledge

From one of the foremost authorities on education in the United States, former U.S. assistant secretary of education, "whistle-blower extraordinaire" (The Wall Street Journal), author of the best-selling *The Death and Life of the Great American School System* ("Important and riveting"—Library Journal), *The Language Police* ("Impassioned . . . Fiercely argued . . . Every bit as alarming as it is illuminating"—The New York Times), and other notable books on education history and policy—an incisive, comprehensive look at today's American school system that argues against those who claim it is broken and beyond repair; an impassioned but reasoned call to stop the privatization movement that is draining students and funding from our public schools. In *Reign of Error*, Diane Ravitch argues that the crisis in American education is not a crisis of academic achievement but a concerted effort to destroy public schools in this country. She makes clear that, contrary to the claims being made, public school test scores and graduation rates are the highest they've ever been, and dropout rates are at their lowest point. She argues that federal programs such as George W. Bush's No Child Left Behind and Barack Obama's Race to the Top set unreasonable targets for American students, punish schools, and result in teachers being fired if their students underperform, unfairly branding those educators as failures. She warns that major foundations, individual billionaires, and Wall Street hedge fund managers are encouraging the privatization of public education, some for idealistic reasons, others for profit. Many who work with equity

funds are eyeing public education as an emerging market for investors. *Reign of Error* begins where *The Death and Life of the Great American School System* left off, providing a deeper argument against privatization and for public education, and in a chapter-by-chapter breakdown, putting forth a plan for what can be done to preserve and improve it. She makes clear what is right about U.S. education, how policy makers are failing to address the root causes of educational failure, and how we can fix it. For Ravitch, public school education is about knowledge, about learning, about developing character, and about creating citizens for our society. It's about helping to inspire independent thinkers, not just honing job skills or preparing people for college. Public school education is essential to our democracy, and its aim, since the founding of this country, has been to educate citizens who will help carry democracy into the future.

Economization of Education Routledge

Winner of the AESA 2017 Critics' Choice Book Award *Mathematics Education* offers both undergraduates and starting-graduate students in education an introduction to the connections that exist between mathematics and a critical orientation to education. This primer shows how concepts like race, class, gender, and language have real effects in the mathematics classroom, and prepares current and future mathematics teachers with a more critical math education that increases accessibility for all students. By refocusing math learning towards the goals of democracy and social and environmental crises, the book also introduces readers to broader contemporary school policy and reform debates and struggles. Mark Wolfmeyer shows future and current teachers how critical mathematics education can be put into practice with concrete strategies and examples in both formal and informal educational settings. With opportunities for readers to engage in deeper discussion through suggested activities, *Mathematics Education's* pedagogical features include: Study Questions for Teachers and Students Text Boxes with Examples of Critical Education in Practice Annotated List of Further Readings Glossary

The Politics of American Education Routledge

"Utopian in theme and implication, this book shows how the practices of critical, interpretive inquiry can help change the world in positive ways.... This is the promise, the hope, and the agenda that is offered."--Norman K. Denzin, From the Foreword "Its focus on learning, education and pedagogy gives this book a particular relevance and significance in contemporary cultural studies. Its impressive authors, thoughtful structuring, wide range of perspectives, attention to matters of educational policy and

practice, and suggestions for transformative pedagogy all provide for a compelling and significant volume."--H. Svi Shapiro, University of North Carolina-Greensboro Distinguished international scholars from a wide range of disciplines (including curriculum studies, foundations of education, adult education, higher education, and consumer education) come together in this book to explore consumption and its relation to learning, identity development, and education. Readers will learn about a variety of ways in which learning and education intersect with consumption. This volume is unique within the literature of education in its examination of educational sites - both formal and informal - where learners and teachers are resisting consumerism and enacting a critical pedagogy of consumption.

The Business of Education Routledge

The Business of Education—a comprehensive view of how education policy is made in the US and, in some cases, globally—analyzes and critiques the influence of educational policy networks in a wide range of contexts and from a variety of perspectives, including testing, college preparation, juvenile detention centers, special education, the arts, teacher evaluation systems, education of undocumented immigrants, college faculty preparation, and financial aid. A network chart in most chapters illustrates how the major political actors, mainly private philanthropic foundations, for-profit companies, government officials, and politicians involved in the network, are linked. Joel Spring, internationally renowned scholar and analyst of educational policy, situates and frames the network studies in an introduction discussing general theories of education policy networks.

