This book examines the national trend toward mayoral control of big-city school districts through comparative case studies of Chicago and Cleveland - two school districts that adopted mayoral control during the 1990s. Chambers takes up the question of whether granting control to mayors in major cities will indeed fix public school systems. She finds that although both cities have experienced noteworthy improvements in student performance since mayoral control, the increased centralization of decision-making has reduced minority participation in democratic politics. Chambers argues that this conundrum of improved performance at the cost of decreased minority participation could undermine the very democratic and civic values that schools try to teach. In a concluding chapter, she

offers several suggestions for better incorporating minority participation educational decisions, even while centralizing more power in mayors' offices.

"Amid widespread concern that schools are failing to prepare students for workforce participation, higher education, and the economic and technological challenges of the twenty-first century, public school reform efforts across the nation have focused increasingly on standards, performance, and accountability. A particularly critical question involves improving educational opportunities for children in poverty and for other ""at-risk"" students who represent an increasing proportion of public school enrollment. Education Policy for the 21st Century examines a range of key issues in standards-based education reform. Contributors focus on educational trends and issues in metropolitan Chicago, state education policy in Illinois, lessons of Chicago school reform, and standards-based, systemic reform in other states. The volume also includes chapters on standards and assessment in school accountability systems, effects of school spending on student achievement, and ""building-level"" obstacles to urban school reform. Presenting valuable data and a variety of perspectives, this book illuminates both the challenges and opportunities presented by standards-based education

reform."

The papers in this collection were commissioned by the Board on Testing and Assessment (BOTA) of the National Research Council (NRC) for a workshop held on November 14, 2001, with support from the William and Flora Hewlett Foundation. Goals for the workshop were twofold. One was to share the major messages of the recently released NRC committee report, *Knowing What Students Know: The Science and Design of Educational Assessment* (2001), which synthesizes advances in the cognitive sciences and methods of measurement, and considers their implications for improving educational assessment. The second goal was to delve more deeply into one of the major themes of that report—the role that technology could play in bringing those advances together, which is the focus of these papers. For the workshop, selected researchers working in the intersection of technology and assessment were asked to write about some of the challenges and opportunities for more fully capitalizing on the power of information technologies to improve assessment, to illustrate those issues with examples from their own research, and to identify priorities for research and development in this area.

Math Plus Reading Workbook Carson-Dellosa Publishing

Your child's summer partner in building grade 5 success! Summer Link Math plus Reading offers fourth-grade children skill-and-drill practice in key subject areas to help them get ready for fifth grade over the summer months. Aligned to state and national *Student Achievement in California Schools* John Wiley & Sons Originally published in 1974, this introductory text has been designed specifically for teachers in training, and it presents the basic psychological principles governing learning, perception, motivation and the retention of knowledge at the time. The text is carefully tailored for would-be teachers in its clear and informal style, and in its selective aspects of psychology which the teacher can use to advantage in his efforts to assist the child. The book has an eclectic approach to psychological theory, drawing upon the insights of behaviourism, perceptualism and the Gestalt school, as well as the developmental theories of Jean Piaget. The author discusses in some detail theories concerning the nature of intelligence, and the relationship between creativity and intelligence; and he investigates the dynamics of social adjustment, introducing the part that may be played by meditation in helping to solve some of the problems of emotional stress within the learning situation. In his consideration of the management of learning, the author lays much emphasis upon the importance of individual cognitive styles, individualizing instruction and independent learning. In one chapter Dr Mueller is concerned with factors in the measurement of personality and of performance in the classroom, and he reflects upon the specific problem of objectivity in such assessment. Finally, some consideration is given to the problems and characteristics of the socially disadvantaged child and to the role of the teacher in helping to solve some of the learning problems of these children.

Forensic mental health assessment (FMHA) continues to develop and expand as a specialization. Since the publication of the First Edition of *Forensic Mental Health Assessment: A Casebook* over a decade ago, there have been a number of significant changes in the applicable law, ethics, science, and practice that have shaped the conceptual and empirical underpinnings of FMHA. The Second Edition of *Forensic Mental Health Assessment* is thoroughly updated in light of the developments and changes in the field, while still keeping the unique structure of presenting cases, detailed reports, and specific teaching points on a wide range of topics. Unlike anything else in the literature, it provides genuine (although disguised) case material, so trainees as well as legal and mental health professionals can review how high-quality forensic evaluation reports are written; it features contributions from leading experts in forensic psychology and psychiatry, providing samples of work in their particular areas of specialization; and it discusses case material in the larger context of broad foundational principles and specific teaching points, making it a valuable resource for teaching, training, and continuing education. Now featuring 50 real-world cases, this new edition covers topics including criminal responsibility, sexual offending risk evaluation, federal sentencing, capital sentencing, capacity to consent to treatment, personal injury, harassment and discrimination, guardianship, juvenile commitment, transfer and decertification, response style, expert testimony, evaluations in a military context, and many more. It will be invaluable for anyone involved in assessments for the courts, including psychologists, psychiatrists, social workers, and attorneys, as well as for FMHA courses.

This correlational study examined the relationship of the 1994-1995 fifth grade Iowa Tests of Basic Skills (ITBS) scores to 1998-1999 ninth grade Tests of Academic Proficiency (TAP) scores. These students are presently 2001-2002 twelfth graders. The study also examined the 1994-1995 fifth grade Iowa Tests of Basic Skills scores as a predictor of student dropout. Total reading, total language/written expression, and total mathematics scores of both tests were analyzed. The population included a sample population of 1994-1995 fifth grade students and 1998-1999 ninth grade students from the same class of students. Student test scores were gathered from cumulative files at Olive Branch High School and Hernando High School in the Desoto County School District. Data analysis included Pearson Correlation Coefficient, an independent sample t-test, and discriminant analysis. Findings indicated a moderate relationship between the 1994-1995 fifth grade Iowa Tests of Basic Skills (ITBS) scores and the 1998-1999 ninth grade Tests of Academic Proficiency (TAP). It was also found that 1994-1995 Iowa Tests of Basic Skills (ITBS) scores could serve as a predictor of dropout. With this data, the researcher also tested the dropout predictability of the 1998-1999 ninth grade Tests of Academic Proficiency (TAP). A stronger prediction for dropout was found using ninth grade 1998-1999 Tests of Academic Proficiency (TAP)

scores.
