Architecture and the Novel under the Italian Fascist Regime discusses the relationship between the novel and architecture during the Fascist period in Italy (1922-1943). By looking at two profoundly diverse aesthetic phenomena

within the context of the creation of a Fascist State art, Billiani and Pennacchietti argue that an effort of construction, or reconstruction, was the main driving force behind both projects: the advocated "revolution" of the novel form (realism) and that of architecture (rationalism). The book is divided into seven chapters, which in turn analyze the interconnections between the novel and architecture in theory and in practice. The first six chapters cover debates on State art, on the novel and on architecture, as well as

their historical development and their unfolding in key journals of the period. The last chapter offers a detailed analysis of some important novels and buildings, which have in practice realized some of the key principles articulated in the theoretical disputes.

Because of Galileo's courageous campaign to change the methods of doing science, physicist Albert Einstein called him "the father of modern physics--indeed, of modern science altogether." A devout Catholic who wanted the church to maintain its authority and wisdom, Galileo worked tirelessly to persuade the church authorities to stop insisting that the sun revolved around a stationary earth, when there was evidence to prove otherwise. Galileo's persistence led to the Inquisition trying and sentencing him for heresy in 1633.

Work is constantly reshaped by technological progress. New ways of production are adopted, markets expand, and societies evolve. But some changes provoke more attention than others, in part due to the vast uncertainty involved in making predictions about the future. The 2019 World Development Report will study how the nature of work is changing as a result of advances in technology today. Technological progress disrupts existing systems. A new social contract is needed to smooth the transition and guard

against rising inequality. Significant investments in human capital throughout a person's lifecycle are vital to this effort. If workers are to stay competitive against machines they need to train or retool existing skills. A social protection system that includes a minimum basic level of protection for workers and citizens can complement new forms of employment. Improved private sector policies to encourage startup activity and competition can help countries compete in the digital age. Governments also need to ensure that firms pay their fair share of taxes, in part to fund this new social contract. The 2019 World Development Report presents an analysis of these issues based upon the available evidence.

## **MECÁNICA VECTORIAL PARA INGENIEROS. DINÁMICA**

Cambridge University Press

The book is intended as an advanced undergraduate or first-year graduate

course for students from various disciplines, including applied mathematics, physics and engineering. It has evolved from courses offered on partial differential equations (PDEs) over the last several years at the Politecnico di Milano. These courses had a twofold purpose: on the one hand, to teach students to appreciate the interplay between theory and modeling in problems arising in the applied sciences, and on the other to provide them with a solid theoretical background in numerical methods, such as finite elements.

Accordingly, this textbook is divided into two parts. The first part, chapters 2 to 5, is more elementary in nature and focuses on developing and studying basic problems from the macro-areas of diffusion, propagation and transport, waves and vibrations. In turn the second part, chapters 6 to 11, concentrates on the development of Hilbert spaces methods for the variational formulation and the analysis of (mainly) linear boundary and initial-boundary value problems.

Modern Quantum Mechanics is a classic graduate level textbook, covering the main quantum mechanics concepts in a clear, organized and engaging manner. The author, Jun John Sakurai, was a renowned theorist in particle theory. The second edition, revised by Jim Napolitano, introduces topics that extend the text's usefulness into the twenty-first century, such as advanced mathematical techniques associated with quantum mechanical calculations, while at the same time retaining classic developments such as neutron interferometer experiments, Feynman path integrals, correlation measurements, and Bell's inequality. A solution manual for instructors using this textbook can be downloaded from [www.cambridge.org/9781108422413](http://www.cambridge.org/9781108422413).

### **Digital Skills and Life-long Learning: Digital Learning as a New Insight of Enhanced Learning by the Innovative Approach Joining Technology and Cognition**

World Bank Publications  
This is an introductory and self-contained book for eager students of applied

mathematics and engineering, who want to have a tasting of the beautiful mathematics lying at the root of the design of control algorithms and strategies for linear dynamical systems. All it takes is the interest and fondness for the logical reasoning, together with the mastery of a few concepts from real and complex mathematical analysis and linear algebra. The control design is presented before the reader's eyes in order to involve him intellectually and emotionally. The purpose is to really and exclusively reveal the logical steps underlying the control design and, at the same time, to educate in the most charming intellectual independence. Applications in Matlab-Simulink and Maple provide substance to the theoretical concepts, while graphics render the reader more pleasant.