An Introduction Routledge

Following the epic, contentious 2016 presidential election, Joel Spring's ongoing documentation and analysis of political agendas for education reflect the major political issues since 2012. Here he examines the 2016 education planks of the Republican, Democratic, Libertarian, and Green Parties, using their official platforms and other statements, speeches given by each candidate, and media reports and publications. Each party's position is linked to previous political movements in education. Spring offers an alternative agenda for American schools, including a proposed education amendment to the U.S. Constitution and replacing human capital agendas with goals

emphasizing education for a long life and happiness. Taking a fresh look at the social and political forces, educational research, and ideologies shaping their educational agendas and a comparative approach, the book stimulates reflection and discussion. Updates and changes in the Sixth Edition: Betsy DeVos's education agenda supporting vouchers, free market competition and for-profit schools and its relationship to the education section of the 2016 Republican platform The important role religion and culture played in the evolution of Republican education policies after the school prayer and Bible decisions of the 1960s The influence of human capital economics on Democratic education proposals How No Child Left Behind and Democratic President Barack Obama opened doors to the growth of the for-profit education industry and investment bankers The 2016 Democratic positions on the cost of higher education and student loan debts The Democratic left as represented by the 2016 campaign of Democrat Bernie Sanders and his influence on the presidential candidate Hillary Clinton and the Democratic Party platform The education proposals of the Green and Libertarian parties

THE INTERSECTION OF CULTURES

Routledge

Joel Spring's history of school polices imposed on dominated groups in the United States examines the concept of deculturalization—the use of schools to strip away family languages and cultures and replace them with those of the dominant group. The focus is on the education of dominated groups forced to become citizens in territories conquered by the U.S., including Native Americans, Enslaved Africans, Chinese, Mexicans, Puerto Ricans, and Hawaiians. In 7 concise, thought-provoking chapters, this analysis and documentation of how education is used to change or eliminate linguistic and cultural traditions in the U.S. looks at the educational, legal, and social construction of race and racism in the United States, emphasizing the various meanings of "equality" that have existed from colonial America to the present. Providing a broader perspective for understanding the denial of cultural and linguistic rights in the United States, issues of language, culture, and deculturalization

are placed in a global context. The major change in the 8th Edition is a new chapter, "Global Corporate Culture and Separate But Equal," describing how current efforts at deculturalization involve replacing family and personal cultures with a corporate culture to increase worker efficiency. Substantive updates and revisions are made throughout all other chapters
Globalization of Education UCL Institute of Education Press (University College London Institute of Education Press)
First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

THE ACADEMY IN CRISIS

Routledge

This brief, interpretive history of American schooling focuses on the evolving relationship between education and social change. Like its predecessors, this new edition adopts a thematic approach, investigating the impact of social forces such as industrialization, urbanization, immigration, globalization, and cultural conflict on the development of schools and other educational institutions. It also examines the various ways that schools have contributed to social change, particularly in enhancing the status and accomplishments of certain social groups and not others. Detailed accounts of the experiences of women and minority groups in American history consider how their lives have been affected by education, while "Focal Point" sections within each chapter allow the reader to hone in on key moments in history and their relevance within the broader scope of American schooling from the colonial era to the present. This new edition has been comprehensively updated and edited for greater readability and clarity. It offers a revised final chapter, updated to include recent change in education politics and policy, in particular the decline of No Child Left Behind and the impact of the Common Core and movements against it. Further additions include enhanced coverage of colonial and early post-colonial American schooling, added materials on persistent issues such as race in education, an updated discussion of the GED program, and a closer look at the role of technology in schools. With its nuanced treatment of both historical and contemporary factors influencing the modern school system, this book remains an excellent resource for investigating and critiquing the social, economic, and cultural development of American education.

Whose Knowledge Counts in Government Literacy Policies?

Routledge

In this timely, cogent analysis of trends and powerful forces shaping global educational policy today, Joel Spring focuses on how economization is making economic growth and increased productivity the main goals of schools, and the ways these goals are achieved—including measuring educational policies by their costs and economic benefits, shaping family life to ensure productive workers and high-achieving students, introducing entrepreneurship education into curricula from preschool through higher education, and increasing the involvement of economists in educational policy analysis. Close attention is given to the Organization for Economic Cooperation and Development (OECD),

the World Bank, the World Economic Forum, and multinational corporations, which, as advocates of economization, want schools to focus on teaching hard and soft skills needed by the global labor market. Economization raises questions about the effects of economically driven agendas for schools: Will education policies

advocated by global organizations and multinational businesses corporatize and standardize human personalities and families? What type of global worker is being sought by global organizations and multinational corporations? What education programs are supported to educate the ideal global worker? What

is the ideal family life for economic growth and development? Detailing and analyzing the politics and motivations driving economization, the book concludes with an assessment of the impacts of the confluence of business interests, economic theories, governments, and educators.
