In the highly popular MACS-Lift Short-Scar Rhytidectomy, Drs. Patrick Tonnard and Alexis Verpaele introduced surgeons to an exciting new concept in facial rejuvenation—one that offered shorter incisions, minimal morbidity, and reduced recovery time. In this companion volume, Short-Scar Face Lift: Operative Strategies and Techniques, Drs. Tonnard and Verpaele build on that foundation and expand their scope. The book is organized into two sections. Part I, Short-Scar Face-Lift Techniques, discusses indications, applications, and alternate short-scar face-lift techniques. The editors elaborate on the different aspects of the MACS-lift and short-scar face-lifting. They review the important lessons they have learned during years of experience with the MACS-lift, including a discussion of complications, problems, limitations, and technical tips and tricks. They are joined by Dr. Foad Nahai, who discusses technical considerations; Dr. Joseph Hunstad, who provides a systematic step-by-step guide to his approach; Dr. Mark Jewell, who describes the

biomechanics of the MACS-lift and offers technical tips for success; and Dr. Daniel Baker, who describes his personal lateral SMASectomy short-scar face-lift technique and compares it to other comparable and convergent techniques. Part II focuses on Combined Approaches and Ancillary Treatments for facial rejuvenation. In this section, Dr. Daniel Labb discusses the anatomic basis of minimally invasive neck correction through a short scar and Dr. Alain Fogli details his simple, safe technique for temporal lifting. Finally, Dr. Thomas Roberts brings all of these techniques and treatments into perspective through his analysis of the volumetric concept of facial rejuvenation. He provides an in-depth discussion of facial fat micrografting and describes how the synergistic use of multiple surgical and nonsurgical modalities can lead to superior results. With beautiful, four-color illustrations, numerous case examples, and an accompanying DVD with operative videos, this book provides the ultimate surgical instruction that will allow surgeons to incorporate this procedure into their practice.

This comprehensive guide to the Star Wars series of films follows on from the re-release of the first three films. Everything from the smugglers' spaceport on Abregado-Rae and technical explanations of the Millennium Falcon's acceleration compensator is covered.

Love and Sex in Islam Springer Science & Business Media

Everything you wanted to know about sex and love in Islam, but were hesitant to ask about: polygamy, contraception allowed by Sharia, oral and group sex, homosexual marriages and also the relationship with jinns, masturbation and mysteries of martial relations - all that is allowed and all that is prohibited in sexual relations in this noble and pure religion. Many people both in the West and Russia continue to have a mistaken illusion that love, sex and variability of relations between man and woman are either suppressed in Islam or in contrary exceed all norms of decency. The book is an insight into this matter. The Muslim man is perceived as an ideal type of an always ready sexual partner. Love and Sex in Islam lifts the veil covering the delicate theme, in which the phenomena seeming incompatible turn out to be good neighbors.

Although scientific models and simulations differ in numerous ways, they are similar in so far as they are posing essentially philosophical problems about the nature of representation. This collection is designed to bring together some of the best work on the nature of representation being done by both established senior philosophers of science and younger researchers. Most of the pieces, while appealing to existing traditions of scientific

representation, explore new types of questions, such as: how understanding can be developed within computational science; how the format of representations matters for their use, be it for the purpose of research or education; how the concepts of emergence and supervenience can be further analyzed by taking into account computational science; or how the emphasis upon tractability--a particularly important issue in computational science--sheds new light on the philosophical analysis of scientific reasoning.

Policing Hate Crime Indiana University Press

Pre-crime aims to pre-empt 'would-be-criminals' and predict future crime. Although the term is borrowed from science fiction, the drive to predict and pre-empt crime is a present-day reality. This book critically explores this major twenty-first century development in crime and justice. This first in-depth study of pre-crime defines and describes different types of pre-crime and compares it to traditional post-crime and crime risk approaches. It analyses the rationales that underpin pre-crime as a response to threats, particularly terrorism, and shows how it is spreading to other areas. It also underlines the historical continuities that prefigure the emergence of pre-crime, as well as exploring the new technologies and forms of surveillance that claim the ability to predict crime and identify future criminals. Through the use of examples and case studies it provides insights into how pre-crime generates the crimes it purports to counter, providing compelling evidence of the problems that arise when we act as if we know the future and aim to control it through punishing, disrupting or incapacitating those we predict might commit future crimes. Drawing on literature from criminology, law, international

relations, security and globalization studies, this book sets out a coherent framework for the continued study of pre-crime and addresses key issues such as terminology, its links to past practises, its likely future trajectories and its impact on security, crime and justice. It is essential reading for academics and students in security studies, criminology, counter-terrorism, surveillance, policing and law, as well as practitioners and professionals in these fields.