Recently, technology and aging have been key research areas in human cognition. The Research Topic "Digital Skills and Life-long Learning: Digital Learning as a New Insight of Enhanced Learning by the Innovative Approach Joining Technology

and Cognition” investigated technology's impact on cognitive and intellectual processes, highlighting how intensively technology can change and/or enhance the cognitive functioning throughout one's lifespan. The aim of this Research Topic was to provide an outlook through multidisciplinary research and development while addressing the dynamic intersection of cognition, mind, and technology. Our scope was 1) to favor the cognitive technology debate, 2) to overcome the dichotomies of technology and psychology, 3) to emphasize the advances in knowledge and well-being. This Research Topic comprises review studies and original articles, focused on digital skills that enhance human potential. Transversal approaches and cross-sectorial analysis were encouraged, leading to investigation areas related to cognitive and mental processing—in educational, rehabilitation, clinical settings—across aging. Articles of high relevance to the Research Topic were submitted on the subjects of a) research in human performance and human factors, b) new research and technologies addressing the needs of a growing populace, and c)

cognitive aging and cognitive rehabilitation research.

A straightforward guide to logic concepts  
Logic concepts are more mainstream than you may realize. There's logic every place you look and in almost everything you do, from deciding which shirt to buy to asking your boss for a raise, and even to watching television, where themes of such shows as CSI and Numbers incorporate a variety of logistical studies. Logic For Dummies explains a vast array of logical concepts and processes in easy-to-understand language that make everything clear to you, whether you're a college student or a student of life. You'll

find out about: Formal Logic Syllogisms Constructing proofs and refutations Propositional and predicate logic Modal and fuzzy logic Symbolic logic Deductive and inductive reasoning Logic For Dummies tracks an introductory logic course at the college level. Concrete, real-world examples help you understand each concept you encounter, while fully worked out proofs and fun logic problems encourage you students to apply what you've learned.

The eagerly awaited English translation of Kaddour's award-winning novel of clashing cultures during the French colonial years Gather together French colonialists, young nationalists eager for independence, and local Maghreb leaders in a small North African city of the 1920s. Bring a collection of brash American filmmakers and celebrities into the picture. Dangerous cultural collisions are the inevitable result in Hédi Kaddour's best-selling novel of French colonial rule and its persisting legacy of human chaos and cultural tragedy. In this commanding novel, the author plumbs the contradictions of colonialism and the impact on individual lives. With insight, humor, and a profound sense of irony he introduces Les Prépondérants—"The Preponderants," an unofficial group of peddlers of influence who operate at every level of colonial society. American "Hollywood" values, Islamic and secular politics, French manners—none of them escapes

Kaddour's skewering wit. Filled with rich irony and wonderful characters, this is a novel that grapples forcefully with colonial relations in the Arabic, North African, and French worlds, while also journeying into the simmering Europe and United States of the Roaring Twenties.

It is well-known that the topic of composite materials affects many engineering fields, such as civil, mechanical, aerospace, automotive and chemical. In the last decades, in fact, a huge number of scientific papers concerning these peculiar constituents has been published. Analogously, the industrial progress has been extremely noticeable. The study of composite materials, in general, is a challenging activity since the advancements both in the academia and in the industry provide continually new sparks to develop innovative ideas and applications. The communication, the

sharing and the exchange of views can surely help the works of many researchers. This aspect represents the main purpose of this Conference, which aims to collect high-level contributions on the development and the application of composite materials. The establishment of this 21st edition of International Conference on Composite Structures has appeared appropriate to continue what has been begun during the previous editions. ICCS wants to be an occasion for many researchers from each part of the

globe to meet and discuss about the recent advancements regarding the use of composite structures, sandwich panels, nanotechnology, bio-composites, delamination and fracture, experimental methods, manufacturing and other countless topics that have filled many sessions during this conference. As a proof of this event, which has taken place in Bologna (Italy), selected plenary and key-note lectures have been collected in the present book.
