Organisations today are operating in an ever changing and more risky external business environment. To survive and grow in this environment it is now more important than ever that the information needs of the organisation are shaped by its goals and objectives and driven by its strategy choices. These strategy choices determine the processes and activities necessary to achieve the organisational objectives and goals. The resulting organisational outcomes contribute to the generation of owner wealth and increased organisational value and, in doing so, recognise the value adding potential of significant organisational relationships such as those with suppliers and customers. From a management accountant's perspective, these strategy choices define the design, function and operation of the organisation's management control systems and its underpinning performance management system. The focus of this book is on accounting for an organisation's external business environment and the associated risk implications for decision making and performance management. It is about accounting for operating strategies, processes and activities and the incorporation of risk into these strategic decisions and the management of performance. The tools, techniques and frameworks available to the management accountant are drawn from those used in traditional and contemporary management accounting, as well as those developed through a strategy-based value chain lens and a

discussion on how strategy-based accounting might be achieved.

MANAGERIAL ACCOUNTING

McGraw-Hill Education

Accounting for Decision Making and Control provides students and managers with an understanding appreciation of the strengths and limitations of an organization's accounting system, thereby allowing them to be more intelligent users of these systems. The Eighth Edition demonstrates that managerial accounting is an integral part of the firm's organizational architecture, not just an isolated set of computational topics. Managers in all organizations, throughout their professional careers, interact with their accounting systems as it is both a source of information for decision making and part of the organization's control mechanisms.

LEVEL 3 MANAGEMENT ACCOUNTING FOR DECISION MAKING 3.5 LEARNING WORKBOOK

Management Accounting for Decision Makers

This revised and updated fifth edition of Accounting for Managers builds on the international success of the previous editions in explaining how accounting is used by non-financial managers. Emphasizing the interpretation rather than the construction of accounting information, Accounting for Managers encourages a critical, rather than an unthinking acceptance of accounting techniques. Whilst immensely valuable for planning, decision-making and control, users of accounting information need to recognize the assumptions behind, and the limitations of particular accounting techniques. As in the previous editions, the book links theory with practical examples and case studies drawn from real business situations across a wide range of manufacturing, retail and service industries.
