Every industry will be positively affected by blockchain and AI technology at some point. However, blockchain is a misunderstood technology within the publishing realm. The scholarly publishing industry can significantly improve the flow of research, drive down costs, and introduce new

efficiencies in the publishing industry with these new technologies. The scholarly publishing industry is in its early days of the digital transformation, and blockchain and AI technology could play a major role in this. However, the industry has been resistant to change. These reasons include but are not limited to staying with legacy systems, cost of new platforms, changing cultures, and understanding and adopting new technologies. With proper research and information provided, the publishing industry can adopt these technologies for beneficial advancements and the generation of a bright future. Transforming Scholarly Publishing With Blockchain Technologies and AI explores the changing landscape of scholarly publishing and how blockchain technologies and AI are slowly being integrated and used within the industry. This book covers both the benefits and challenges of implementing technology and provides both cases and new developments. Topics highlighted

include business model developments, new efficiencies in scholarly publishing, blockchain in research libraries, knowledge discovery, and blockchain in academic publishing. This book is a valuable reference tool for publishers, IT specialists, technologists, publishing vendors, researchers, academicians, and students who are interested in how blockchain technologies and AI are transforming and developing a modern scholarly publishing industry.

This work argues that current cryptocurrency regulation, particularly in the areas of enforcement

and compliance, is inadequate. It proposes reflexive regulation as an alternative approach. This book provides strategies for a reflexive regulation approach to cryptocurrencies, developed through the identification of the internal self-regulatory mechanisms of the cryptocurrency system. Apportioning blame for current problems to the regulators' failure to take into account the inherent technical features of cryptocurrencies, the work promotes reflexive regulation in which the law acts at a subsystem-specific level to install, correct, and redefine democratic self-regulatory mechanisms. It provides strategies for this approach, developed through the identification of the internal self-regulatory mechanisms of the cryptocurrency system. These are identified as imbedded in the technical functionality of computer code and consensus-based distributive governance mechanisms respectively. In addition to providing a technical, historical and legal overview of cryptocurrencies, the book concludes by providing recommendations aimed at redirecting code and consensus towards achieving regulatory goals. In this way, it draws from the theory of reflexive law, in order to provide both a substantive and jurisprudential perspective on the regulation of cryptocurrencies and to illustrate how Financial Technology (Fintech) regulation can only be effective once regulators consider both the 'Fin' and the 'tech' in their regulatory approaches. The book will be of interest to researchers, academics and policy-makers working in the areas of Financial Regulation and Jurisprudence, Financial Crime, Banking Regulation, Information Systems, and Information Technology.

This is the first dedicated book to be published on computer-aided General Morphological Analysis (GMA) as a non-quantified modelling method. It presents the history and theory of GMA and describes how it is used to develop interactive, non-quantified inference models. Eleven case studies are presented out of more than 100 projects carried out since 1995, illustrating how GMA has been employed for structuring complex policy and planning issues, developing scenario and strategy laboratories, and analysing organisational and stakeholder structures. Also discussed are the concepts of "wicked problems" and "social messes", their characteristics and treatment, and problems concerning the facilitation of morphological analysis workshops.
