On request, the IAEA performs comprehensive audits of

radiotherapy programmes to assess the whole process, including aspects such as organization, infrastructure and clinical and medical physics components. The objective of a comprehensive clinical audit is to review and evaluate the quality of all components of the practice of radiotherapy at the institution, including its professional competence, with a view to quality improvement. A multidisciplinary team, known as Quality Assurance Team in Radiation Oncology (QUATRO), comprising a radiation oncologist, a medical physicist and a radiation therapist, are required to carry out the audit. The present publication provides revisions of the QUATRO guidelines published in 2007, by incorporating new procedures relevant to newer technologies and modalities that have become routinely used in radiotherapy centres in the interim period.

MANUAL OF CRITICAL CARE NURSING - E-BOOK

John Wiley & Sons

Coverage of more than 75 disorders most commonly seen in progressive and critical care settings equips you with all the content needed to handle problems in critical care nursing. Consistent, easy-to-use format mirrors a practicing nurse's approach to patient care and facilitates quick reference to vital information. Diagnostic Tests tables highlight the definition,

purpose, and abnormal findings for each test. Gerontologic considerations and bariatric considerations are highlighted throughout to direct attention to patients with unique needs in critical care settings. NOC outcomes and NIC interventions apply standardized nursing taxonomies to the disorders and conditions most commonly encountered in progressive and critical care settings. Portable size makes it ideal for use on the unit or at the bedside. Safety Alert! and High Alert! boxes call attention to issues vital to patient safety.
