This book contrasts authentic approaches to education with classroom practices based primarily on standards external to the individuals who are supposed to learn. While other books tend to promote either a desperate scramble for meeting standards or determined resistance to neoliberal reforms, this book fills that gap in ways that will inspire practitioners, prospective teachers, and teacher educators. Mandates pay only lip service to constructivist and social constructivist principles while thwarting the value of both students and teachers actively creating understandings. Authors in this book assert the central importance of a range of constructivist approaches to teaching, learning, and thinking, inviting careful reflection on the goals and values of education.

What we can do when there's no plan B. Based on the hit ABC series - don't leave earth without it Most Australians accept that climate change is real. However, many of us don't know what we can do about it and feel powerless about how to make a difference. In *Fight for Planet A*, the book of the hugely popular 3-part ABC series of the same name, presenter Craig Reucassel explores solutions and practical day-to-day changes that each and every one of us can make to reduce our carbon footprint and help minimise the impact of climate change. Looking at our relationship with food, energy and transport, the former Chaser comedian

and presenter of the enormously popular *War on Waste ABC* series demonstrates the scale of the problem and a myriad of solutions in ways that are entertaining, informative, emotionally engaging and, best of all, easy to understand. *Fight for Planet A* will contain far more info than the show: one problem Reucassel encountered while making the series was how much he had to leave out.