In southeast Africa, the power to heal is often associated with crossing borders, whether literal or metaphorical. This wide-ranging volume reveals that healers, whose power depends on the ability to broker therapeutic resources, also contribute to the construction of the borders they transgress. While addressing diverse healing practices such as herbalism, razor-blade vaccination, spirit possession, prophetic healing, missionary health clinics, and traumatic storytelling, the nine lively and provocative essays in *Borders and Healers* explore the creativity and resilience of the region's healers and those they heal in a world shaped by economic stagnation, declining state

commitments to health care, and the AIDS pandemic. This important book contributes to understandings of the ways in which healing practices in southeast Africa mediate divides between the wealthy and the impoverished, the traditional and the modern, the local and the global.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

This book highlights a set of selected, revised and extended papers from the 7th International Conference on Simulation and Modeling Methodologies, Technologies and Applications (SIMULTECH 2017), held in Madrid, Spain, on July 26 to 28, 2017. The conference brought together researchers, engineers and practitioners whose work involves methodologies in and applications of modeling and simulation. The papers showcased here represent the very best papers from the Conference, and report on a broad range of new and innovative solutions.

Infectious Disease Epidemiology provides a concise reference for practicing epidemiologists, and provides trainee readers with a thorough understanding of basic the concepts which are critical to understanding specialist areas of infectious disease

epidemiology. Divided into two sections, part one of the book covers a comprehensive list of methods relevant to the study of infectious disease epidemiology, organised in order of increasing complexity, from a general introduction, to subjects such as mathematical modelling and sero-epidemiology. Part two addresses major infectious diseases that are of global significance due to their current burden or their potential for causing morbidity and mortality. The examples have been selected and grouped into chapters based on the route of transmission. This practical guide will be essential reading for postgraduate students in infectious disease epidemiology, health protection trainees.

The identification of normal and breast cancer stem cells has offered a new vision of this heterogeneous disease and new hopes for its prognosis and treatment. This volume provides an overview of recent developments in mammary stem cell research and discusses the many varieties of approaches used by researchers to investigate the properties and functions of mammary stem cells. The beginning chapters provide readers with an introduction to mammary stem cells, and the processes used to characterize stem cells and isolate them via fluorescent activated cell sorting. The next few chapters discuss DNA and mRNA sequencing, proteomic techniques to help profile cells, lentiviral cell transduction for gene expression, and in vivo lineage tracing. The final few chapters are dedicated to following stem cells from their initial niche to the new microenvironment at their metastasis site, and to studying these cells using physical and mathematical approaches. Written in the highly successful

Methods in Molecular Biology series format, the chapters include the kind of detailed description and implementation advice that is crucial for getting optimal results in the laboratory. Authoritative and cutting-edge, *Mammary Stem Cells: Methods and Protocols* aims to help members of the scientific community explore the behavior of stem cells and how to work with them in order to guide the design of new and complimentary strategies to be applied in the clinic with the ultimate end goal of fighting breast cancer.

A bored Websurfer encounters a Dutch student who dreams of being enslaved by Arab men. The story of Dutchmeat's quest is not for the faint of heart. There are no velvet handcuffs here, just a hair-raising trip down the rabbit hole to a place most people don't know exists. Not since the Barbary pirates enslaved hapless Europeans in the 17th Century has a story like this been told.

The Mapping of Africa systematically categorizes and provides an overview of all printed maps showing the entire African continent published from 1508 to 1700. The author has undertaken a review of the literature, conducted an exhaustive investigation in many major libraries and private collections, analyzed these findings, and then compiled information on 174 distinctly separate maps of the African continent. The Introduction contains information about the mapping of Africa before 1508, important world maps which include Africa, and a presentation of the major cartographic models developed for this book. Richly illustrated in full color. Volume 7 in the *Utrechtse Historisch-Cartografische Studies*.

Mitochondria play an increasingly central role in the context of cellular physiology. These organelles possess their own genome (mtDNA), which is functionally coordinated with the nuclear genome. Mitochondrial gene expression is mediated by molecular processes (replication, transcription, translation, and assembly of respiratory chain complexes) that all take place within the mitochondria. Several aspects of mtDNA expression have already been well characterized, but many more either are under debate or have yet to be discovered. Understanding the molecular processes occurring in mitochondria also has clinical relevance. Dysfunctions affecting these important metabolic 'hubs' are associated with a whole range of severe disorders, known as mitochondrial diseases. In recent years, significant progress has been made to understand the pathogenic mechanisms underlying mitochondrial dysfunction; however, to date, mitochondrial diseases are complex genetic disorders without any effective therapy. Current therapeutic strategies and clinical trials are aimed at mitigating clinical manifestations and slowing the disease progression to improve the quality of life of patients. The goal of the Special Issue 'Mitochondria: from Physiology to Pathology' published in *Life* (ISSN: 2075-1729) was to collect research and review articles covering the physiological and pathological aspects related to mtDNA maintenance and gene expression, mitochondrial biogenesis, protein import, organelle metabolism, and quality control.

In a contemporary setting of increasing social division and marginalisation, *Policing Hate Crime* interrogates the complexities of prejudice motivated crime and effective policing practices. Hate crime has become a barometer for contemporary police relations with vulnerable and marginalised communities. But how do police effectively lead conversations with such communities about problems arising from prejudice? Contemporary police are expected to be active agents in the pursuit of social justice and human rights by stamping out prejudice and group-based animosity. At the same time, police have been criticised in over-policing targeted communities as potential perpetrators, as well as under-policing these same communities as victims of crime. Despite this history, the demand for impartial law enforcement requires police to change their engagement with targeted communities and kindle trust as priorities in strengthening their response to hate crime. Drawing upon a research partnership between police and academics, this book entwines current law enforcement responses with key debates on the meaning of hate crime to explore the potential for misunderstandings of hate crime between police and communities, and illuminates ways to overcome communication difficulties. This book will be important reading for students taking courses in hate crime, as well as victimology, policing, and crime and community.

The First Conference on materials science and engineering, including physics, physical chemistry, condensed matter chemistry, and technology in general, was held in September 1995, in Herceg Novi. An initiative to establish Yugoslav Materials Research Society was born at the conference and, similar to other MR societies in the world, the programme was made and objectives determined. The Yugoslav Materials Research Society (Yu-MRS), a nongovernment and non-profit scientific association, was founded in 1997 to promote multidisciplinary goal-oriented research in materials science and engineering. The main task and objective of the Society has been to encourage creativity in materials research and engineering to reach a harmonic coordination between achievements in this field in our country and analogous activities in the world with an aim to include our country into global international projects. Until 2003, Conferences were held every second year and then they grew into Annual Conferences that were traditionally held in Herceg Novi in September of every year. In 2007 Yu-MRS formed two new MRS: MRS-Serbia (official successor of Yu-MRS) and MRS-Montenegro (in founding). In 2008, MRS - Serbia became a member of FEMS (Federation of European Materials Societies).

Bacterial diarrheal diseases remain an important leading cause of preventable death, especially among children under five in developing countries. In the American continent, diarrheal disease and other health complications caused by *Escherichia coli*

constitute a major public health problem, and, therefore, several research groups have dedicated their effort to understand this pathogen and provide feasible solutions to prevent, treat and reduce E. coli infections. The Latin American Coalition for Escherichia coli Research (LACER) was created as a multidisciplinary network of international research groups working with E. coli with the ultimate goal of advancing understanding of E. coli, and to prepare the next generation of American E. coli investigators. As such, this book compiles the knowledge of these investigators about E. coli, a commensal bacteria living inside its host, and a pathogen causing disease in animals and humans. Escherichia coli in the Americas contains a series of 15 chapters written by experts, covering basic concepts regarding the different categories of E. coli, including their environmental niche, virulence mechanisms, host reservoir, and

disease outcomes, as well as diagnosis, vaccine development and treatment. This book's target audience include trainees and students learning about the basic and clinical aspects of E. coli pathogenesis, as well as experts around the globe who wish to learn more about this pathogen and the public health impact this bacteria has in America.

Recent developments in genetic engineering and protein chemistry are bringing ever more powerful means of analysis to bear on the study of enzyme structure. This volume reviews the most important types of industrial enzymes. In a balanced manner it covers three interrelated aspects of paramount importance for enzyme performance: three-dimensional protein structure, physicochemical and catalytic properties, and the range of both classical and novel applications.
